21. A serious defect in the present practice is the length of time required to effect any alteration in a rate. In view of the evidence on the point which has already been tendered, I need not dwell on the subject. I think that a period of four weeks for objections in the case of a first rate, and three weeks in the case of a proposal to vary, is sufficient. It should be possible to vary a rate within a period of from five to six weeks from the date of proposal to that of confirmation. I think, also, that in exceptional cases a Board should be empowered to bring a variation into force at once, without any period being allowed for objections. Such action could be safeguarded from abuse by requiring the sanction of the confirming authority to the exercise of the power. I may illustrate the class of case I have in mind by citing an application which was made in December, 1921, to the Hair, Bass and Fibre Trade Board by the workers' side for a reduction in the piece prices for hand-loom weavers, who are mostly homeworkers. They were in great distress owing to their inability to compete with the factories even at the very low rates already in operation, and they proposed a new scale of lower rates, and wished them brought into operation at once. The employers agreed, and also wished the rates to come into operation at once. Legally this could not be done under the existing powers of the Board. A similar situation arose when all parties on the Brush and Broom Board desired to alter the ratio of apprentices to journeymen in the Bone Brush section of the trade. There was no necessity at all in either of these cases to go through the tedious procedure of issuing a proposal and waiting for objections before giving effect to an alteration as to which everyone was agreed.

22. Another defect which I think should be removed arises from the inability of the Boards to give any practical effect to objections which may be lodged unless they issue a fresh proposal. Unless they adopt this course the only action a Board can take is to delete a rate altogether. This results in insufficient

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

account being taken of objections. The Minister on one occasion refused to allow a mistake of 1d. in one rate of a juvenile scale to be amended without a fresh proposal. Subject to such safeguards as may be considered necessary, I think that the Boards should have power, without re-proposing, to give effect to objections by amendment of their proposals.

V. THE SANCTIONS BEHIND TRADE BOARD RATES.

23. In my opinion State enforcement should be maintained, and I do not think that it should be restricted in respect of any rates or classes of workers.

Joint Industrial Councils, as at present constituted, have no sanction behind their determinations, and many of the Councils are of opinion that this is a serious handicap, and that they cannot carry out their work effectively until the force of law is given to their determinations. The possibility of this development was foreseen by the Whitley Committee (First Report, paragraph 21; Second Report, paragraph 15).

On the 18th March, 1921, the Association of Industrial Councils and Interim Reconstruction Committees passed the following resolution:—

"That this Association of Joint Industrial Councils and Interim Reconstruction Committees is strongly of opinion and recommends that legislation should at once be commenced by the Government to give the necessary power to the Ministry of Labour to make binding upon the whole of any industry any Wages Awards, or Agreements, or arrangements as to working hours and conditions made or confirmed by Joint Industrial Councils or Interim Reconstruction Committees if so requested by the Joint Industrial Council or Interim Reconstruction Committee concerned."

The recommendation of the Association combines the decisions of twenty-five Joint Industrial Councils and Interim Reconstruction Committees on the subject, and on the 20th September, 1921, the Association resolved to ask the Minister of Labour to receive a deputation on the question of obtaining legislation to give to such of the Joint Industrial Councils and Interim Reconstruction Committees as desired to possess them, compulsory powers to enforce their determinations.

24. One of the objections which I have heard raised on numerous occasions to Trade Board rates is that they are not effectively enforced, and, accordingly, those employers who pay them are at a disadvantage when compared with employers who do not. All good employers are anxious to pay proper wages to their workpeople, but are frequently unable to pay the rates they would like to pay, and feel they ought to pay, owing to the fact that their competitors are paying wages at lower rates. One of the great advantages of a universal enforceable rate is that it puts all employers on the same footing, and prevents the good employer from being under-cut by the bad employer.

25. To ensure adequate enforcement is very difficult, and apart from the practical and financial difficulties of creating a greatly increased inspectorate, constant and numerous prosecutions are undesirable on every ground. I feel that primarily the most effective sanction is organisation both of the employers and the workers, but I think the legal obligation and liability to penalties for default should be retained with regard to all rates prescribed by the Boards. So as to remove any possible doubt on the point, I think that a clear right to recover Trade Board rates by civil process should be conferred by statute upon the workers entitled to them. While the Irish Courts held that an individual worker was entitled to take proceedings before Justices to recover the minimum wage prescribed by the Agricultural Wages Board (*Buchanan v. Osborne* (1919), 2 I.R.; p. 52), I am not clear as to the right of the workers to sue in the Civil Courts for wages due under the Trade Boards Acts. The point so far has not been decided in any reported decision of the superior Courts.

26. With regard to the arrangements as to the control of the inspectorate and enforcement of orders. I agree with the whole of the recommendations contained in the Report dated 4th March, 1921, of the Committee on the Administration of the Trade Boards Acts.

VI. THE MINISTER'S POSITION AS THE RATE-CONFIRMING AUTHORITY.

27. I do not consider that the Minister of Labour, or any Minister, is a satisfactory confirming authority. I cannot see what advantage would be gained by substituting the Board of Trade for the Minister of Labour. I feel strongly that an industrial and not a political authority is required. So long as a Minister is the confirming authority, it is inevitable that people who disagree with his decisions will allege that political considerations have influenced his actions. I am not suggesting, and I have no reason to think, that such is the case, but the mischief is done if people believe it to be true, whether it is so or not.

I do not think that the present practice of deputations waiting on the Minister, or upon high officers of the Department, to urge reasons for and against the confirmation of rates, is at all satisfactory. I think it is most unsatisfactory. Each group is received and heard separately, and can say what they please without the other groups affected having any effective way of challenging statements which may be made. One of the difficulties with which Trade Boards are faced arises from the fact that they have to deal with so much hearsay evidence. The danger of this is lessened when others are present who can challenge and correct misstatements, but the danger of wrong decisions being taken upon unverified statements is very great under the procedure I have indicated, however careful the Department may be. Let me say at once that the greatest trouble and care is, in my experience, taken by the Department to ascertain the facts and do justice between competing claims.

28. I feel very strongly that some confirming authority is absolutely necessary

(i) To prevent action which is *ultra vires*.

(ii) As a check on hasty or ill-considered legislation.

(iii) To secure some measure of co-ordination in the rates in related trades.

(iv) For the protection of the consumer.

29. As I have already said, I think the confirming authority should be an industrial authority. There would appear to be only two alternatives:

(i) To utilise the services of the Industrial Court, or

(ii) To constitute a Central Trade Board Council.

I fear that the effect of making the Industrial Court the confirming authority of Trade Board orders would be

(i) To weaken the Boards by undermining their sense of responsibility. If this happened, the Boards would in effect become merely advisory bodies, and the real rate-fixing body would be the Court.

(ii) To emphasise the element of arbitration in the Trade Boards system at the expense of the legislative element. In effect it would transform the Trade Boards system into an elaborate procedure of compulsory arbitration. I do not think this would be satisfactory or desirable.

For these reasons I have come to the conclusion that the objections to which this suggestion is open are too serious to render it acceptable.

30. I think, therefore, that the best authority would be a Central Trade Board Council conceived somewhat on the lines of the Central Wages Committee for Scotland under the Corn Production Act, 1917. The Scottish District Wages Committee fixed wages, which were then required to be submitted for confirmation to the Central Wages Committee for Scotland before they became effective.

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

If this plan was adopted, the constitution, membership and powers of the Central Council would have to be very carefully considered. Obviously the Chairman should be a man of considerable standing and experience. The Council would be a confirming, not a rate fixing, authority, that is to say, the rates submitted should be confirmed unless good reason was shown why they should not be confirmed. The burden of proof should be on those objecting. The power of the Council should, I think, be confined to confirming a rate or referring it back for reconsideration by the submitting Board. Provision would have to be made to avoid prolonged delays. A right should be given to associations of employers or workpeople, and probably also to the Minister of Labour, to lodge an objection to the confirmation of a rate within fourteen days of the Board giving notice that they had fixed a rate. Notice might be given by publication of a notification to that effect in the London and Edinburgh Gazettes. If no notice of objection was lodged within the prescribed time, the Council would then proceed to examine the provisional order made by the Board, and if they saw no serious objection, would confirm it; otherwise they would refer it back for reconsideration by the Board, with a statement of their reasons for so doing. If an objection was lodged, the Council would appoint a date for hearing, and hear arguments for and against the confirmation of the order, and then confirm it or refer it back.

I am not unaware of the difficulties presented by such a scheme, but I think they could be overcome. The difficulty of members of the Council having to meet frequently and at short intervals could, I think, be got over by a rota system.

VII. THE NEED FOR APPOINTED MEMBERS.

31. In my opinion the appointed members are essential to the proper working of a Trade Board, and should be retained. It is obviously necessary that great care should be taken in selecting suitable people for the posts, and they should have a good general working knowledge of industrial conditions and practice. I think that the Boards should have some voice in the choice of the appointed members, and that the better plan would be to give them a right to veto a suggested appointment.

The happiest relations have always existed between the appointed members and both groups of representative members on the Brush and Broom and the Hair, Baa and Fibre Trade Boards.

32. My experience leads me to the conclusion that the appointed members, providing they have a good general knowledge of industrial conditions and practice, are of very considerable assistance to the representative members of the Trade Board. They can rarely, if ever, have sufficient knowledge of the particular trade to enable them to decide technical questions, but they can very often be of assistance to both sides in making suggestions. I may illustrate what I mean by an example of my experience on the Brush and Broom Board. As already stated, practically all the important determinations of this Board have been arrived at by agreement after full discussion, and our discussions have always been carried on at a very high level of efficiency. Where the appointed members have been of service is that they have been able to make, from time to time, useful suggestions drawn from their experience in other spheres of industrial administration. For example, while nobody but the representative members on the Brush Board could have framed and carried through the Apprenticeship Schemes adopted by the Board, the task was undertaken at the suggestion of the appointed members. Once the suggestion was made the representative members were quick to see its importance, and the task was carried through with great keenness and efficiency.

33. It has been proposed to the Committee that a single appointed member, as chairman, should replace the three or five appointed members under the present practice; or, alternatively, that the chairman should sit with, or have the power to call in, two assessors drawn from the trade concerned. In my opinion the

practice of having three appointed members is preferable to either of these proposals. It is a tremendous advantage to the chairman to have the assistance of two independent colleagues. It is often represented that the appointed members have no technical knowledge of the industry. While this is true when they are first appointed, it is not true as time goes on. They subsequently acquire, or should acquire, very considerable technical knowledge, and I think that the presence of three such persons, gradually acquiring in some measure a specialised knowledge of the industry with which they are associated, and possessing a good general knowledge of industrial and economic conditions, is of much greater assistance to the Board in coming to wise determinations than would be the case if the chairman was alone.

34. Neither do I favour the suggestion that the chairman should be assisted by two trade assessors. The suggestion savours too much of arbitration pure and simple.

I have had considerable experience of industrial arbitration, both as a sole arbitrator and sitting with assessors, and where arbitration is concerned I hold the view very strongly that a court composed of a chairman, possessing both legal knowledge and industrial experience, sitting with two or more assessors, is preferable in every way to a single arbitrator.

A Trade Board is not a Court of Arbitration. It is an industrial legislature. To introduce the principle of having a single chairman, with or without assessors, into the Trade Boards system, is to place an undesirable emphasis on the chairman's position as a final arbitrator rather than chairman of a legislative body whose prime object is to legislate by agreement. Moreover, I do not see that the assessors would add much to the information at present obtainable by the chairman from the discussions on the Board and in conference with representatives of the two sides.

35. As to the voting powers which should be accorded the appointed members: In my opinion they should be regarded not as arbitrators, but as members of the Board, and should have the same voting power as any other member of the Board. I think their presence is a check on hasty and ill-considered determinations, and in some cases might be very important for the protection of the consumer, although no necessity for such protection has manifested itself on any of the Boards with which I have been connected. So long as we have a competitive system I think the consumer has in that system adequate protection save in very exceptional circumstances. I think the presence of the appointed members, plus the existence of some confirming authority, which I consider essential, should afford adequate protection to the consumer in any exceptional circumstances which may arise.

It has been suggested that the voting power of appointed members should be restricted to fixing a minimum rate for the lowest grade of unskilled workers. I do not favour this proposal for the reasons given when discussing the question of limiting the jurisdiction of the Boards, but if it is adopted I would urge that it should be qualified by conferring upon the appointed members the power to vote if the exercise of this power was requested by both sides. A situation might arise, for instance, where the representative members had very nearly, but not quite, arrived at agreement as to a particular rate. There might be a difference of 1d. per hour one way or the other—I have known such a situation arise—and it would be deplorable if the economic interests of a whole class of workers were prejudiced owing to the breakdown of negotiations on a small margin of difference such as that. And it must be borne in mind that if the negotiations on a Trade Board are properly conducted, the final decision taken is nearly always upon a relatively small margin of difference. I am of opinion, however, that the voting power of the appointed members should not be restricted in the manner proposed. To so restrict it would be to

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

confine the powers of Boards, in many cases, to fixing rates, other than by complete agreement, to relatively small classes of workers, and would leave the great bulk of the operatives in the trade concerned unprotected by a minimum rate unless complete agreement could be attained between the two bodies of representative members, and such agreement would be most difficult to attain in those industries where such protection was most needed. It is in the less well organised trades that this protection is most needed, and it is precisely in those trades where the composition of the Board would render the attainment of agreement most difficult, at any rate in the initial and early stages of the Board's history. Moreover, although the appointed members may keep the decisive character of their voting power well in the background, the fact that it exists is constantly in the minds of representative members, and is, I think, often a potent factor in attaining agreement. If this factor was absent I am inclined to think that agreement, in many cases, would be more difficult to attain than it is at present. If the appointed members had no voting power, it would be very easy for a body of employers, accustomed in the past to pay undesirably low rates of wages, to effectively prevent other employers from making any improvement in the economic status of the people they employ.

VIII. PROVISION FOR SPECIAL LOCAL CONDITIONS.

36. I have already expressed the view that minimum rates, in the case of manufacturing and wholesale industries, should be fixed on a national basis, but some of the considerations which lead me to this conclusion in the case of manufacturing and wholesale trades do not apply or apply only to a limited extent in the case of retail distributive and making-up trades. The latter industries cater for a local custom, and the labour cost which they can carry is materially affected by the economic strength or weakness of the local market. The problems which are raised by this consideration are, however, I think, difficult, and, so far as the distributive trades are concerned, I do not feel that I am competent to express any opinion on the matter, as I have no experience of these trades. The only industries of which I have any knowledge which fall within the description of "retail" and "making-up" trades are the Laundry trade and the Retail Bespoke Tailoring trade. These two industries have this characteristic in common—they cater in the main for a local custom. I think, however, that in the retail and making-up trades special local conditions require careful consideration, and that differential rates for different districts may be found necessary or desirable.

On the Laundry Board from the commencement we made special provision to meet the case of emergency workers at seaports for workers whose employment was of a casual nature, and for workers employed in localities subject to considerable seasonal fluctuations. As I have already mentioned, we attempted to create a differential rate to apply within a definite area in and around London; no effect was, however, given to the proposal, as it proved in practice unworkable.

Considerable evidence has been given before the Committee by Mr. Adams and Mr. Gordon in support of the necessity for differential district rates in the Retail Bespoke Tailoring trade, and Mr. Adams stated that on two occasions the employers had made proposals for district rates, and on each occasion the motion had been lost because the Appointed Members had voted against the proposal. The Appointed Members voted against the proposals not because they were opposed to the establishment of district rates, but because, after giving very careful consideration to both the schemes proposed by the employers' side, they unanimously came to the conclusion that they were unworkable. The matter is still under consideration by the Board, and the

Appointed Members are rendering all the assistance they can to enable the Board to work out a practical scheme of differential rates by districts. The chief difficulty is that in the Retail Bespoke Tailoring trade the need for differentiation is rather between shops of different types catering for different classes of custom in the same town or place than between one district and another. The Board at the present time are seeking to devise means of getting over this difficulty.

37. All the Boards with which I have been associated have, after very careful consideration, decided against establishing, at any rate for the present, statutory District Committees under section 12 of the Act of 1909. The technicalities involved in working statutory District Committees are felt to give rise to difficulties which it is well to avoid. It would appear, moreover, that so far as it might be necessary to give effect to local conditions by establishing differential rates, the differentiation can be made equally as well, if not better, by a National Board, obtaining when necessary local evidence with regard to local conditions which require to be met. I am afraid that a scheme of autonomous local District Committees, such as that suggested by Mr. Adams and Mr. Gordon in their evidence before the Committee, would not in practice be found to work as smoothly as my colleagues seem to think. I think they would be very expensive. They would certainly require a permanent secretariat. This conclusion is warranted by the experience of the best Joint Industrial Councils and by the many examples which I have seen, and sometimes had to construe, of local agreements drawn up between bodies of employers and workers who have not had the advantage of a draftsman in settling the final form of the instruments in which their determinations are embodied. Great difficulty has arisen on the Retail Bespoke Tailoring Board owing to the unfortunate language in which the Board clothed their earlier determinations. I think, also, a permanent independent Chairman would be found to be necessary.

Of the actual working of statutory District Committees under the Trade Boards I cannot speak, as I have no experience of the working of such Committees.

IX. THE VALUE OF THE SPECIAL POWERS OF TRADE BOARDS IN REGARD TO JUVENILES.

38. In some respects the Trade Boards have greater power in relation to juveniles than to any other classes of workers. The Boards have power, under the Act of 1918, not only to fix minimum rates for young workers, but to fix rates for learners, and to prescribe such conditions to the payment of learners' rates as the Boards think necessary for securing the effective instruction of those persons in the particular trades. This power confers upon Trade Boards full control over the industrial training of young people entering the trades for which they are responsible. Accordingly, Trade Boards may have to consider (i) scales of minimum wages for juvenile workers pure and simple—that is to say, for all workers under the age at which the minimum wage for adult workers is fixed, usually, though not in all cases, 21 for men and 18 for women; (ii) rates for learners, and the conditions which ought to be attached to the payment of those rates; and (iii) rates and conditions for apprentices.

39. With regard to plain juvenile rates, I am of opinion that these rates should be based upon age, but if necessary the inexperience of late entrants can be met by a lower rate for a reasonable period sufficient to allow of the requisite experience being gained. Examples of such provision being made will be found in the order of the Laundry Board dated 5th December, 1921 (W. (10)), and in that of the Jute Board dated 3rd September, 1921 (J. (13)), and in the proposal of the latter Board issued on 10th November, 1921 (J. (15)). I am inclined to think that in some cases the qualifying period fixed for late entrants is not of sufficient length, and so militates

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

against their obtaining employment. This is a matter, however, which will, if necessary, be corrected as the Boards gain greater experience.

Juvenile rates should not start too high. There seems to be no good reason why the minimum wage payable to very young persons immediately on entry into industrial employment should necessarily be a full subsistence wage, but the rates should approximate more closely to full subsistence wages as the age advances, and a big jump in wage rates should be avoided at the point when adolescence merges into maturity. If care is not taken in this respect, there is a tendency on the part of some employers to employ young persons and to discharge them as soon as they attain an age which entitles them to the full rate, and the evil of blind-alley employment is thereby perpetuated. The increases in rates should take place at yearly or six-monthly periods, but it is well, I think, that the increases should take place not with reference to the worker's birthday but at fixed periods in the year, for instance, on the first Monday in January and July next after the worker attains the required age. Misunderstandings and mistakes are thus prevented and book-keeping simplified. This plan has been adopted, for example, in the proposals issued by the General Waste Materials Reclamation Trade Board.

The juvenile rates on the Brush and Broom Trade Board and the Hair, Bass and Fibre Trade Board were all reached by agreement.

40. As to learners' rates: The reasons which lead me to express the view that plain juvenile rates for the lower ages need not necessarily satisfy the standard of a full subsistence wage apply equally to learners' rates; but inasmuch as the form of condition generally adopted by Trade Boards for the payment of learners' rates, namely, "that the employer shall afford the learner reasonable facilities for such learning," places no definite obligation upon the employer to teach, I am not prepared to say that it applies more strongly. But in cases where circumstances require a distinction to be drawn between learners and plain juvenile workers, and the young people employed as learners do definitely obtain some substantial advantage with regard to training or industrial experience beyond that which they would obtain simply as plain juvenile workers, it is obvious that the plain juvenile scale should be slightly higher than that applicable to learners, so that an inducement may be thereby held out to the employer to employ the young people as learners rather than as plain juvenile workers. An instance of such distinction being made is afforded by the proposals of the General Waste Materials Reclamation Trade Board. In my opinion the practice of the older Trade Boards of varying starting rates for learners according to age of entering the trade was open to criticism. The same practice has been adopted without, I think, in some cases, sufficient consideration, by some of the new Boards. Examples of this method of fixing learners' rates are afforded by the rates fixed by the clothing Boards. One unsatisfactory result of this method is that children who have been kept at school beyond the age of 14 find themselves handicapped when they come to enter industrial employment at the age, say, of 15 or 16, as compared with children who have left school at the age of 14, owing to the fact that the Trade Board determination requires that they shall be started at a wage substantially higher than that which can be lawfully paid to the younger workers, and employers tend accordingly to give preference to younger applicants. The Retail Bespoke Tailoring Trade Board originally fixed their learners' rates on this basis, but have now discarded the method in favour of the plan of fixing one starting rate irrespective of age, and increasing this rate by yearly increments in accordance with experience. The order of this Board dated 12th November, 1921 (R.B. (13)), provides for girls a learnership period of four years, and prescribes a rate of 10s. a week for the first year, 15s. 6d. a week for the second year, 21s. 6d. a week for the third

year, and 27s. 6d. a week for the fourth year; and the same rates are payable as minimum rates whatever the age of entry may be. Similar provision is made for boy learners. This plan is, I think, generally speaking, preferable to the older practice, and is, I understand, winning favour with other Boards. If this method had been adopted earlier I think a great deal of the criticism to which some of the clothing Boards have been subjected would have been considerably modified.

41. It is far too commonly assumed that industrial apprenticeship is dead. There can be no doubt that in recent years it has very largely fallen into disuse. In several industries, I think, this has arisen owing to want of foresight upon the part of both employers and workers. Indentured apprenticeship is still necessary in many craft industries, and this fact is slowly being recognised. Owing to the abandonment of apprenticeship there is a dearth of properly qualified journeymen, and there has been a distinct revival of interest since the war in the question of apprenticeship and industrial training.

In 1918, at the request of the Ministry of Reconstruction, the Bristol Association for Industrial Reconstruction conducted a local inquiry into the necessity for apprenticeship in several local industries, namely, those of engineering, ship building and repairing, building, printing, and boot and shoe manufacture. The result of this inquiry revealed a very wide measure of agreement, both among the employers and the operatives concerned, that indentured apprenticeship should be revived and extended. As an outcome of the inquiry, schemes, on modern lines, to secure proper and adequate industrial training under indentures for the boys concerned, have been brought into operation through the instrumentality of the Juvenile Employment Exchange at Bristol, or are now under consideration, in the following industries, namely, the building trades, engineering trade, boot and shoe trade, watch and clock making trade, furniture manufacturing trades, and dressmaking and allied trades. A permanent Central Apprenticeship Sub-Committee, of which I am Chairman, has been formed to supervise the schemes, and standing trade Apprenticeship Sub-Committees have been constituted in the several trades.

42. Several of the trades under the jurisdiction of the Trade Boards afford scope for indentured apprenticeship, and in my opinion it is most important that in those trades the Boards should consider and prepare proper schemes of industrial training on approved modern lines, with suitable apprenticeship rates. In framing such a scheme the most important matter is to so draft it as to secure to the apprentice a thorough and practical training. The wages paid should obviously be on a lower scale than those prescribed for plain juvenile workers or unbound learners. Rates which are unobjectionable as juvenile or learners' rates may often be much too high for bound apprentices. If the rates fixed by a Trade Board for juveniles are too high for apprentices, the inevitable effect must either be to kill apprenticeship in the trade in question, and so deprive the young entrants of proper training in their craft, or to cause the employers concerned who require apprentices to revert to the practice of demanding a substantial premium (a practice which during recent years has tended to decrease), with the result that apprentices will be drawn from a different strata of the population, and from homes where the parents can afford to pay a substantial premium in one sum within four weeks of the date of commencement of employment, in accordance with the provisions of Section 7 (1) of the Act of 1918.

Six Trade Boards (of Great Britain) have put forward schemes of indentured apprenticeship, namely the brush and broom, fur, boot and shoe repairing, retail bespoke tailoring, tobacco, and flax and hemm.

The first apprenticeship scheme proposed by a Trade Board was proposed by the Brush and Broom Board on the 4th February, 1920. The scheme was suggested by those which had been brought into existence at Bristol. The Board carefully considered the best existing practice in the trade, standardised it,

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

and in its final form the order (dated 15th October, 1920 (M.16)) consisted of four schemes referring to different branches of the trade and a model indenture applicable to all four schemes. The schemes made provision for a fixed ratio of apprentices to journeymen. These schemes have been favourably received by the trade, and are, I believe, working well.

43. The apprenticeship schemes put forward by the other Boards have been largely modelled on that of the Brush and Broom Board, and each successive scheme has been to some extent an improvement on the last. The most comprehensive of any is that of the Retail Bespoke Tailoring Trade Board (Order dated 5th October, 1921, (R.B. (II)), which deals with both boys and girls (i) who live out; (ii) who live out, but are provided by the employer with dinner and tea; and (iii) who live in and receive full board. This scheme was adopted by agreement on the report of a special Committee of the Board to whom the matter had been remitted. In view of the fall which has occurred in the cost of living and in wage rates generally since this scheme was proposed, it was recognised by all sections of the Board that the scale of rates must be reduced, and a proposal for a reduced scale of rates, both for apprentices and learners, was passed by the Board on the 20th January, 1922. The new rates are as follows:—

	Apprentices.		Learners.	
	Male.	Female.	Male.	Female.
	s. d.	s. d.	s. d.	s. d.
1st year ...	7 0	5 0	9 0	6 6
2nd year ...	10 6	8 0	12 6	10 6
3rd year ...	15 0	12 6	17 6	16 0
4th year ...	22 6	20 0	24 0	24 0
5th year ...	32 0	29 0	34 0	—

I may add that on the 7th December last I discussed the Board's apprenticeship scheme at a meeting of the National Federation of Merchant Tailors (Bristol and District Branch), at Bristol, and at the conclusion of the meeting a resolution was passed unanimously approving the policy of the scheme and promising support to it providing the rates were reduced in accordance with a revised scale recommended by the meeting. The new rates adopted by the Board on the 20th January, 1922, are in substantial agreement with this scale.

44. I feel very strongly that the Trade Board machinery for fixing and enforcing minimum rates for juvenile workers is absolutely necessary both in the interests of the trades and in the interests of the workers. In the past the conditions governing the employment of juvenile workers in many trades have been very unsatisfactory, and comparatively little attention has been given to the problems of juvenile labour either by employers' associations or trade unions. The Trade Boards afford an opportunity for quite a new departure in this respect, and I think there are distinct signs that they are gradually awakening to their responsibilities in the matter. It is obviously of very great importance to the craft trades that they should obtain a constant and sufficient supply of properly trained operatives. If this is to be secured, rates and conditions of employment must be prescribed and enforced which on the one hand do not throw too heavy a burden upon the employer, while on the other afford terms sufficiently attractive to the parents and children to secure an adequate supply of entrants of the right type.

If the apprenticeship schemes framed by Trade Boards are, however, to be used to the best advantage, I think some local organisation, on the lines of the standing Apprenticeship Sub-Committees constituted at Bristol, is required for the purposes of making the schemes known and securing their adoption both by employers and workers, interviewing and advising parents and entrants, and exercising some supervision over the training afforded by the employers of the apprentices. We are experimenting on these lines at Bristol, and I think that two further sub-committees to supervise two of the Trade Board schemes will shortly be constituted.

X. THE INFLUENCE OF THE WORKING OF TRADE BOARDS ON RELATIONS BETWEEN EMPLOYERS AND WORKERS.

45. I think that, speaking generally, the working of the Boards has improved relations between employers and workers. The effect of the Boards in this respect has, however, been less on some Boards than upon others. Personal factors and the nature and difficulty of the problems to be solved have had an important bearing on the extent to which the work on the Boards has resulted in suspicion being dispelled and feelings of confidence and respect engendered. Those Boards, such as the General Waste Materials Reclamation Trade Board, who commenced their work just when the trade slump began, have been severely handicapped. The history of this Board would, I think, have been very different if it had first met under happier auspices.

46. So far as the Brush and Broom and the Hair, Bass and Fibre Boards are concerned, I have no hesitation in saying that the work of the Boards has led to a great improvement in the relations between employers and workers.

The following resolutions passed by these Boards in 1921 support this conclusion:—

Brush and Broom Trade Board—10th March, 1921:

"It was moved by Mr. Mallon, seconded by Mr. Matthew, and unanimously agreed, that the attention of the Trade Board having been drawn to attacks and criticisms which have been made against the method of regulation of wages by means of Trade Boards, the Trade Board desire to place on record their view, which has been reached after an experience of 18 months of the working of the system, that the Trade Board has proved of great advantage in securing industrial peace in the trade and in the settlement of all questions relating to wages and conditions. The Trade Board further desire to record that, while there are certain administrative difficulties, towards the removal of which steps are now being taken, the establishment of the Trade Board in the Brush and Broom trade is regarded as an important step towards the attainment of self-government in the industry."

"It was further agreed that copies of the resolution be forwarded to the Prime Minister, the Minister of Labour, the National Union of Manufacturers and to the Press."

Hair, Bass and Fibre Trade Board—28th September, 1921:

"It was moved by Mr. Unwin, seconded by Mr. Laing, and agreed, that the Board record their opinion that the Trade Board has been of great assistance and utility to the trade both to the employers and to the workers, and that in the opinion of the Board the principle of the Trade Boards Acts was sound, but that the machinery of the Boards was in urgent need of radical amendment with the object of giving the Boards greater freedom of action and enabling them to fix and vary rates much more rapidly; and that copies of the resolution be sent to the Minister of Labour and the Press."

47. My experience is that the generosity of employers and workers have given an extraordinarily small amount of attention or thought to the larger questions of industrial policy and organisation. While successful employers are generally well informed with regard to the commercial side of their undertakings, they often appear to have surprisingly little knowledge or appreciation either of the broader considerations affecting the organisation of industry or of what I should term comprehensively "the human needs of labour." The workers, on the other hand, while acutely conscious of the human needs of labour, have very little knowledge or appreciation, as a rule, either of the commercial problems connected with the conduct of industry or of the larger economic questions. In justice it should be added that they have had very little opportunity of

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

acquiring such knowledge. Let me make it quite clear that there are many exceptions among employers, Trade Union leaders and rank-and-file workers. On the Brush and Broom Trade Board and the Hair, Bass and Fibre Trade Board in particular we are fortunate in having an unusually well-informed body of men and women on both sides. The ill-equipment both among bodies of employers and bodies of workers to sympathetically appreciate the problems of the other group in the respects just mentioned is one of the most serious results of the organised employers and workers having drifted so far apart in the years immediately preceding the war.

48. When a new Trade Board is constituted the need of greater knowledge on both sides is soon made apparent, but as time goes on, and the members take part in successive debates and discussions, and are called upon to face and solve the bigger problems of their industry, they begin to gain a more adequate grip of the problems which have to be solved and a new understanding of and sympathy with the difficulties and outlook of the other side. I am inclined to think that much of the criticism to which some Trade Boards have been subjected recently has arisen not so much from any questions of principle or policy in the Trade Boards system, but owing to the personal failure in the first instance of the personnel of the Boards to adequately appreciate the problems which they were called upon to consider and solve. It must not be overlooked that many of the Boards have only been in existence a very short time, and have hardly had time to really settle down to their work.

49. Before the war the organisations of employers and workers were drawn up for battle, and their relationship had become strained to a dangerous extent. During the war the necessities of the country compelled them to forsake old animosities and to come together in joint consultation on many subjects of national importance. This led to a very great improvement in their relations, and during the years of the war the foundation was laid for a new relation in industry based upon mutual confidence and goodwill. But this was a war product, and it was obvious that when the tension of the war period was removed there was grave danger of the old antagonisms again appearing unless steps were taken in time to retain, in a form suitable to a state of peace, the new habit of consultation which had arisen during the war. The proposals of the Whitley Committee were directed to achieving this end. Apart altogether from the wish to gain an increased share in the product of industry as a means of enhancing the standard of life of industrial wage earners, organised labour had become desirous of a new status which would enable the workers to acquire some measure of control over the conditions under which industry was conducted. The scheme of industrial government through the instrumentality of Joint Industrial Councils (with ancillary District Councils and Workshop Committees) and Trade Boards, proposed by the Whitley Committee, was directed to providing machinery whereby this aspiration for some measure of control over industrial conditions might be satisfied.

In my opinion the policy has already achieved a large measure of success. The Trade Boards, possessing as they do a legal sanction for their determinations, when confirmed by the Minister, are, within their limited jurisdiction, true organs of industrial government, and the importance and implications of this fact are slowly becoming recognised. The recognition of this fact, I think, has been a not unimportant factor in producing the relative freedom from unrest which has characterised the industries under Trade Boards since the close of the war. There have, so far as I know, been only two strikes, and those not of serious importance, in any Trade Board industry since 1918. This is doubtless largely due to the fact that the great bulk of

the workers have been reasonably well satisfied with the rates prescribed by the Boards, but I think the psychological factor to which I have alluded has been not unimportant.

50. Where the members of a Board are rightly selected and have an adequate appreciation of the responsibility of their position as members of an industrial legislative body, I am convinced that, as time goes on and the Board settles down to constructive work, old suspicions and animosities will tend to disappear and be replaced by feelings of respect and confidence and a sympathetic understanding of one another's difficulties. One difficulty I foresee is that of keeping the industry as a whole in sufficiently close touch with the Board and its proceedings. We have experienced difficulty on the Brush and Broom Board in bringing the employers and workers as a whole to understand and appreciate the reasons which have led to some of the Board's determinations, and I am afraid we have not always succeeded in doing so. I feel that some means should be sought to give wider publicity to the considerations which have caused Trade Boards to reach their decisions. I do not, however, at present see how this can be done save through the organisations of employers and workers, and probably this is the best channel by which the requisite information can be conveyed.

I have on two occasions, by invitation, and with the sanction of the respective Trade Boards, addressed bodies of employers connected with two of the Boards with which I am associated with the happiest results, and I think this practice should be extended.

XI. QUESTIONS OF SCOPE.

51. While I agree that a Trade Board should be consulted by the Ministry on questions of scope, I do not think that a Board should be empowered to give authoritative decisions on such questions. Work of this character could be done quite satisfactorily by some Boards, but in the case of others I feel sure that it would not be done satisfactorily. It would often happen, I think, that the members would seek to read into their determinations what they think they intended instead of applying their minds to the task of construing what they had written. Trade knowledge possessed by the Boards is of great importance and assistance to the Ministry, and it is convenient that the Ministry should know what they really meant if difficulty arises as to the construction of an order, but this, I think, is the limit of their usefulness in this respect. Questions of scope are bound to arise, and, until settled, cause great embarrassment and difficulty, and it would be a great advantage to all concerned if some authority existed with power to give a binding and authoritative decision on such questions. At present only the Courts, when proceedings have been taken to enforce penalties, can finally settle disputed questions as to the interpretation of Trade Board orders. This is, I think, very unsatisfactory, especially as a decision given may be only a determination of Justices in Petty Sessions. Very few cases under the Trade Boards Acts have been brought before the King's Bench on appeal by special case.

Under the Unemployment Insurance Act, 1920, the Minister of Labour is empowered to give authoritative decisions on questions of scope, and an appeal against his decision is given to a single Judge of the King's Bench Division of the High Court of Justice. I would suggest that similar provision be made in the case of Trade Board Orders.

In concluding this statement I should like to bear my testimony to the very efficient manner in which the Office of Trade Boards is conducted.

Mr. Popplewell and the Assistant Secretaries have acquired a most remarkable and intimate knowledge

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

of the trades covered by the Boards, and their assistance, so readily placed at our service at all times, is invaluable.

(Signed) E. H. C. WETHERED.

Albion Chambers,
Bristol.

January 25th, 1922.

MEMORANDUM by Mr. E. H. C. WETHERED (Chairman of the General Waste Materials Reclamation Trade Board) (Great Britain), with reference to the Evidence given by Mr. Ashley Ward on the 24th November, 1921.

Mr. Ashley Ward gave evidence before the Committee at the Eighth Meeting on the 24th November, 1921. Mr. Ward is a member of the General Waste Materials Reclamation Trade Board, but tendered evidence on behalf of the National Union of Manufacturers. In the course of his evidence Mr. Ward made a number of statements as to the proceedings of the General Waste Materials Reclamation Trade Board which are not only inaccurate but calculated, if not corrected, to give an entirely erroneous impression of some of the proceedings of the Board. His evidence, moreover, has been given a wide publicity in the trade press. In consequence, I must ask the indulgence of the Committee to permit me to deal with his evidence at some length.

1. Mr. Ward dealt specifically only with one of the rates which has been proposed and fixed by the Board, namely, the rate of 55s. for a week of 48 hours for the lowest grade of adult men in the Scrap Iron and Scrap Metal section of the trade, and with reference to this rate he made the following statements, which for convenience I have set out, with paragraph references, together with my observations on each:—

2. *Par. 2954.*—"Chairman: Could you tell us what the employers proposed in this case?—Mr. Ward: If I remember aright, 48s. a week. . . ."

This statement is incorrect. 48s. was the original proposal moved by the employers at the meeting of the Board on the 10th August, 1921, but the final offer, which was proposed on behalf of the employers by Mr. Watson, and seconded by Mr. Hall, was 52s. for a week of 48 hours. The employers moved two rates together, namely, for the Scrap Iron and Scrap Metal section of the trade 52s., as already stated, and for all other sections 47s. The workers moved as an amendment 53s. and 48s. respectively for the same sections. There was thus only the difference of 1s. between the two sides. The appointed members were not prepared to support any figure below 48s. as a rate for adult male workers, and accordingly they voted for the amendment, which subsequently became the resolution of the Board.

In justice to Mr. Ward, I ought to say that the rate of 52s. was moved in his absence after he had left the meeting.

3. *Par. 2983.*—Mr. Ward: "—, I attended the August Board meeting myself, and I can tell you that the workers' rate proposed in August, when we started that meeting, was £3 5s. a week—"

This statement is not correct. The rate proposed by the workers on the 9th August, 1921, for men in this section of the trade, was 62s. 6d.

4. *Par. 2951.*—Mr. Ward: "—the actual wage to-day for the steel works labourer, as required by the Steel Smelters' Union and the South Wales steel manufacturers, is £2 4s. 10d.—"

Par. 2952.—Mr. Ward: "—In the tin plate trade, which of course is allied, the rate is only actually £2 2s. 7d. to-day—"

With reference to the comparison drawn by Mr. Ward between the rate of 55s. fixed by the Board for adult male workers in the Scrap Iron and Scrap Metal Section of the trade and that payable on the

24th November, 1921, to the steel works labourers, namely, 44s. 10d., and in the tin plate trade of South Wales 42s. 7d., I desire to make the following observations. This matter was fully considered when the rate was proposed at the meeting held on the 9th and 10th August, 1921. The figures furnished to the Board at that meeting were as follows:—

	s.	d.
South Wales steel labourers ...	52	5
Staffordshire Iron Works ...	54	0
Railways ...	57	0
Sheffield Steel Works ...	58	1
Labourers in Waste Trade yards ...	55	0
	to 56	0

Mr. Ward informed the Board on that occasion that his firm were "paying shillings higher to-day than that of the steel workers."

I have fortunately preserved my note, made at the time, from which these particulars are taken, and I shall be happy to produce it to the Committee if desired.

As I understand the matter, the labourers in the steel works of South Wales are paid a wage under a sliding scale agreement made some time ago, by which the rates of wages paid to the men employed vary according to the selling price of steel bars. It is, in effect, a profit-sharing arrangement, and it was pointed out to us on the Board that under this arrangement the workers get the advantage when prices are high, and must take the consequences when prices go down. By way of an irreducible provision no "stop" by which the workers have no control at all over the figures at which the selling prices of steel bars are fixed, this matter being entirely under the control of the employers. We were also informed that under this arrangement the steel works labourers in South Wales during the recent boom were receiving a wage of £4 6s. a week. If the wages of the steel works labourers rose again in consequence of an improvement in the price of steel bars, I imagine Mr. Ward would object very strongly to the suggestion that the rates for labourers in scrap metal yards should follow the same upward movement.

The appointed members felt that the position of the steel works labourers in South Wales under these circumstances was so peculiar, and the wage which they were in receipt of on the 24th November last was such as could not be regarded as a living wage—or, to use Mr. Ward's phrase, such as to provide "a reasonable standard of frugal comfort"—that the considerations urged by Mr. Ward were not sufficient to warrant them in refusing to fix a rate which was only 1s. above that proposed by the employers themselves on the 10th August, 1921.

5. *Par. 2955.*—"Chairman: These proposals were made some time ago?"

Mr. Ward: In August, and they were forwarded to the Minister for confirmation . . . and the Ministry have sent them back to-day . . . for reconsideration by the Board."

Par. 2957.—"Chairman: I think the rate was proposed in January, was it not, and that was sent back by the Minister, and then this new rate was proposed, and it has been referred back again?"

Mr. Ward: That is so."

This is not so. No rate was proposed for these workers in January, 1921. Only one rate has ever been proposed by the Board for men in the Scrap Iron and Scrap Metal section of the trade, namely, the rate of 55s. proposed on the 10th August, 1921, and fixed on the 24th November, 1921. This rate has not been referred back by the Minister. It is, I understand, still under consideration by him.

The rates proposed in January, 1921, related solely to female workers. These were agreed rates, save as to the piece work basis time rates; the latter rates were adopted by vote, the appointed members voting with the employers. After these rates were proposed the industry felt the full force of the trade slump, and a large number of objections were lodged to the

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

proposal. On the understanding that the Board would forthwith consider a fresh proposal reducing the rates, they were fixed by the votes of the appointed members on the 11th March, 1921. Eventually the Minister referred the rates back, and on the 10th August, 1921, a new scale of women's rates was adopted by agreement and was fixed by the votes of the appointed members on the 24th November, 1921. These rates are, so far as I am aware, still under consideration by the Minister.

6. *Par. 2956.*—"Mr. Layton: Is that a first fixing of the rate, or a variation?"

Mr. Ward: No, it is the first fixing. It has taken twelve months to do that, and 27 days of argument."

It is quite true that the male rates for this trade have been under consideration by the Board for twelve months, but it is not true that the male rates proposed on the 10th August, 1921, were arrived at after 27 days of argument. Including the meeting on the 24th November, 1921, the Board have met for all purposes on 18 days only. In addition 6 days have been occupied by meetings of Committees. Male rates have been before the Board on 14 occasions, but on 9 occasions only was the rate for labourers in the Scrap Iron and Scrap Metal section of the industry under consideration, and then as one item only on a long agenda. In addition this rate was on two days considered by Committees.

7. *Par. 2949.*—Mr. Ward: "... for myself I have put something like 24 to 27 whole days in the endeavour to come to a settlement."

I have referred to the Minutes, and I find that Mr. Ward has attended meetings of the Board on 6 occasions only, namely, on 6th January; 8th, 28th and 29th April; 9th and 10th August, 1921. He has not attended any meetings of the Committees.

8. The history of the rate proposed on the 10th August, 1921, for men in the Scrap Iron and Scrap Metal section of the trade is as follows:—

A proposal for adult male workers was brought before the Board at its first meeting on the 28th and 29th September, 1920. No action was, however, taken, and the question of a rate for workers in the Ship Breaking, Scrap Metal and Scrap Iron sections of the trade was referred to a special Committee. It was agreed that a representative from the firms of Messrs. T. W. Ward, Ltd., and Messrs. G. J. Cohen and Co., Ltd., should be invited to attend the meeting of this Committee. The Committee met on the 21st October, 1920, but Mr. Ward did not attend the meeting.

On this Committee I ruled that ship breaking was outside the scope of the Board. This view was confirmed by the Minister.

After a full discussion the Committee arrived at unanimous agreement to recommend to the Board the adoption of 70s. for a week of 48 hours as the minimum rate for adult male workers in the Scrap Iron and Scrap Metal section of the trade.

This recommendation was reported to the Board on the 5th November, 1920, and was adopted (Minute 33) subject to the understanding that the recommendation would not apply to any male workers in respect of time during which they are engaged in the operations of loading and discharging water borne craft.

Further consideration of this rate did not take place until the meeting of the Board on the 3rd February, 1921.

At the meeting of the Board on the 29th April, 1921, the workers moved (Minute 24) that a notice of proposal be issued to fix the rate of 70s. referred to in Minute 33 of the Minutes of the Board meeting of the 5th November, 1920. The employers, as an amendment, moved (Minute 25) that the Board's resolution contained in Minute 33 of the meeting of the 5th November, 1920, be rescinded. No vote was, however, taken on either the motion or the amendment, and no action was taken at this meeting.

In view of the depressed state of the trade and the

alteration which had taken place in the cost of living figure, the question of male rates was reconsidered by the Administrative Committee on the 27th July, 1921. No agreement was reached, and the Committee so reported to the Board on the 9th August, 1921.

After a lengthy discussion on the 10th August, 1921, the rate of 55s. was adopted by the Board. On the 24th November, 1921, the Board fixed the rate, and, so far as I am aware, the Minister still has its confirmation under consideration.

The following statements refer to matters other than the 55s. rate:—

9. *Par. 2949.*—Mr. Ward: "The rate has been fixed, not for the lowest paid worker on the subsistence level, but for every grade of worker."

Mr. Ward was referring here, I gather, not to any particular rate, but to all the rates fixed by the Board. This statement is not correct. The Board contains what are, in effect, four separate trades, namely (i) Scrap Iron and Scrap Metal; (ii) Woollen Rags and Woollen Waste (including Hosiery Waste); (iii) Waste Paper and Paper Making Materials; and (iv) Marine Store Dealers. The Board have fixed one minimum rate for men for all sections of the industry except the Scrap Iron and Scrap Metal section, and one rate for women, together with a juvenile scale, for each section of the industry, and have made no attempt up to the present to fix differential rates for superior grades of workers.

10. *Par. 2949.*—Mr. Ward: "... nothing could have been more futile than the refusal of the Chairman and the Minister to consider 12 months ago the postponement of the operations of this Board from six to 12 months to allow conditions to stabilize."

I have some recollection of a suggestion being made on behalf of the employers, that the operations of the Board should be postponed, and that I explained that I had no power to postpone the operations of the Board. No definite motion for such postponement was ever moved.

11. *Par. 2949.*—Mr. Ward: "The Chairman's attitude was this: 'I have been appointed by the Minister to fix minimum rates for this trade, and fix rates I will—some sort of rates.' He made that statement in my hearing."

I am sure that Mr. Ward's recollection is at fault as to this. I say positively that I never made any such statement. I am not appointed to fix rates. To fix rates is the duty of the Board, not of the Chairman.

12. *Par. 2955.*—Mr. Ward: "The general procedure, in my experience, is that of practically the whole of the Trade Boards."

Par. 2974.—Mr. Ward: "You can take it as a general fact that the case for the workers is conducted by the recognised labour leaders. It is never conducted by, or spoken on by, any workman, and if any workman attempts to speak he is very quickly shut up."

Par. 2955.—Mr. Ward: "The whole of the employers' representatives speak On the workers' side no practical workman, if he is on the Board, ever speaks. The case is always presented, in other words, in political oratory by Union people in connection with the labour leaders, and instead of the Trade Board being a reasonable group of practical men out to solve a difficulty, the whole procedure of the Board is sacrificed to tactics You will see that procedure such as that does place the whole situation in the hands of the Appointed Members and induces the situation mentioned by Mr. Stamper."

Mr. Ward is not a member of any Trade Board except the General Waste Materials Reclamation Board. On this Board, as already stated, he has attended on six occasions only.

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

My experience is different. It is true that upon the General Waste Materials Reclamation Trade Board most of the speaking on the workers' side has been done by the more prominent Trade Union leaders. This is quite understandable. The bulk of the workers' side are content to leave the expression of their views in general debate to the leaders of their side. The importance of what I may call the "rank-and-file" worker on the workers' side of a Trade Board lies rather in the side meetings and the conferences than in the general debates. This practice is not confined to the workers' sides of Trade Boards. During the time I was upon the Laundry Trade Board, practically the whole of the speaking on the employers' side in general debates was undertaken by three or four leaders on their side, while the speaking on the workers' side was much more evenly distributed over the whole membership. Upon the Brush and Broom; Hair, Bass and Fibre; and Retail Bespoke Tailoring Trade Boards, the general debates are taken part in fully by the whole membership.

13. *Par. 2955.*—Mr. Ward: " . . . they (the Appointed Members), did go in my hearing to the length which Mr. Stamper has mentioned, and say 'You have mentioned such-and-such a figure; the labour members such-and-such a figure; we cannot vote for your figure. If you will come to this mean figure, we will vote for it. If you will not, we will vote for the original resolution on the higher figures.' "

Neither I nor the Deputy Chairman, Professor Daniels, who acted on occasions in my absence, have any recollection of any such incident, and I think Mr. Ward's recollection is again at fault. On the 12th January, I wrote to Mr. Ward requesting him to furnish me with the name of the Appointed Member whom he alleges made the observation, the date when it was made, and the rate then under discussion. The receipt of my letter has been acknowledged, but up to the time of drafting this statement no further reply has been received. If Mr. Ward means to suggest that I or either of the Appointed Members have at any time threatened the employers on the Board that if they did not agree to what we thought right we should vote for the other side, I say that no such threat has ever been made.

14. The Deputy Chairman, Professor Daniels, has read this Memorandum, and desires me to say that he fully endorses my statements.

(Sgd.) E. H. C. WETHERED.

Albion Chambers, Bristol.

January 25th, 1922.

ADDENDUM TO MEMORANDUM by Mr. E. H. C. WETHERED (Chairman of the General Waste Materials Reclamation Trade Board (Great Britain)) with reference to the Evidence given by Mr. Ashley Ward on the 24th November, 1921.

1. Since forwarding to the Committee my Memorandum dated 25th January, 1922, with reference to the Evidence of Mr. Ashley Ward, I have received a letter from him dated 27th January in reply to my communication to him of 12th January. My letter and Mr. Ward's reply are as follows:—

Letter from Mr. Wethered to Mr. Ward, dated 12th January, 1922.

"Dear Mr. Ward,

I have been requested to give evidence before Lord Cave's Committee on the 1st February, and the transcript of your evidence, given on the 24th November last, has been forwarded to me by the Secretary to the Committee for my observations.

It is very distasteful to me to have to criticise the evidence of a colleague, but I regret to say that your evidence before the Committee contains a number of statements with reference to the proceedings of the General Waste Materials Reclamation Trade Board (Great Britain) to which I am bound to take exception. In particular, in *par. 2955* you state that "they (the Appointed Members) did go in my hearing to the length

which Mr. Stamper has mentioned, and say 'You have mentioned such-and-such a figure; the labour members such-and-such a figure; we cannot vote for your figures. If you will come to this mean figure, we will vote for it. If you will not, we will vote for the original resolution on the higher figures.' "

I should be glad if you would kindly inform me by whom this statement was made, on what date, and with reference to what rate.

Yours faithfully,

E. H. C. WETHERED."

Letter from Mr. Ward to Mr. Wethered, dated 27th January, 1922.

"Dear Sir,

I am sorry for the delay in replying to your letter of the 12th inst., which has been caused through my absence from the office.

In the first place I wish to tell you that it has never been maintained by me that the Appointed Members have endeavoured to force a settlement by a threat to vote for the resolution of the other side, rather has it been that the procedure of the Board and tactics of the Labour side has been such as to force you virtually into that position that the employers are compelled, under pain of something worse, to assent to a rate which they know is not economical. There is no question that both yourself and Mr. Daniels made the statement repeatedly, to those whom you were meeting in private consultations, that you would be compelled to vote for one of the resolutions and that it would not be ours because you considered them too low, it was possible therefore for a Labour resolution to go through at a high rate but not ours at what you considered to be a low rate.

This sort of thing occurred specially in regard to the women's rates, but it also occurred in regard to the meeting which was held on August 11th.

To my mind there has never been any question but that this has occurred but I have first of all secured confirmation from Mr. Watson and Mr. Hyman before writing you.

You are aware I think that my colleagues have never expressed the slightest disrespect at the way in which you have conducted the meetings of our Board, you have always treated them with the greatest courtesy and consideration and it has never been suggested by us that the Appointed Members have deliberately adopted this method of bargaining to force a decision, it is simply that the method and conditions under which these Trade Board negotiations are carried out have forced such a position upon you and us.

Yours faithfully,

ASHLEY S. WARD."

2. I fully accept Mr. Ward's explanation, but I venture to think that his statement to the Committee (*par. 2955* of Minutes of Evidence; *par. 13* of my Memorandum with reference to Mr. Ward's Evidence), unless explained, was calculated to leave in the minds of the Committee and of anyone reading the print of his evidence, a very different impression from that which would be given by a perusal of Mr. Ward's letter of the 27th January, associated as his statement was with the allegations made by Mr. Stamper. Mr. Ward's statement in his letter of the 27th January does not, I think, differ substantially from the suggestion made by Mr. Ponlton when Mr. Stamper was giving evidence (Minutes of Evidence, *par. 2943*), with which I entirely agree.

3. I do not question for a moment that the Appointed Members, in the course of the discussions on the women's rates in private consultation, informed the employers that if the matter came to a vote they would be compelled to decide on which resolution before the Board they would cast their votes, and that it would not be the employers' resolution then under discussion because they considered the rates proposed by the employers too low. It did not, however, follow that we should have supported the proposals of the workers' side. On several occasions we told the workers that we were not pre-

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

pared to support their proposals because we considered them too high, and I may add that with regard to the discussion of the men's rates on the 10th August last (not 11th August, as mentioned by Mr. Ward in his letter), the Appointed Members, after doing their best to bring about an agreement, and having failed to do so, informed the Board that they were not prepared to vote on either the employers' or the workers' resolutions, and that, if the matter had to be decided by their vote, the Board must be adjourned, as they desired further time to consider the position in view of the serious issues involved. This announcement was made by me to the full Board. Thereupon the leaders of both the employers' and the workers' sides stated that they were very anxious to avoid a further adjournment of the Board, and asked that they might have an opportunity for further consultation between the leaders of both sides. To this I assented, and the leading representatives of the two sides left the Board for private consultation. On returning, Mr. Watson, on behalf of the employers, stated that they had had a very useful conversation, although unfortunately they had not arrived at an agreement, but in order to reach a decision and to avoid a further adjournment, the employers were prepared to move 52s. for a week of 48 hours for the lowest grade of male workers in the scrap iron and scrap metal section of the trade, and 47s. for all other adult male workers in the industry. To this resolution the workers moved, as an amendment, 53s. and 48s. respectively. Since both sides had expressed their desire that the matter should be decided at that meeting, and in view of the small margin of difference, namely, 1s. on each rate, which then existed between the two sides, the Appointed Members felt that they were bound to reconsider their decision not to vote, and voted in support of the workers' amendment, which was carried.

(Sgd.) E. H. C. WETHERED.

Albion Chambers,
Bristol,

January 28th, 1922.

11,377. *Chairman*: I think you are a Barrister-at-Law?—Yes.

11,378. You have been since 1913 Chairman of the Court of Referees, until the end of 1918 for the Bristol and Swindon Districts, and since then for the Bristol, Kingswood, Bath and Trowbridge Districts?—Yes, that is so.

11,379. During the war, from 1915 onwards, you were Chairman of the Local Munitions Tribunals for the Bristol and Swindon Districts?—Yes, that is so.

11,380. You are one of the Panel of Umpires appointed by the West of England District Council of the National Wool (and Allied) Textile Industrial Council, and you have other experience?—Yes.

11,381. You are an Appointed Member of four Trade Boards?—Yes, that is so.

11,382. They are the Brush and Broom Trade Board; the Hair, Brass and Fibre Trade Board; the General Waste Materials Reclamation Trade Board; and the Retail Bespoke Tailoring Trade Board?—Yes.

11,383. You are the Chairman of the first three, and the Deputy Chairman of the last?—Yes. I have recently been appointed Deputy Chairman of the last, on January 17.

11,384. You were for a time a member of the Laundry Trade Board?—Yes, that is so. I ceased to be a member of the Laundry Trade Board when I was transferred, at the request of the Minister, to the Retail Bespoke Tailoring Trade Board.

11,385. You first deal in your statement with some general considerations. You say that some machinery for fixing minimum rates of wages is necessary in every industry?—Yes, I think so.

11,386. First to secure a reasonable standard of life, secondly to safeguard the economic position of women and girls, thirdly to safeguard the position of good

employers, fourthly to prevent industrial strife, and fifthly to establish good relations in industry?—Yes.

11,387. As regards a reasonable standard of life, you refer first to the declaration contained in the Treaty of Versailles?—Yes.

11,388. You say that without some means of fixing and enforcing rates, wages tend to be depressed to an unreasonably low level?—I think that is so. I feel that very strongly.

11,389. Especially in the case of women and girls?—Especially with women and girls. I think that if the machinery existing at the present time for the protection of the rates of women and girls were removed, there would be a hopeless collapse of the wage rates of women and girls in almost every industry.

11,390. *Dame Adelaide Anderson*: At some time or other I should like to know what you think are the real reasons for that. I mean what is it that makes the women and girls so liable to this depression?—You will recollect that the question was analysed and a great many reasons given for it by the War Cabinet Committee on Women in Industry in their Report, and in the Memorandum of Dr. Janet Campbell contained in the Report: first, they are very difficult to organise and very difficult to maintain in unions when they are organised; they do not look upon their work as being a permanent fact as men do; the great majority, of course, marry, and they are therefore not so insistent on demanding and seeking a proper wage; and I think there is a general view that women's labour is of less value than that of a man.

11,391. Is there not a great distinction between what women are good for and what men are good for in industry?—I think there is, most emphatically.

11,392. Then why does that operate?—I think it is a time-honoured prejudice more than anything else.

11,393. They are at least as skilled in their own lines as the men are in theirs?—I think so, certainly.

11,394. And their industries are just as essential?—Yes, quite.

11,395. In some industries both are essential?—Yes.

11,396. And each contributes something which is of fundamental value, however different?—Certainly.

11,397. Perhaps this is rather going off the main line; but therefore there ought to be a greater effort made to organise them?—Certainly.

11,398. In order to fight against that tendency?—I think the Trade Boards help to organise the women and girls very much.

11,399. *Chairman*: There is one other difference: that most men have dependants and most women have not?—I was going to say that. There is that great differentiation: that when one is dealing with minimum wages one has to have regard to the fact that the man normally has to provide for a family, while, dealing again with the normal case, the average woman has no dependants, and you have to deal with her as a single economic unit. Therefore when you are fixing minimum wages for men and women you have to fix them on entirely different datum lines. I think it must be borne in mind that I only say that that is the position of normal women. Mr. Seebohm Rowntree's investigations show that 12½ per cent. of women workers in England have dependants.

11,400. *Mrs. Lyttelton*: And it operates very hardly upon the 12½ per cent.?—It does, because no women's rates are fixed with any regard to dependants at all.

11,401. *Dame Adelaide Anderson*: But assuming that a woman normally has no dependants?—Trade Boards consider that a woman normally has no dependants. Trade Boards fix their rates for women on the basis of their being single, independent economic units.

11,402. So that the fact that they have no dependants does not really militate against their getting the minimum which is suitable for them?—I am afraid I do not quite follow.

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

11,403. It is admitted on all the Boards that a lower rate is adequate for them?—Yes—not a lower rate against an individual man. I do not know that that has ever arisen, because when you are dealing with men's rates you have to fix a rate which is suitable to a married man, that is to say, a man with a family. I mean you have to fix a minimum rate for a man which is above what a single man needs, because when you legislate for a class you must deal with the family condition.

11,404. You mean that it is more difficult for a woman to get her rate than it is for a man to get his rate?—Yes, I think it is. Apart from the reasons which I have given, one knows that the average rate was given in the Report of the War Cabinet Committee on Women in Industry as being 10s. or 12s. per week before the war, and the average wage for all women 13s. 6d.

11,404A. As a matter of fact, although the girl or woman is not normally the supporter of others, she does, more generally probably than the male worker, put her money earnings into whatever home she is in?—Certainly.

11,405. Entirely?—Certainly.

11,406. So that whatever she gets is of immense value to the home?—Undoubtedly. I think the fact that a great many women are earning and bringing money into the home is one of the facts which have led to less trouble over the unemployment problem at the present moment than otherwise would have arisen.

11,407. Mr. Layton: You would limit the remarks which you make in supporting your view, that if Trade Boards were removed there would be a collapse of wages, to industrial employment alone?—Yes.

11,408. It would not apply, for example, to domestic service?—No.

11,409. What is the essential difference between them?—I do not think that the rates prevailing in industrial employment have much bearing upon the rates paid to domestic servants. I have never heard of any connection.

11,410. What are the essential differential factors which do not tend to depress wages in domestic service in that way, compared with industrial employment? You made a statement that, in the absence of Boards, you would have a definite collapse of women's wages?—I suppose one of the reasons why the rates are higher now for domestic service—I do not know whether relatively higher, but certainly in cash higher—than they were before the war, is that, during the time of the war, so large a number of women and girls were drawn off to munition factories that very few people entered domestic service, and there is at the present time a great dearth of skilled domestic servants, though not of unskilled domestic workers, and that scarcity, to a great extent, is keeping their wages up.

11,411. It does not necessarily follow that, in all circumstances, absence of organisation means constantly depressed wages?—May I quote an example: I have quoted it in my evidence. A considerable employer of labour on one of the Boards with which I am associated—in fact I am at liberty to mention his name if you desire it—he told me I might—said to me the other day: "If this Board is abolished it will be a very serious thing for everybody." I said, "Why?" He said, "Because if this Board is abolished, in a very short time a great number of the workers in this industry will have their wages forced down well below the level of subsistence. We ought to have had this Trade Board 12 years ago."

11,412. Chairman: Which Board was that?—Shall I give it to you?

11,413. I do not ask the name of the employer, but which Board was it?—The Hair, Bass and Fibre Board.

11,414. Mr. Layton: I only put my question wondering whether you were giving all the elements in the problem—whether there is, in fact, a much larger supply of women's labour than is needed, that is to

say, an available surplus of women's labour. You mentioned that, and I wondered whether you took that into account?—I have not attempted to give an exhaustive list. I answered on the spur of the moment. I should want some time to think about an exhaustive list; but the fact that there is a very large reservoir from which to draw women's labour is, of course, a very important factor.

11,415. Dame Adelaide Anderson: As a matter of fact the number of domestic servants in normal times, compared with the number of women and girls in industry, say in the last 10 to 20 years, is very small?—I am afraid I could not answer that question. I think it may be so.

11,416. It is so.—I am afraid I could not answer that.

11,417. Lord Weir: You speak of the means or the lack of means of fixing and enforcing rates tending to depress wages to an undesirably low level. Of course, you may have an undesirably low level coupled with a very effective means of fixing rates. As to those principles to which you refer in the labour clauses of the Peace Treaty, how are they being given effect to, for example, in mining and agriculture, and iron and steel wages to-day in this country?—I am afraid that they are not being given very much effect to.

11,418. How do you suggest they should be?—You mean how do I suggest they should be given effect to in those trades?

11,419. Yes. Those are trades employing a very much larger number of British workers than the Trade Board trades?—Yes, quite. The cases which you have instanced differ very much in their circumstances. The steel trade, at the present time, is, of course, subject to very fierce competition, especially from Germany. Owing very largely to the depreciated external value of the mark at the moment, competition is almost impossible. Then, with the very low wages which are now ruling in the steel trade in South Wales, I see from a Trade Journal this week that trade is so depressed that hardly any orders are coming in at all. It is very difficult to know how you are going to deal with an abnormal situation like that. Agricultural wages, of course, are coming down tremendously. I suppose that they are not below subsistence level at the present time, but I should imagine that some people must have an exceedingly difficult job to live at the present levels, having regard to the current cost of food. The question is what the industry can really bear in agriculture. I think the outlook of the agricultural labourer is very bad.

11,420. Suppose you take the miner?—You are dealing with a question there of which I have no experience at all. I do not know anything at all about the coal mining industry.

11,421. It is quite true that you may have no experience of it, but you make generalisations here, and the mining industry is an industry which employs a million British workers?—I say that I have no experience of the mining industry, and therefore I cannot express any opinion about a matter as to which I know nothing at all; but I do know that I have frequently spoken with those who are brought into connection with the mining industry, and they do not know what is going to happen if wages in the mining industry go down any further, or do not improve. They think that very serious things are likely to happen, because if you have got a married man with a family dependent upon him, he simply cannot maintain anything like a standard of life on the wage that is being paid in some districts. If there are two wage earners—if, for example, a son is bringing something into the house—they can manage to struggle along, but if a man is receiving 6s. 11d. per day, for instance, which is the present wage for labourers in some of the coal districts, I should say that it is a very serious state of affairs.

11,422. So that really it is a situation with which no machinery can suitably deal?—I think that is very possibly so. I think that in an abnormal situation like the present that conclusion is probably quite justified.

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

11,423. *Sir Arthur Pease*: Before the war a very large part of the population was below the level which is put forward, I think, by yourself and Mr. Rowntree as a subsistence level?—Yes.

11,424. Do you not think that, having regard to the loss which we have sustained in the war, every class of the population will have to be worse off now for some years than they were before the war?—No, I do not, because I think that the level of the standard of life attained by a large part of the industrial class before the war was so low that there is no possible space for any further compression. I think they were really on the poverty line. If one reads the Memorandum of Dr. Janet Campbell annexed to the Report of the War Cabinet Committee on Women in Industry, presided over by Lord Justice Atkin, and the opinion which she formed as to the physiological effect upon women of the low wages prevailing, and the very grave warning which she uttered, which I think has not received anything like the attention it should have received, as to the future prospects of the nation if something is not done to improve the physical standards of women, which she regarded as partially due to the low wages paid to women, I think it will be agreed that there is no room for any further depression of the standard of life.

11,425. But where is the money to come from to pay for this?—I am not actually engaged in industry, but I have often heard it said, and it is said very frequently, that one really does not know what an industry can bear in the way of wages until one has tried it. It is wonderful what you can do when you have to adjust your circumstances to a higher wage standard. I have heard manufacturers say that to me in many cases.

11,426. Without putting up prices?—I do not know about that.

11,427. If you put up prices it tends to reduce your business?—Of course you cannot go on putting up prices indefinitely, but a great deal can be done by introducing improved methods of production. I think that there is at the present time an enormous wastage, because our productivity is not efficient. I think low wage standards are a very great factor in perpetuating a low level of productivity in certain industries.

11,428. I agree with you that where wages get up to a certain height it makes it necessary to put up machinery to do the same work?—Quite.

11,429. But taking the thing as a whole, of course we are always improving?—Quite so.

11,430. Do you think that anything we could possibly do within a reasonable period would enable us to pay wages on a higher basis than we did before the war—taking the whole thing all round?—Do you mean at once—now?

11,431. Within a few years?—It is very dangerous to prophesy. Now everything is so abnormal; but I think you can certainly in some industries.

11,432. I have seen calculations that in some of the big trades a 10 per cent. rise in wages would have wiped out the whole of the profits for 10 years before the war?—I know.

11,433. If you come to figures like that there is not very much room, is there?—If that is really so, no; if that really can be established there is not much room.

11,434. I think it is established. That does not relate so much to the distributive trades, of course, where the wages are a comparatively small part of the cost; it is in manufacturing trades?—Quite so.

11,435. We have had evidence here to show that wages run at anything from 40 to 80 per cent. in some trades?—Yes, in some trades. Of course I know nothing about the pre-1918 Boards; I came into the Trade Board work after that date; but I think the same argument was advanced, was it not, in the clothing trade when the 1909 Act was passed; it was argued that the industry could not possibly bear higher rates, and would be broken if the rates proposed by the Trade Board were put into force; but it did not happen.

11,436. Were you not really dealing there with just a comparatively small pocket, who raised their prices to compensate them for the rise in wages, whereas now if you extend the Trade Boards over everything, you have got to raise the whole level of wages?—Quite. Of course I have no practical actual experience myself of industry; I can only deal with what friends of mine engaged in manufacturing industries tell me; and manufacturers of wide experience constantly tell me that in many cases there is a margin of waste owing to bad management, obsolete methods, and so on, and they do not think it is necessary to return to the comparatively low level of pre-1914.

11,437. In spite of the heavy taxation and so on, which we have to bear as well?—We hope that that may be reduced some day. I mean it is very difficult at the present time, and I have said so in my statement—at the present time I should regard it as quite impossible, by a Trade Board or anything else—to fix standard rates of minimum wages which would satisfy Mr. Rowntree's figure now, or probably for some time to come. I candidly admit that.

11,438. You have really come to the point as to whether it is worth while making a rate so that these trades can struggle on, or whether you will make rates which will stop them altogether in many cases?—I have never so far come across a case in which it has been suggested that they have stopped industry. What I think may happen if a reasonable standard rate is insisted upon is, that old-fashioned and badly managed shops in an industry may find it impossible to come up to the standard of wages imposed; but I have never heard a suggestion of an industry being stopped as such.

11,439. A large part of an industry?—I have never heard of such a case. You see rates which have been fixed by Trade Boards, as far as my experience goes, have never been at all in excess, or at any rate appreciably in excess, of rates which were already being paid by well-managed shops; or reasonably managed shops—I will not say "best managed"—in that industry; that is to say rates which those in well-managed shops in the best places are in fact paying.

11,440. Of course everyone wants to get the best wage he possibly can?—Quite so.

11,441. But it is no good fixing a wage which will not give him anything at all?—Quite; but in trades with which I am associated—take, for instance, the Brush and Broom Trade Board, which is the one I have been connected with longest, and it is a very fine Board—the rates which we have fixed from time to time on that Board have nearly always been fixed by agreement. Those rates have not been in excess, or to any appreciable extent in excess, of rates which were actually ruling in good shops in the industry. The actual effect of the Trade Board fixing a rate right through the country has been to bring backward shops which wanted to keep in business up to the more reasonable standard which other people had found it possible to achieve.

11,442. *Mrs. Lyttelton*: In fact the standard has been rather set by the well-managed shops in the industry?—Yes. The effect of the minimum wage legislation by the Trade Boards has been to put the screw on the apathetic and slow employers in many cases and to make them put their house in order and to bring their business up to a higher level of efficiency. In my judgment that is one of the most important things Trade Boards have done.

11,443. Your point is that they have not screwed up the wages above the level which was paid already by well-managed businesses?—No, certainly not.

11,444. *Sir Arthur Pease*: Are not the lowest paid wages often paid in workshops which are not making the better class of manufacture, and are therefore competing most keenly with cheap foreign production?—I should think that is very often the case.

11,445. And that good manufacturers are doing the high-class trade?—I think that is probably broadly

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

true, but in the Brush trade to which I was referring many of the good manufacturers do an all-round trade, which I should think is quite typical of a section of the whole industry. On Boards with which I have been connected, so far as we have fixed time rates we have always definitely laid ourselves out to fix minimum rates, not standard rates; that is to say, we have been dealing with national rates. They have objected to district rates in every case; but they are all manufacturing industries. I beg your pardon, I am talking about the Brush and Broom Trade Board for the moment, and the Hair, Bass and Fibre Trade Board. They are manufacturing industries. They have definitely rejected the idea of district rates being discussed, and we have fixed our rates as national minimum rates, that is to say, as far as time rates are concerned they must be rates which are within the capacity of a reasonably managed shop which it is socially desirable to keep alive in the poorest district; but when you come to piece-rates—not piecework basis rates, but piece-rates—you are really fixing piece prices and you are practically always fixing standard rates.

11,446. Do you find that a minimum price for the whole country has a tendency at all to pull down wages where the rates were higher before?—I should say that the answer to that question may be this—that it differs in different trades according to the calibre of the employers you are dealing with. Where you have a large proportion of good employers, no; if you had a large proportion of poor employers with a less degree of responsibility, yes.

11,447. Do you agree that a minimum always tends to become a maximum?—Well, I will qualify my answer in this way. In the case of women and girls any rate that you fix tends to become a standard rate.

11,448. *Mrs. Lyttelton*: That is due to want of organisation on the part of women, probably?—And I think the psychological attitude of many employers towards women's labour as being an inferior type of labour, which they pay at a lesser rate.

11,449. *Sir Arthur Pease*: But not so much with men's rates?—But not so much with men's rates, no. I think I can answer that quite firmly, no.

11,450. *Lord Weir*: Do you think that with regard to female rates there is far less grading of rates than in the case of males in the past?—Do you mean Trade Board industries?

11,451. Industries generally?—I think that probably is true. May I repeat—on the question of why women's wages were so low before the war, the findings in the War Cabinet Committee's Report on Women in Industry—a report which has been very largely shelved and has not received the attention it ought to have received—are really an exhaustive analysis of the reasons why women were paid lower rates than men.

11,452. *Chairman*: It is a very long report, and I daresay that prevents people reading it as they should do?—It is rather a long report, and somewhat technical.

11,453. *Dame Adelaide Anderson*: There was another Committee that reported about the same time?—You mean the Report of the Sub-committee of the Reconstruction Committee on the Employment of Women?

11,454. It afterwards became a Committee under the Ministry of Reconstruction?—That reported in 1917.

11,455. It was 1919. They sent an interim memorandum in 1917, but the final report was in 1919?—That is quite right.

11,456. *Lord Weir*: Just to go back to these ideals and principles that you have laid down here in your Section 2, you do agree that those are more or less abstractions at the moment?—No, I do not. Do you mean paragraph 2 on page 25?

11,457. Yes?—No, I could not say that. I think that is absolutely correct.

11,458. In spite of the industries we have spoken of?—No; I do really think that they are correct.

11,459. *Dame Adelaide Anderson*: Is it not this, that it becomes a necessity for the nation that its members should not go below a certain level?—Well, I think so.

11,460. In the case of women the point was raised that they must share in the depression, but before the war if they were below a certain subsistence level very broadly, then the nation was suffering from that?—Certainly.

11,461. And it is to the interest of the nation to maintain a proper subsistence level, and share and share alike up to a certain point?—Certainly.

11,462. That is, the higher prices must be faced as far as the community can bear them in its own vital interest?—I think so, certainly. I should regard it as a national calamity of the first magnitude if there was a great universal and rapid collapse of wage rates all over the country. I would much rather see wage rates preserved and short time worked. I believe the fact that the rates have been preserved and short time has been worked is one of the reasons why there has not been more serious trouble arising out of the unemployment crisis than there has been, because where there has been more than one wage-earner in the house they have managed to help the household over this appalling crisis. I think it would have been much worse if there had been a general collapse of wage rates all round.

11,463. *Lord Weir*: That is, you do not put any great value on the cost of production?—Well, ultimately the cost of production must govern any rates which are paid.

11,464. *Dame Adelaide Anderson*: It might mean greater cost of production in the end if you let the worker's strength go below a certain margin?—Yes, I think in some cases that might be so.

11,465. And it might mean higher taxation?—It might be so; I could not say.

11,466. *Chairman*: Perhaps we can go on now with your statement. You deal next with the guiding principles determining minimum rates, and you say that no formula has yet been framed for governing minimum rates of wages, and you quote the Corn Production Act?—The definition, or rather the guiding principle—it is not really the definition—which the legislature laid down for the guidance of the Agricultural Wages Board—

11,467. That the Board "shall so far as practicable secure for able-bodied men wages which in the opinion of the Board are adequate to promote efficiency and to enable a man in an ordinary case to maintain himself and his family in accordance with such standard of comfort as may be reasonable in relation to the nature of his occupation." That, of course, gives no consideration to the question of how much a trade will bear?—No, it does not.

11,468. But is not that rather a serious consideration?—Well, I suppose the legislature in passing that meant that the Agriculture Wages Board must aim at that test, apply that test broadly, having regard also to the consideration of what the industry could bear at any given time.

11,469. The Act did not say so?—It did not say so.

11,470. That Act is repealed?—That Act is repealed.

11,471. *Mr. Layton*: Is not it also an important consideration that that Act was passed during the war when the Government was in a position to make a wage effective?—Quite.

11,472. By controlling the cost of living, and so on?—I think that clause was inserted—I was not directly concerned with it, but I was familiar with some of the discussion that took place—with the idea of seeing whether something could not be done by the new Wages Board to give a reasonable standard of life to the agricultural labourer.

11,473. *Chairman*: It was coupled with a guarantee of prices?—Coupled with a guarantee of prices.

11,474. Then you refer to Mr. Rowntree's figures in his two well-known books?—May I make this one correction there? I have given in my evidence that figure of 16s. as comparing it with the 26s. for the

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

men. I have given the figure of 16s. before the war as the Mr. Rowntree's subsistence level. I was not aware until yesterday that while that figure of 26s. for a man with a hypothetical family of a wife and three dependent children is a definite studied figure, arrived at by Mr. Rowntree on what he calls the poverty line standard, the figure of 16s. is not; it has not been arrived at in quite the same way, and I think it should simply be regarded as the lower of Mr. Rowntree's two figures, 20s. and 16s. I was not aware of that, and I am sorry. Mr. Rowntree's figure of 16s., as far as I can see in "Capital and Labour after the War," is arrived at by taking the cost of food, lodging, laundry and clothing, and cutting out the contingencies and recreation. It is a subsistence level.

11,475. He takes the two figures, the poverty figures, so to speak?—Yes.

11,476. Subject to what you have just said?—Yes.

11,477. And then later on he fixes—?—35s. 3d. for a man and 20s. for a woman.

11,478. As being not the poverty line but a reasonable minimum wage?—A reasonable minimum wage.

11,479. *Lord Weir*: That is "The Human Needs of Labour"?—Yes, that is the name of the book. I do not think that figure of 16s. is far out as a poverty line figure, but I am not right in saying that Mr. Rowntree has assessed that figure as a poverty line figure.

11,480. *Chairman*: Do you think it would be possible or practicable to raise all wages in all industries to that level?—To which of Mr. Rowntree's figures?

11,481. To the higher of them?—No, I do not. I am reluctantly bound to come to the conclusion that it certainly would not be possible. No Trade Board figures which have been fixed at any time for the lowest grade of workers, either men or women, have ever approximated to Mr. Rowntree's standard.

11,482. *Mr. Layton*: What do you consider to be the equivalent at the present time?—I give that as at December 1st. When I wrote this draft the cost of living figure at 1st December was 99, and that was the figure at which it stood when all existing rates were confirmed and made effective, and therefore it was an easy figure to take because 100 made a convenient calculation; you had simply to double it. 35s. 3d. would become 70s. 6d. Mr. Rowntree's true adjustment is 71s. 5d. to 1st December.

11,483. And the lower figure becomes 52s. 6.—52s.

11,484. *Chairman*: When you said that the rates do not approximate to Mr. Rowntree's figures you meant to the modern translation of Mr. Rowntree's figures?—Yes.

11,485. Having regard to the rise in the cost of living?—That is at December 1st; it was a convenient time to take—first because all existing effective rates were fixed when the figure was at that level, and secondly that as it was 100 you simply had to double the figure.

11,486. The equivalent in December of his "Human Needs" figure was, I think, 72s. 6.—71s. 5d. If you simply double it by adjusting it to the cost of living index figure it is 70s. 6d., but I am informed by Mr. Rowntree, with whom I communicated a few days ago, that there is, as I thought, a margin of error in applying that method, and if you correct it to Mr. Rowntree's actual calculation, his figure of 35s. 3d. is to-day 71s. 5d. I am speaking from memory, but I think that is right. (*After referring*) I see it is 71s. 5d., and his 20s. is 39s., and his 26s. is 54s. 1d.

11,487. *Mr. Layton*: That is the adult male poverty line?—51s. 1d. is the poverty line figure. Those figures have been furnished to me by Mr. Rowntree's Secretary this week.

11,488. *Chairman*: Professor Hobhouse had these figures too, I think?—That is so.

11,489. Then you pass to the machinery for establishing and maintaining these minimum wage rates, and you classify that machinery under four heads: Collective bargaining in the ordinary way; then collective bargaining through Joint Industrial Coun-

cils, with or without compulsory powers; thirdly, by a statutory minimum wage or wages; and fourthly, by Trade Boards?—That is so.

11,490. As regards the statutory minimum wage for all trades, that you do not approve, I think?—No, I have given some consideration to it. I do not. I think it would be very difficult to fix, and I think if it was fixed it would be absolutely useless. Such a wage would have to be fixed so as to be within the reach of the weakest shop—at any rate the weakest shop which it was desirable to keep in existence in the weakest district and for the lowest grade of labour, and the rate so fixed would afford no protection to the great bulk of the industrial workers in this country.

11,491. And if it were so fixed as to afford protection to the bulk of the workers it would have a serious effect?—It would shut up a large number of shops which it was desirable to keep alive in weaker districts, and I think it would have a tendency to bring down the wages of considerable groups of workers, in all probability, especially women and girls. I agree with the view of Sir William Mackenzie about a national minimum wage, which was appended as a note to the War Cabinet Committee's Report on Women in Industry.

11,492. Therefore upon the whole you think that the Trade Board system is better than the third?—I do. The Secretary will find at the end Sir William Mackenzie's note. It is the last thing in the book.

11,493. As between the Trade Board and the Whitley Council, which do you think is the better, supposing there is a choice between the two?—I am an Honorary Member of the National Council of the Pottery Industry, which was the first Whitley Council to be recognised by the Minister of Labour under the Whitley Report. I am very strongly of opinion that the Whitley Councils will never really fulfil their function intended by the Report until they have Trade Board powers. I think they require the power of making their determinations obligatory.

11,494. Some of them are asking for it?—25 of them are asking for it.

11,495. How exactly is a Whitley Council appointed?—It forms its own constitution entirely. The Minister may advise, but he never does it for them. They form their own constitutions; they decide themselves—of course it only applies to organised industries—what interests are entitled to be represented and in what proportion they should be represented, and they frame their own constitution entirely.

11,496. So it differs from the Trade Board in this, that the Whitley Council has behind it these great organisations which have appointed the members?—Certainly.

11,497. And if a member of the Whitley Council makes a mistake, the members of his great union suffer?—Yes, that is undoubtedly so, and the same is true of some of the Trade Boards, at any rate. It is true of the Brush and Broom Trade Board, for instance.

11,498. Well, the Trade Board, of course, is not appointed by those organisations; it is appointed by the Minister?—But all the members of the Brush and Broom Trade Board were elected by their own organisations in the same way as they would have been if it had been a Whitley Council, and the Minister simply appointed whoever those organisations nominated.

11,499. They were simply recommended to the Minister, and he appointed them?—Yes, I think that is the usual way.

11,500. Does that mean that that trade is a thoroughly organised trade?—It means that the employers' side is very thoroughly organised, but the employees are not so well organised.

11,501. *Dame Adelaide Anderson*: And is it in fact found that women get really well represented in these Whitley Councils?—That I could not tell you. On the National Council of the Pottery Industry there are a few women, but I should say that most of the women in the pottery industries are represented by the male representatives.

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

11,502. Is that a factor of Trade Boards, that the representation of women is particularly provided for?—It is a factor, certainly.

11,503. Being weaker?—I do not think there is an essential distinction between Trade Boards and Whitley Councils in that respect.

11,504. But it is particularly provided for?—It is particularly provided for, and I think would be provided for in the constitution of most Whitley Councils.

11,505. Mr. Layton: But does not your suggestion amount to this, that a majority of the trade would be given legal authority to impose its decisions on a minority, even a very large minority, which might include a slightly different section of the trade?—Yes, that would be the result, and I do not think we are ever going to get any real peace in industry, or any basis of industrial peace, between employers and employed until something is done to achieve that object.

11,506. But is it possible to have the present rather looser way of Whitley Councils creating themselves, so to speak, and giving them legal power? Would not your suggestion in fact mean the gradual spread of the Trade Board system to the whole of industry?—It would mean the gradual spread of Trade Board powers to the whole of industry.

11,507. And power on the part of the Minister to determine representation on the Board?—I think so. Yes, I think he would have to have some influence in the constitution of the Boards, and I think there would have to be a confirming authority.

11,508. Chairman: That is universal wage regulation?—Yes, I think so.

11,509. By a State-appointed body?—I think there must be a State-appointed body. I think there must be some form of that. I have something to say about what I think the confirming authority ought to be. I hold some views about that—but I think there must be a confirming authority; I think there must be a second Chamber.

11,510. Dame Adelaide Anderson: Was it not by Justices of the Peace that that was done for nearly two hundred years under an Elizabethan Statute?—It was so, of course. In certain industries wages were regulated by Justices of the Peace.

11,511. So as to give a sufficiency in times of scarcity as well as in times of plenty?—I suppose that was the object. I am afraid I am not very well up in that.

11,512. Chairman: Do you know with what results?—I do not think the result of trying to regulate wages by Justices of the Peace was very happy; but that is not the authority I should ever have selected.

11,513. Dame Adelaide Anderson: I only wanted to bring out the fact that it was done?—I should have thought it was a very unsuitable body for the purpose.

11,514. Sir Arthur Pease: But the whole Guild system of regulating wages broke down absolutely, did it not, in the Middle Ages?—Yes, I think it did.

11,515. Mrs. Lyttelton: Are not you afraid of the effect on organised industries of a general wage regulation system?—No, I am not. I am very much afraid of what is likely to happen if we do not have it. We have either to face the problem of wage regulation or the continual menace of industrial unrest growing worse and worse as the organisation extends and the resources of organisation improve.

11,516. I hope that is not the only alternative?—I think that was the view of the Whitley Committee, and I think the view was sound.

11,517. Sir Arthur Pease: But have you not heard the same thing every time when there has been a boom in trade, that there would be a state of unrest for evermore? I mean, we have never had such a long period as we have now with high prices during the war, or a boom, and therefore it is exaggerated. Do you not think we shall get back to normal working again?—I doubt it; I very much doubt it. By normal working do you mean the condition of affairs in 1914?

11,518. Normal relationship between employers and employed?—I do not quite know what you mean by normal relationship. The normal relationship before the war was very bad in many industries.

11,519. Immediately before the war it was?—It was very bad, and was getting worse.

11,520. Chairman: I did not understand your last answer. You say that was the view of the Whitley Committee. Surely that Committee recommended that there should be Industrial Councils wherever possible, and that if Trade Boards were established they should in time disappear in favour of Industrial Councils?—As the organisation improved so as to admit of organisation based on free association to take the place of the Trade Boards; but in paragraph 21 they foresaw that it might be necessary to give the Joint Industrial Councils a legal sanction to their determinations, and expressed the view that although they thought that would probably be the case, a movement in that direction had better come from the trades when they were organised in Joint Industrial Councils rather than from the Government; but they foresaw that.

11,521. But as between a Trade Board and the Industrial Council they gave preference to the Industrial Council?—Oh, certainly, and I should give preference to the Whitley Council with compulsory powers.

11,522. Mr. Layton: Plus State appointment?—But if they had compulsory powers I think there would have to be some confirming authority.

11,523. Compulsory powers plus State appointment?—But they would not be compulsory unless there was State enforcement.

11,524. If say State appointment of the members?—I think there would have to be some supervision to see that important interests were not left out, but I should like to see that limited to the very smallest dimensions. The representation of clerks, for instance, on some Whitley Councils has been a trouble.

11,525. Chairman: Then you discuss the question of trade-by-trade regulation and district-by-district regulation, and you certainly favour trade-by-trade rather than national wage fixing?—Yes, I take it that that is the same question in the points which have been circulated, the difference between Trade Board legislation and a national minimum wage.

11,526. I think it really comes to that.—Yes.

11,527. As regards the district rates, you think that there may be a case for them in regard to certain industries, and I think you instance the distributive trades and the making-up trades?—Yes.

11,528. I suppose the case of the distributive trades is much stronger than that of the making-up trades?—I have said here that I have no knowledge of the distributive trades at all, and I prefer to express no opinion about them; and the only retail or making-up trades I have any knowledge of are the laundry trade (which I think ought to be classified in that group), and the retail bespoke tailoring trade.

11,529. In the country trade I suppose that work is capable of passing from district to district?—We tried to work out a differential scheme on the Laundry Board, and eventually we did so. We prescribed a district rate for thirty miles round London from Charing Cross as against the rest of the country; we prescribed a slightly higher rate, I think it was 2s. 0d. a week higher, but I am not quite sure, for that area, and eventually it proved unworkable, and had to be given up. At my suggestion we tried to do the same thing on the General Waste Material Reclamation Trade Board. We were dealing among others with women engaged as woollen rag sorters, an industry on the fringe of the woollen industry. I happen to be one of the umpires appointed by the West of England District Council of the National Wool (and Allied) Textile Industrial Council, and I knew the rates paid to the women woollen workers in Yorkshire were much higher than in the West of England or Scotland, and I suggested the same principle ought to

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

be applied; it was adopted, and we prescribed a different rate for the heavy woollen district as against the rest of the country, and that had to be given up because the manufacturers in Yorkshire objected to pay a higher rate than their competitors in other parts of the kingdom.

11,530. *Mr. Layton*: Is there not a special London rate for practically every important trade, the building trade, for example?—In building that is so; but does not that stand by itself?

11,531. Take other trades, such as engineering. A whole lot of trades have special London rates?—A good many trades do, but some do not. The brush trade does not.

11,532. In fact they do under their own negotiations. Why is it an insuperable difficulty in Trade Boards? I mean, it has been in existence for a decade.—There is in a good many trades, of course, a percentage added on any wage settlement as regards London; there is in the case of the railways, but in the case of the laundry trade—I left the Board before it was really settled, but I do not think my information is far out—the difficulty is when you come to draw your line you will have your laundry inside, and then have their gathering ground outside. That is the difficulty. It happened after I left the Board. I thought it would work, but after I left the Board it was found to be quite unworkable, and the proposal was withdrawn. Why it was withdrawn I cannot tell you, because I had left the Board.

11,533. We constantly get this put forward, but it is so difficult to see why that particular arrangement is impossible in Trade Board work, whereas in fact it is the general practice, I should say, in most highly-organised trades?—So far as London is concerned.

11,534. And so far as other districts are concerned, the building trade has a whole schedule of rates and so has the engineering trade, and so do all the big organised trades?—Yes.

11,535. In none of them is there a general flat rate, practically speaking?—Well, the building trade is of course by itself. You have your local rate; it is on the spot; it is not competing with another area.

11,536. It is not more localised than laundry work?—No.

11,537. And engineering certainly is not. You could place your orders in one town or in another far more than in the laundry trade?—I am sorry I cannot tell you the reason which led to the abandonment of the differential rate on the Laundry Trade Board. It was after I left the Board; but I do know why it was abandoned in the first proposals of the General Waste Materials Reclamation Trade Board so far as Yorkshire was concerned; it was abandoned because the Yorkshire employers raised such a protest against being asked to pay a higher rate than their competitors in the rest of the country, and at their request, and somewhat reluctantly, the other employers withdrew the proposal.

11,538. Were they in fact paying a higher rate at the time?—Oh, yes, that is so, certainly.

11,539. They were?—In some cases; there were no generally recognised rates at all in that trade.

11,540. But they were following the general practice in regard to the general condition of higher wages in Yorkshire; they probably were paying, but their objection was to having it legally fixed?—I have no exact information as to that. I should think that is probably correct, because the rates ruling in the heavy woollen textile industry in Yorkshire were considerably higher than in the West of England.

11,541. *Lord Weir*: Surely the practice is this, in many large trades, as Mr. Layton has pointed out: There is differentiation by district to a very large extent. If you have Trade Boards and you start with the principle of having national minima, then you are making a very big change indeed?—In some districts I suppose you are, and I think in some districts you ought to, because I think in some districts in the country the state of the industrial popu-

lation is a state, or was before the war, of chronic social misery which, if it is possible financially to do it, should be put an end to.

11,542. But that is not a question of district differences there?—Well, I do not know. I had in my mind, for instance, the sort of wages prevailing around Bridgwater in Somerset.

11,543. Surely that was a very comprehensive statement you made, that it would only vary very little on account of district differentiation?—I am afraid I have not quite got the meaning of your question. My attention was distracted at the moment.

Lord Weir: Well, I will not pursue it at the moment.

Witness: I mean there are some difficulties in a case like Cornwall. Cornwall is so far off from the great centres of distribution that I have often felt that a very strong case does exist for a differential district rate for Cornish industries. In Cornwall the engineering rates, for instance, are very much lower than elsewhere, or at least they were some time ago when I was down there, but the great difficulty in most manufacturing industries that I have had anything to do with is that the employers say: "Well, we are all really catering for the same market, and why should my competitor out in the Eastern counties and far down West have the pull over me by having to pay a lower rate of wages?" That is what I hear again and again. We have discussed district rates on every Trade Board I have had anything to do with, and in the end the decision of the whole Board has been against it, except in the case of the Retail Bespoke Tailoring Board.

11,544. *Mr. Layton*: But is it not the fact that in almost all cases he is in fact paying different wages, and he is maintaining his position against the low wage district because in the low wage district, probably, economic development is rather behind; there are probably longer distances to carry his goods when he has made them. Take the Eastern counties, a district away from the power sources, and so on; all the economic conditions are weighted against the low wage districts. As Lord Weir suggested just now, if you imposed a flat rate, if you imposed a uniform wage, you would be introducing a new and disturbing economic element which would upset the existing adjustment of industries between different districts.—Well, the view taken by the bodies of employers with whom I have been associated is this, that so far from being a disturbing economic factor it has been an economic factor which makes for healing and for getting rid of difficulties.

11,545. I did not mean disturbing in the relation between the groups, but disturbing in the localisation of industry and shifting the direction of trade?—I suppose that must be so, to some extent, but again and again when the matter has been thoroughly discussed in all its bearings—it looks very attractive at first sight; it has often attracted me—but when I have heard it discussed I have felt bound to come to conclusions which my colleagues have come to. On the whole they are in favour in manufacturing industries of one national minimum rate for the trade. Mark you, I do not think that applies to the distributive trades; I do not want to speak about those.

11,546. They come to that conclusion in spite of the fact that, in their own special and private negotiations, they accept and have a system of local variation right throughout the country, and not only that but in the wage negotiations in the districts. I think it is true on both sides—it is certainly true on the employers' side—that they are opposed more than anything else to national negotiation. They insist upon a special local determination in accordance with local conditions.—Well, that has not been my experience on the manufacturing boards with which I have been connected. For instance, on both the Brush and Broom and the Hair Bass and Fibre Trade Boards the employers, after considering the matter, have dis-

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

tinctly turned down the district committees; they have decided definitely that the whole evidence favours a national rate, and they have distinctly turned down the proposition of having any separate rate for Scotland as compared with the rest of the country.

11,547. *Mrs. Lyttelton*: Does that include all rates or only the minimum rate?—All rates.

11,548. *Dame Adelaide Anderson*: And is it not so largely just a habit or a custom, this variation in manufacturing industries?—I have often heard it said—

14,549. Coupled with a slightly less efficient rate of output; and is it not to the advantage of the manufacturer in the district where the custom is to build up on a lower wage that their workers should be made stronger and more efficient?—I have heard that reason put forward, amongst others, in favour of it.

11,550. *Lord Weir*: Is it not also the case that those Boards are quite new to their business; that they are only learning?—Well, that would not apply to the Brush and Broom Trade Board, which came into existence in 1919, nor would it apply to the Hair, Bass and Fibre Trade Board.

11,551. That is not a very long period?—It is not a long period, that is quite true.

11,552. Have you had examples on any of your Boards where you have dismissed the idea of differentiation and have afterwards required to take it up?—No, I do not think I have. I have had the converse case, where we have taken cognisance of district differentiation, and then have had to drop it.

11,553. I think there were some Boards whose experience has been the other way.—May I make myself quite clear, so that there shall not be a misunderstanding? With regard to Bespoke Tailoring, a making-up trade; I am on that Board, and I think that is quite different. I think a case is undoubtedly made out for differential rates in bespoke tailoring. Mr. Gordon and Mr. Adams dealt with that in full before this Committee, but I do not think they brought home to the minds of the Committee that the Board is earnestly considering that at the present time, and has been considering it for some months. It is quite true that on two occasions a motion in favour of differential rates has been voted down by the votes of the appointed members, but not because the appointed members did not approve of the principle of district differentiation; it was because, in their opinion, the proposals put forward by the employers were absolutely unworkable; and we are now trying to get a workable basis, and I think we shall get it.

11,554. *Mr. Layton*: What Board is that?—The Retail Bespoke Tailoring.

11,555. *Sir Arthur Pease*: Is it not a fact that where you have a Board, and a great part of the industry is carried on in a centre like the woollen industry in South Yorkshire, that they practically control the whole thing, and would overbear the small districts in the West of England—that the small districts would hardly get their full crack of the whip?—Well, that is what I was afraid of when, as Chairman of the Waste Trade Board, I suggested that there was possibly a ground for differentiation as regards the heavy woollen district and the rest of the country, and I still think that that is sound, but at the employers' request it has been abandoned.

11,556. But I should far rather, if I were a workman, work in the West of England than in Bradford, even if I got a little higher wage in Bradford?—I agree with you; but I am afraid that must be prejudice, probably, because I live there! I live at Bristol.

11,557. *Mr. MacCollum Scott*: Is it not the case that if you fixed a national minimum wage it would probably be lower than it would be in the highest districts if you fix a district rate?—Certainly, it must be.

11,558. That would account, from the employers' side, for a large number of them preferring a national

wage?—They might in some cases, but I do not think that is the reason which has animated any of the employers I have been speaking about.

11,559. Following on that, what was the attitude generally of the workers' representatives with regard to the question of a national or a district wage?—They were always all in favour of a national, as against a district rate—always. It is only with the greatest difficulty that we have I think at last got the workers' side of the Retail Bespoke Tailoring Board seriously to consider a question of working out a differential scheme. They are now really earnestly trying to co-operate with the employers and the Appointed Members to make a working scheme; but it was very difficult.

11,560. *Mr. Layton*: What are the grounds that brought them to that view?—They have a very strong sense of craft consciousness. They are very proud of their trade, and they feel it is being killed by the wholesale houses, and I am very sorry for them; I think they are in a difficulty. They have come to the conclusion that there is a case, that if they are to maintain anything like a decent rate for the real skilled tailors and tailoresses in the towns, they must have a lower rate for skilled tailors and tailoresses in country districts.

11,561. They are having the lower rate to prevent the shifting that would otherwise be brought about by a flat rate?—Quite, but the difficulty we are up against is this: the real basis of differentiation is not district and district; it is between different types of shops in the same district.

11,562. *Chairman*: Is not the conclusion this, that you would certainly not make District Committees compulsory, but you would leave the matter to be determined by each Trade Board?—Oh, certainly. I need not deal with this because the Committee understands; but I think the present position of District Committees is much too hard and fast; it wants to be more elastic. People are afraid to set them up because if you set them up you cannot get rid of them.

11,563. *Sir Arthur Pease*: Is not one of the functions of the District Committees to bring the two sides closer together?—Yes; I think one of the great difficulties of the present Trade Board system is that it is too aloof and too far from the provinces. I think something ought to be done to bring them into closer contact with the country, and I think if District Committees could be worked that would be a very important function, and would be performed.

11,564. Because where employers have taken the trouble to get into personal touch with the employed, things have worked very much better than where they have not done so?—It is absolutely essential that they should get into close touch, otherwise misapprehensions are bound to arise.

11,565. And you cannot do that if you centralise them in London?—I think that is quite true.

11,566. *Chairman*: Then you pass to the principles on which minimum rates are settled by the Boards, and I think the effect of your statement is that there are no such principles?—No definite body of theoretical principles. No definitive theory of wages exists.

11,567. The whole position is considered: the cost of living, what the trade will bear, what is paid in other trades, and so on; and then you come to your conclusion?—It is negotiation of a special type, but it is negotiation. I have tried to gather together, as I thought it might interest the Committee, in paragraph 8 of Section 2, some of the factors which I think guide the Trade Boards in coming to a decision. I have not attempted to range them in order of merit.

11,568. Those are factors, some of which I have mentioned?—If your Lordship please.

11,569. Then there is a reference to a sliding scale?—Yes.

11,570. You have on one of your Boards considered the question of sliding scale?—No, my Lord, I have not; we have attempted to discuss, we have begun to discuss, a possible sliding scale on the Waste

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

Trade Board, but we have not proposed one, and have not got far with it.

11,571. Has not the Coffin Furniture Board considered that?—I am not on that Board. I give an example of the first Board that has issued a proposal in the form of a sliding scale. It seems to be well considered. Much the most interesting suggestion is one which is under consideration at the present time by the Paper Bag Board, which I have given as an example in my statement. It is a very interesting proposal.

11,572. Yes, I have the Coffin Trade Board suggestion.—It drops 2s. for every 12 points, I think, does it not—the women's rate?

11,573. 13 points, I think?—It may be 13 points. I have it here. I see it is for every 12 points.

11,574. We are both right, I think. The upper line is every 12 points, and the lower line seems to be 13?—That is so. I was looking at the other one.

11,575. That is, as you say, a very interesting proposal?—It is a very interesting one.

11,576. *Mrs. Lyttelton*: In what way does the Paper Bag proposal differ from this?—In this way. They are proposing this very ingenious device: they are providing for a 4 per cent. drop in wages for every 5 per cent. drop in the cost of living, so the result is that as the figure goes down the real wage goes up. It is most ingenious. They are taking 100 as their datum line, and for all falls below 100 that applies. If it goes up above 100 then the wage goes up in exact proportion; but for all falls it goes down 4 per cent. for every drop of 5 per cent. So that as the scale operates the real wage goes up, and they will arrive at zero, pre-war cost of living, at a wage rate between 15 and 30 per cent.—it varies in some cases—above their old rates.

11,577. They calculate on that basis?—They calculate on that basis so as to give a definite enhanced standard of living when zero is reached.

11,578. *Lord Weir*: You get an equivalent result by fixing a portion of the wage and making the other portion of the wage fluctuate?—Yes. I should say that that really is the position at the present time, that one has got to regard every wage figure at present as containing two elements, a permanent wage and a bonus owing to cost of living on the top.

11,579. *Mr. Layton*: But this particular scheme is in effect adding 20 or 30 per cent. to the base wage ultimately?—Yes, they have there. The great difficulty of getting a cost of living sliding scale is to get a new base rate, because the rates for women were so low before that they cannot be taken as a basis of comparison.

11,580. *Lord Weir*: Is it not also complicated a little by the change in the hours?—Yes.

11,581. That is a very valuable and important point that is not brought out here in any of these?—?—I had to deal with that in the West of England when I settled the wages in the Woollen Textile trade. We had first of all to adjust the whole of the pre-war rates to the change in hours, and that is a very important factor.

11,582. And one which is very frequently forgotten?—Very often forgotten, yes.

11,583. *Chairman*: Where do you draw the line in some of these cases? On what date would you alter the rate?—The view of the Minister, as I understand it, at the present time is that the Board cannot do that; it is really under the power to fix successive rates which is contained in the Act, to fix what they call a series of rates, and you get your period by fixing your date periodically, by taking the cost of living between 101 and 113; between those figures one rate operates, and when it moves to 100 then a new rate operates. You do not get fixed dates; they say they cannot do it under the present Act.

11,584. Then it moves on publication of the new index figure?—That is so. I do not know whether this provides that this new rate is to come into operation on the day the publication is made. I think that ought to be done.

11,585. *Lord Weir*: It is practically a dodge to get

round the Act; this system is a dodge to get round the legal decision?—Oh, no, I do not think that is so. So many of the Trade Boards have been pressing, or the employers have been pressing for Trade Boards to issue Orders in the form of sliding scales, that a great deal of enquiry has been made to see whether it could be done under the Trade Board Acts. At one time the Minister thought he could not do it; then he was advised that he could do it in this way.

11,586. *Sir Arthur Pease*: The sliding scale is based on the cost of living only?—Yes, but as a matter of fact, it could be adjusted to any standard. It does not matter what you take as your measuring rod. In this case it is the cost of living, but it might, of course, be prices.

11,587. *Chairman*: This is a change by time; that is why I suppose you can do it. You can fix successive rates of wages, and therefore you can say the rate should be so much during the period for which the cost of living falls within certain limits, and then another during the period in which it falls within another limit.—Yes, it does in fact fix a period of time.

11,588. And I see the date is fixed by these; it is payable from the first pay day in the week following the 20th day in each month?—That is so.

11,589. That, I am told, is the date on which publication of the Labour Gazette generally takes place?—That is so; it comes out about the 20th of the month, giving the figure as from the 1st of the month.

11,590. *Sir Arthur Pease*: Then if all wages were regulated by this system, everybody would get about 30 per cent. more when conditions were the same as compared with before the war?—Not on this one. I do not know how this works out on the Coffin Furniture Board; I have not worked it out. On the Paper Bag Trade Board they have not got a proposal out yet; they are still considering it. What they have done is this. First of all, before they talked about the sliding scale, they definitely fixed a new basis rate to which they were to slide, which is based upon a certain percentage increase on what they were paying in July, 1914. It works out at about 25 per cent. up.

11,591. If that scale was adopted by all the Trade Boards of the country you would have the wages permanently 25 per cent. above the pre-war standard?—Yes, and I do not know that you could do that.

11,592. I am afraid you could not.—I am afraid you could not do it.

11,593. *Dame Adelaide Anderson*: Would that mean another proposal when the time was reached?—Yes. Still, if it would not work they would simply have to cancel it and issue another proposal.

11,594. *Lord Weir*: Of that 25 per cent. approximately 15 per cent. is due to hours?—Yes, in consequence of the reduced hours the hourly rate, of course, has automatically gone up. It has gone up in order to meet the reduced week.

11,595. *Chairman*: Then you mention piecework basis rates. They are usually so much per cent. above the general minimum?—Yes.

11,596. *Mr. Layton*: The 25 per cent. is not merely 25 per cent. in hourly rates; it is 25 per cent. in weekly rates, certainly, in this case that you are referring to?—May I just refer to it? I think it is in the hourly rate; it is in order to yield a weekly wage, I think, about 25 to 30 per cent. above what was actually being paid in 1914.

11,597. Yes; so that the hourly rate would be a very much higher increase than that?—Yes. I am giving that information on the information of Mr. Foster Robinson, who is the leader of the employers' side of that Trade Board, and who told me about it the other day. He is one of the authors of it.

11,598. *Chairman*: Then you deal with methods by which rate settlements are reached. I think we follow that.—Would you mind giving me the page?

11,599. I have got to page 11. You say it depends very much on the personnel of the Boards. Then you indicate the classes of questions which have been settled by agreement?—I desire to draw attention to what I have said on page 12 there, in view of some of

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

the evidence which the Committee has had previously. I think it is rather a remarkable record that on the Brush and Broom Trade Board we have taken altogether 122 decisions with regard to rates, and of those, 110 have been arrived at by complete agreement; and of the remaining 12 which have been decided by votes, only 3 have been decided by the votes of the Appointed Members.

11,600. That is a particularly good Board, I think?—It is a very good Board, of which I am proud to be Chairman.

11,601. *Sir Arthur Pease*: Then they do not vote by sides?—No, those 8 votes have been cross-voted.

11,602. Is there cross-voting both ways?—No, I think the cross-voting has been on the employers' side there.

11,603. Have you ever known a case of cross-voting where some of the workmen have voted against other workmen's representatives?—Oh, yes; it happened at the last meeting of the Retail Bespoke Tailoring Trade Board. It just did not happen on the Hair, Bass and Fibre Board. It did not go to a vote, but if it had gone to a vote there would have been cross-voting there. I was so informed after the meeting.

11,604. *Mr. Layton*: Do none of the Boards have, as a rule, side voting? Have they adopted the side voting?—No, none of them; they are all against it.

11,605. *Chairman*: It depends on the Regulations, I think?—It has to be in the Regulations. The Bespoke Tailoring Trade Board, or rather the employers there, have expressed a view that in time they would like to have side voting; but I do not think it is in our Regulations. It has never arisen on the other Boards. On the Hair, Bass and Fibre Trade Board we have had exactly the same sort of experience. We have taken altogether 22 decisions, and only 3 of those have been taken by contested voting. All the rest have been arrived at by agreement.

11,606. Is it not 25 decisions?—I see it is 27 decisions; I am sorry. Twenty-seven decisions, and of those 24 have been taken by agreement.

11,607. I cannot make those figures add up?—I beg your pardon, it is a misprint. It should be 27 decisions, and 24 have been taken by agreement. I desire to alter a word there. I say, "adopted 27 resolutions"; it should be "taken 27 decisions," because I have calculated, amendments, which are not resolutions. That is why I alter the word.

11,608. Then you refer to a statement by Mr. Gordon Stammer, and Mr. Ashley Ward?—Yes, I do.

11,609. Which was dealt with by Mr. Willis this morning, to the effect that the practice of the appointed members is to take up the attitude: "If you do not agree the figure we shall vote for the other side." Have you ever known anything of that kind?—Never anything of that sort; and I must say I do take very strong exception to the evidence given by Mr. Ashley Ward about the proceedings on the Waste Trade Board. With the permission of the Committee I should like to put in a statement, because Mr. Ashley Ward's evidence from beginning to end was full of the most amazing inaccuracies. I cannot understand how such statements were made. For instance, he told this Committee that he had taken part in 24 full days' debate in attempts to arrive at a settlement. He has only attended six meetings, and I notice that Mr. Ashley Ward gave the impression, in answer to a question by your Lordship, that the rate for scrap metal had been first proposed in January, confirmed by the Board, referred back by the Minister for re-consideration, again proposed in August, again confirmed, and again referred back. It is not so; nothing of the sort has ever happened. It has never been referred back, and it has been confirmed by the Minister. It was confirmed on the 25th January. It has never been referred back at all, and it was never proposed twice; it was only proposed once, in August. I cannot understand how Mr. Ashley Ward made such a statement. I have dealt with it somewhat fully, and I desire the permission of the Committee to do so, because very great publicity has been given to Mr. Ashley Ward's evidence. It has appeared in the trade journals; it has been the subject of

speeches; and it has been spoken of as a grave indictment of the Trade Board system; and it has been mostly founded upon very inaccurate statements. I think I am entitled, in view of what he said about the appointed members, to refute it. With regard to the question to which you just drew my attention—

11,610. Do you desire me to go through this statement with you?—No, I do not think it is necessary for you to go through the statement with me, because it is simply a pure question of fact; but with regard to that last statement, to which you have just drawn my attention, in regard to Mr. Ashley Ward's statement as to the proceedings of the appointed members, I have put in an additional memorandum, an addendum, because on the 12th January I wrote to Mr. Ashley Ward and asked him to give me particulars as to his allegation. I asked him to give me particulars of the appointed member who had made the statement, the date when he said it was made, and the rate under discussion. I did not get any reply from him until the 28th January, three days after I sent in my evidence, so I have put in a supplementary memorandum and exhibited the letters, and, as you will see, Mr. Ashley Ward has not persisted in his statement. He says he never made it, and makes another statement which is of a different character altogether, to which I take no exception at all. I think your Lordship has that before you.

11,611. What Mr. Ashley Ward's letter comes to is this, that there never has been a case where the appointed members have tried to force a resolution?—Yes, he says it never has occurred, but I am afraid that is the view which the Committee must have formed, of what Mr. Ward meant when he said he supported Mr. Stammer, and said it happened on the Board that the appointed members had said to them: "The workers have proposed such-and-such a rate; you have offered such-and-such a rate; we cannot vote for your figure, and if you will not come to this mean rate we are going to vote for the higher." I notice that when Mr. Stammer was giving evidence that was the impression made on the mind of Mrs. Lyttelton, and I think you must have understood Mr. Ashley Ward to mean the same thing. Now he says nothing of the sort ever happened, which is true.

11,612. I think the statements of Mr. Stammer and Mr. Ashley Ward are printed in our evidence?—They are.

11,613. You would like these memoranda also printed?—I should.

11,614. Then you pass to the rate-fixing powers of Trade Boards?—May I just say this, in order to make one correction in the memorandum which I have lodged with reference to Mr. Ashley Ward's evidence. It was filed on the 25th January, and you will notice that in it I have said that the rate for the scrap metal workers was still under the consideration of the Minister. I was not aware that he had confirmed the rates on that date; they were confirmed that very day. I am informed that they were confirmed on the 25th January and come into force on the 1st March.

11,615. What page is that?—I have stated in the course of the memorandum that the rate which Mr. Ashley Ward was discussing, the 55s. rate for the scrap metal workers, had not been referred back, but was still under the consideration of the Minister. That was so when I drafted my evidence, but the rates have subsequently been confirmed.

11,616. Yes, I have that; it is in paragraph 5 of your memorandum.—All the rates proposed by the Board in August have now been confirmed.

11,617. Then perhaps you will go to the question of the rate-fixing powers of the Trade Boards. That is page 14. You say that the power should extend to fixing minimum rates for all classes of workers?—Yes, I do. We have never had the least difficulty on this ground, the difficulty about superior grades of workers on any of the Boards with which I have been connected, except upon the Retail Bespoke Tailoring Trade Board, where there is a great difficulty.

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

11,618. On such questions as the cost of living, and so on, I take it that a gentleman like yourself and other appointed members may be very good judges, but do you think you are equally good judges upon the question of the value of skilled labour of a particular class?—My answer to that would be this: In the abstract, No, I think not; but when we sit and listen to the arguments of both sides, and if the negotiations between the two sides are conducted properly, ultimately it is only a very small margin of difference, it may be a farthing an hour, which divides the two sides, and which cannot be bridged, and it is only upon that that the appointed members ever have to vote. I have never known a vote upon skilled rates by appointed members upon any large margin of difference; and I may add this, that some of us have been chosen sometimes by employers or workmen, and sometimes by both, to act as arbitrators to decide precisely this same sort of question, and if we are considered competent, having heard the arguments, acting in a quasi-judicial capacity, to fix such rates when acting as arbitrators, I cannot see why we are any less capable of dealing with the same propositions when sitting on Trade Boards with a trade with which we are thoroughly conversant.

11,619. *Lord Weir*: Surely, as a rule, you have only been asked to fix rates affecting a comparatively small number of workers?—Well, I was asked by both sides of the West of England District Council of the National Wool (and Allied) Textile Industrial Council to fix the whole of the rates for the whole of the woollen textile industry throughout the Western counties, and doing away with the differential rates between the four districts, and making them one district.

11,620. But that was merely for a district, and what you fixed had no statutory validity?—That is so.

11,621. But surely that is a very different thing?—No.

11,622. *Chairman*: Surely a penny an hour may be a tremendous difference to a trade?—I said a farthing.

11,623. I say a penny. If you make a mistake, it cannot be remedied; the employer has no recourse unless he can get the rate altered if he does not pay that sum. Take the Boot and Shoe Trade; take the sum of 74s., I think it is, or something like that, for certain skilled work; if an employer pays a man 73s., the man being willing to take it, he is subject to prosecution?—Yes; I feel that difficulty.

11,624. It is a tremendous power, is it not?—Yes, but, my Lord, what is the alternative? If there is not to be some means of fixing some sort of wage or standard for those folk, how are they to be fixed? The only way to fix them as the Unions become organised is by free negotiation between associated employers and associated workers, which ultimately means the threat of the strike or the lock-out behind it. To my mind the most important question in the handling of this is to secure industrial peace, and to remove from industrial concerns the threat of industrial strife. One of the great things that the Trade Boards have done is to prevent that sort of trouble. I only know of two strikes in the whole of the Trade Board industries, and they were very small and local.

11,625. You have got very much beyond the sweating legislation?—Yes. I think the 1918 Act was not only dealing with sweating.

11,626. You will give to these few selected trades an organisation which the great trades have not got, and never will have. You give them Boards appointed by the State, paid by the State, with power to fix rates which are enforceable by the penal law?—Yes, I know; I feel that; but 25 of the bigger industries, at any rate, which have Joint Industrial Councils, as your Lordship knows, are pressing the Minister to institute legislation to give them the same powers.

11,627. They are pressing, but they have not yet obtained it?—That is so.

11,628. *Lord Weir*: What was the big difference between the two Acts? Surely in connection with the establishment of the Trade Board for a specific trade; it did not change the duty laid on the members of the Board?—No, it did not. I think the difference between the two Acts which some of the witnesses have emphasised here is wrongly conceived. So far as the principle of the two are concerned,

there really is no essential difference. The difference lies in the desideratum which moves the Minister, as to whether he is going to bring a Trade Board into existence or not. Under the 1909 Act the matter which he had to consider was whether the wages were so low that there ought to be a Trade Board. Under the Act of 1918 the question is whether the state of organisation provides an effective means for the regulation of wages.

11,629. But once the Board is established, the new Act does not change the duties of the members of the Board?—No, I do not think it does in substance. I think the difference between the operation of the two Acts which has been emphasised before this Committee is misconceived.

11,630. *Chairman*: Then if your view is right, these 50 Boards may grow into 200 or more?—Why?

11,631. There must be a network of Boards covering the whole country and regulating the wages of all grades in all trades. As an economist, do you think that a desirable thing?—I think it would be. I feel myself that some step in that direction is essential if industrial peace is to be attained. The alternative seems to me to be nothing but associations of employers and workers drawn up for battle, and when they cannot agree paralysing the nation with successive stoppages.

11,632. Is it not a fact that as organisation grows, as it has grown, disputes do not become more, but less?—But when they do occur they become more devastating.

11,633. *Dame Adelaide Anderson*: In the cotton trade, which is one of the oldest and most organised, they have had very few disputes, have they not?—Very few.

11,634. The further back you go it does seem as though you get the better avoidance of strikes?—But the cotton trade is very highly organised. I always understood that its wage basis is very thoroughly organised and regulated.

Mrs. Lyttelton: That is Dame Adelaide's point; that it happens when you have a highly organised trade.

11,635. *Dame Adelaide Anderson*: And where you have a real understanding, which goes back a very long way, in my recollection?—And a real understanding arrives when you do bring people together to engage in mutually constructive work round the same table, and they get confidence in one another. Unless you bring people together face to face so that they can really learn one another's difficulties and learn to respect one another, then you have not any basis for industrial peace; and the Trade Board affords that opportunity.

11,636. *Chairman*: So does the Whitley Council?—So does the Whitley Council. I regard the Trade Board as the complement of the Whitley Council in partially organised industries.

11,637. *Mrs. Lyttelton*: You do not think that if you merely safeguarded the minimum rates all over the country you could safely leave the skilled rates to negotiation?—No, I do not think so. I think that in many cases, especially in the case of women and girls, the tendency of fixing minimum rates would be to bring down the rates of more highly skilled workers. I appreciate this point. May I give an example of how fixing simply one minimum rate would work in two of my Boards? In the Hair, Bass and Fibre Board, which is a tiny Board, and in the Brush and Broom Board, which is a bigger one, in each case you have on the men's side a very small number of labourers and a very small number of quite unskilled women, in both cases quite tiny numbers. If the powers were restricted as has been suggested, we should have simply power to fix a rate for those very small, practically insignificant, numbers of people, and the real operatives would be without any protection at all.

11,638. Except organisation?—Except organisation; and the whole *raison d'être* of a Trade Board is that that organisation does not exist.

11,639. *Chairman*: Is there not a way out of that: that the Board should be authorised to fix minimum rates for the lowest class of ordinary worker in the

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

trade, and possibly to fix a different rate for what I call the auxiliaries—the labourers whom you have just mentioned?—That would be better, but I think that the tendency of that would be certainly to lower the occupational rate of the more highly skilled workers, especially in the case of women and girls. Whatever rate you fix for women and girls tends to become the standard rate, however careful you may be.

11,640. *Dame Adelaide Anderson*: You mean it would be brought down from above in order to recoup the trade for paying higher wages?—Possibly.

11,641. *Sir Arthur Pease*: Before the war, in the organised trades where they had a labourers' rate, was not the tendency for the higher branches of the trade to go up and up—I mean in the more skilled parts?—I should not like to attempt to answer that question, because I had really very little experience outside the Insurance Act before the war. I could not tell you.

11,642. During the war it has been the general tendency to level up the lower paid men on account of the cost of living?—I think too closely.

11,643. But before the war the difference seemed to be getting greater?—That may be so.

11,644. *Mr. Layton*: I should like you to develop the point which you make, where you say that a wage rate for women tends to become a single actual standard rate, in view of the fact that differences exist apart from organisation. Is it not organisation which has brought these differences into existence?—No, but from the sort of picture which I have in my mind from reading objections, I am inclined to think that as soon as you have a Trade Board rate, or any other rate, fixed, which is definitely fixed, a good many of the employers immediately say that that is the rate, and they are not going to pay anything much above it. I had a case the other day; I cannot explain this, I simply tell you what happened. An employer said to me: "If this Trade Board brings this rate into operation, I shall bring my rates down to it at once. At the present time I am paying shillings above the rate which the Board is proposing, but if the Minister confirms this rate I shall bring my rates down to that rate." I said: "Why? What for? At the present time you have a free market, and you can practically pay these people anything you like, because of the economic crisis at the present moment; but you are paying them 2s. or 3s. above what we are proposing. Why should you bring that rate down?" He said: "Well, I shall," and that is what happens; any rate you fix tends to become the maximum.

11,645. *Chairman*: You say that is what happens, that is what a man says will happen?—My Lord, it happens; it happened in the brush and broom trade.

11,646. *Mr. Layton*: Why was he paying higher rates before?—That is what I want to know. That is the rate that he was prepared to pay, and could afford to pay.

11,647. *Lord Weir*: Would it not be better to leave him to pay it, and not to change it?—So far as he was concerned, yes; but having regard to the rates which were paid in that industry in other parts of the country, certainly not.

11,648. *Mrs. Lyttelton*: It is an argument really for raising the Trade Board rate?—I do not think that in that case it was.

11,649. *Mr. MacCallum Scott*: Was his action a protest against raising the wages paid by his competitors?—I do not know. I have often tried to understand why he made this remark, but he did. I simply instance it as an interesting thing that happened.

11,650. *Mr. Layton*: But there is no new factor introduced by the Trade Boards which would diminish the reason for paying a higher rate?—No rational factor that I know of.

11,651. Usually rates are fixed for some economic reason. Would not the economic influences continue? I assume, for instance, that a man pays a rate of that kind because he finds that at that rate he gets the labour that suits him—the labour that does the

work well—and that he can afford to pay, and so on. Various considerations come in?—Yes.

11,652. Would not those still operate?—I think they would in some cases. I do not think they would in many others. Once you get a rate fixed, it is regarded as the rate. Let me give an example. The other day I came across an article in a trade paper which was frightfully angry because the trade union at Liverpool was agitating to get a rate for Liverpool higher than the Trade Board rate in the industry. It was put forward as being a perfectly outrageous action that when the Trade Board had fixed a rate for the whole country a trade union in Liverpool, a big town, should try to get a higher rate. It was asked: What was the good of having a Trade Board at all if they were going to get higher rates than the Trade Board fixed?

11,653. *Chairman*: I do not know who said that, but we have had many cases of unions exacting higher rates, and getting them.—That was an article in a trade journal the other day, and that is the sort of factor that one has to deal with.

11,654. I think the trade unions would know how to deal with it?—Quite. Of course it is a ridiculous argument.

11,655. *Dame Adelaide Anderson*: But it does not have an effect in industries where you have unorganised women. I mean in the big organised industries they can deal with it?—Yes, quite so.

11,656. But it is a common attitude, is it not, that so much is a woman's wage?—Certainly.

11,657. And if she earns more on her piece rate her piece rate had better come down?—Yes. I once knew a case where a woman was sent home on Friday if she earned on piece rate more than a certain figure which was regarded as her figure for the week. If women earned more, home they went.

11,658. *Chairman*: We have kept you a long time; perhaps I can take the rest of your statement rather more shortly. In paragraph 21 you deal with the time required to alter a rate?—There is one point, if I may just emphasise it before you part with that, about that question of not giving any jurisdiction except over the lowest rate, a point which I regard as of very great importance. It would destroy the control of the Trade Board over piece rates. As your Lordship knows, that question of the greatest causes of friction in the past, I am sure that the relative peace that we have had in the Trade Board industries has been very largely due to the fact that by fixing a piecework basis rate or a piece rate we control the cutting of piece rates and remove that grievance from the minds of the workers. If this proposal were adopted which would give us no jurisdiction at all except over minimum rates, our power to help industrial peace by controlling piece rates and thereby preventing unfair rate cutting would be taken away.

11,659. *Lord Weir*: If you had the power of fixing a piecework basis time rate only, that would prevent it?—In some piecework industries, of course, that would help. I may say that on the Boards with which I have had anything to do, apart from the Retail Bespoke Tailoring Trade Board, we have not had any difficulty about fixing rates for skilled workers. I have not known of a case where we have had to vote in favour of a rate.

11,660. Does it not strike you as rather strange that it is possible to fix, say, in the Brush and Broom Trade prices for doing that very large scale of operations?—Piece rates?

11,661. Yes.—You see the brush and broom trade is essentially a piecework industry. The time rate is relatively unimportant. The whole thing is on piece-work, and always has been from the start.

11,662. Does every brush and broom maker make his brushes and brooms exactly in the same way, and with exactly the same facilities?—To a very large extent they have standard methods, yes.

11,663. You do not get anyone saying: "We want a special rate because we have a special way of making them"?—I have never had such an application; or rather we had one, and after discussion it was dropped. When we have such an application we have

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

power under the Act to fix a special piece rate for that employer.

11,664. Yes, that is so?—May I say that the piece rates which we adopted on the Brush and Broom Trade Board were adopted on the suggestion of the employers, and were adopted in every case by agreement, right through. They felt that to get rid of the difficulty of each employer having to worry about fixing a rate for every worker, having regard to the circumstances of his factory, and to get rid of the difficulty and the uncertainty of a test of the ordinary worker in the circumstances of the case, it was much better to have a national piece rate list.

11,665. Mr. Leyton: Could you not get the same result if you had that national piece rate list agreed upon on the Trade Board, but nevertheless the legal sanction only applying as though you had fixed a piecework basis time rate—or even a minimum time rate, but, say, a piecework basis time rate, because really that is the point?—Simply enforce the piecework basis time rate?

11,666. Yes, the piece rates being discussed and agreed upon by the Board?—Voluntarily?

11,667. But not legally enforceable rates?—But then the trouble about that would be this, would it not, that it would be all right so long as decent employers played the game, but they would be at the mercy of the man who did not play the game.

11,668. Is it not the point that this would meet the objection which you just made to Lord Weir that the other firm would have to fix its own rate for the ordinary worker? You would go over that if you fixed a piece rate by agreement, because although somebody else might have different piece rates, in fact, you would always have the schedule to which you could refer, which would get over the difficulty?—Yes.

11,669. And you would enforce the spirit of the Act by ensuring that the ordinary worker got the piecework basis time rate?—If the employer paid the scheduled rates, he would be quite all right, quite irrespective of that; is that what you mean?

11,670. Yes, the inspector would know that this rate would yield to the ordinary worker the piecework basis time rate?—You see the advantage which the employer has got if you have a piece rate list, which I agree are standard rates and piecework prices which are not minimum rates at all, I agree; if you have a list, as we have in the Brush and Broom Trade Board, he is not concerned to see what the worker earns; so long as he pays the price he is free of all responsibility under the Act, and he has not to trouble himself whether the rate yields, in the circumstances of the case a certain figure; he is not bound to do so.

11,671. And ought he not to do so? Is not the object of the Act that the worker should get minimum earnings?—To establish a reasonable standard of life for the industrial population, yes.

11,672. And the way in which the Act provides for that in piecework industries is by the device of the piecework basis time rate?—Yes.

11,673. If you stopped there you would really be fulfilling the function of the Act?—Quite, but I think the intention of the Act was also to help secure industrial peace by providing machinery for the effective regulation of wages, and I regard the power, in a proper and suitable case, where it is a piece-work trade, to fix definite piece-work prices, as a very valuable power indeed.

11,674. But I took you up on the argument which you used just now, that if you did not fix piece rates you would be subject to the difficulty of having piece rates constantly cut?—Yes.

11,675. The protection against that is having a piece-work basis time rate?—So long as we have a piece-work basis time rate we have adequate protection against rate cutting.

11,676. Yes, that is my point. Therefore, it is not necessary to fix piece rates in order to get the protection of the Act?—No, but the great object of fixing piece rates is to simplify matters and save the employer having the work and responsibility of fixing his prices and working out his prices so that they shall yield the piece-work basis time rate.

11,677. But you agree that you can get that by a discussion across the table, without any legal sanction, do you not?—I should like to think that out. You could get it done.

11,678. I mean you could get your schedule worked out?—Yes, you could get a schedule done. Of course, we did really work out this schedule with a particular piece-work basis time rate in our minds by which we tested all the prices.

11,679. Chairman: Now we will go on to your next point. I am going to take you quite shortly about time. You think that four weeks for objections in the case of the first rate should be enough, and three weeks for proposals to vary?—Yes.

11,680. And that the Board should be empowered to bring a variation into force at once without allowing any period for objections? That is rather dangerous, is it not?—Really what I mean about that is this: it seems to me that where you have got a small matter—an alteration, a variation or correction of a mistake—it is perfectly dreadful to have to go through all this tedious process of issuing a proposal and waiting two months for objections, and so on and so on. Let me give you an example of what I mean. We made a mistake on the Brush Board; it was not a clerical mistake; it was a mistake of $\frac{1}{4}$ d. on the wage rate in grading a juvenile scale. We could not correct that without issuing a new proposal; we had to wait until we issued a new proposal and we had to go through all this tedious business of waiting for objections. We want now on the Hair, Bass and Fibre Trade Board immediately to bring into operation a reduced scale of piece-work prices for the home-worker hand-loom weavers, who are working in their homes in the Eastern Counties. They are exposed to keen competition; it is a dying industry; we do not want to kill them; we have fixed very low rates as it is, but they have come to us on the Board and said: "We want even to reduce those by 10 per cent., because we cannot compete with the factories." We want that brought into operation at once, and the employers want to bring it into operation at once, but we have to wait two months after issuing a proposal, and four months have to go by before relief can be given to those workers. It seems a great pity, and it is unnecessary.

11,681. If you are going to allow that, must you not apply it both to raising and to reducing rates?—Yes.

11,682. If you are going to raise rates without notice, will not that put the trader into a difficult position?—If you have a confirming authority—let me use that neutral expression for a moment, without saying what form of authority—would there be any objection, in a case where the Board was agreed, to saying that you could bring an alteration of that sort into operation at once in a minor matter, with the consent of the confirming authority, in exceptional cases?

11,683. If it were agreed on the Board?—If it were agreed on the Board, I should limit it entirely to agreement. I really think that is necessary, with the consent of the confirming authority as a safeguard. We had some difficulty in altering the ratio of journeymen to apprentices in the apprenticeship scheme on the Brush Board, too.

11,684. Then you say that the Board should have power to give effect to objections lodged without issuing a fresh proposal?—Yes, with proper safeguards.

11,685. Similar safeguards would be sufficient in that case?—I do feel very strongly about that. I do not know whether you wish to hear me further upon it. I think the fact that you cannot give any effect by way of amendment to objections is one reason which leads very often to objections not being sufficiently considered.

11,686. Personally I do not think that needs insisting upon at all. We have had it before us.—I thought your Lordship would say that.

11,687. Then you say that State enforcement should be maintained. That is really the point that we have been discussing. You then say that Joint In-

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

dustrial Councils have no sanction behind their determinations?—I set out a resolution passed on March 18, 1921, by the Association of Industrial Councils.

11,688. I do not quite understand the statement at the top of page 19. You say: "While the Irish Courts held that an individual worker was entitled to take proceedings before Justices to recover the minimum wage prescribed by the Agricultural Wages Board (*Buchanan v. Osborn* (1919) 2 I.R., p. 52) I am not clear as to the right of the workers to sue in the Civil Courts for wages due under the Trade Boards Acts?"—I think I am clear about that now. It is only by inference in the Act, but what I do think would be desirable, if a new Act were passed, would be to make it perfectly clear, beyond all question of quibble. I think it is clear by inference. In the 1909 Act it was quite clear, but Section 7, the Section in which it is contained, was repealed by the Act of 1918, and it is left entirely to inference in the Act of 1918.

11,689. As to inspectorate, you agree with the report of Mr. Wolfe's Committee?—Yes.

11,690. Then as to the Minister's position, I think we have discussed that incidentally. You think that there should be some confirming authority which should be an industrial authority?—Yes.

11,691. Either the Industrial Court or a Central Trade Boards Council?—I should prefer to call it a Trade Board Second Chamber. That is really the idea I have in my mind—a revising authority.

11,692. You might get into conflict with Mr. MacCallum Scott if you called it a Second Chamber?—We might call it a Senate. I set out there the reasons. I think those are the only two alternatives: the Industrial Court, or the Central Trade Board Council; and I give reasons for thinking that on the whole the Industrial Court would not do.

11,693. You instance the Central Wages Committee for Scotland under the Corn Production Act, 1917, but that is not quite an instance, because it related to one trade?—Yes, one trade only; that is quite so.

11,694. That Central Wages Committee was really a Trade Board with District Committees?—But the District Committees were the wage-fixing authority; the District Committees were not advisory bodies in Scotland; they were wage-fixing authorities subject to the Central Wages Committee for Scotland.

11,695. I think we fully understand.—I only gave it as an idea of what I had in my mind.

11,696. You say that the Central Council would have to be carefully constituted; that the Chairman should be a man of considerable standing and experience; and that the Council should be a confirming and not a rate-fixing authority. I do not know whether you take the view which I put forward just now, that the Central Council should always consist of the same members?—I should like it to consist of the same members always. I think it ought to have a permanent Chairman, but I think it would be desirable to include a voluntary element in it, and it seems to me that if it were to function it would have to meet so often that it would be absolutely necessary to introduce a rota system apart from the Chairman.

11,697. It is very important, is it not, that the Council should have a consistent policy, and not come to one decision one day and another decision the next?—If it had a permanent Chairman who always sat, do you not think that that would be a sufficient safeguard for the consistency of the policy?

11,698. If the members always paid proper attention to their Chairman?—I am sure they would do that. Was not that the fact very largely when they had one permanent Chairman of the Trade Boards under the Act of 1909?

11,699. I believe it was so in the old days?—May I say this: I rather had in my mind there an experience which I had myself when I sat as Chairman of the Munitions Tribunals during the war in three counties, and of course had a fluctuating body of assessors, workpeople and employers, who sat with me. I found no difficulty so long as I was always

sitting in maintaining a reasonably consistent policy in the decisions which were given.

11,700. However, that is quite a detail?—That is a detail.

11,701. You refer to the need for Appointed Members?—Since writing this I have had an opportunity of just reading through Professor Hobhouse's view about this, and I should like to say that I am in substantial agreement with him.

11,702. Then the suggestion that they should only vote on the minimum rate is one which we have really been dealing with?—Yes. May I add this, as one point which I have mentioned: if it were eventually decided that the jurisdiction of the Trade Boards should be continued, and should include the rates of workers of higher degree, but that the Appointed Members should not have a vote with regard to the rates to be fixed for workers of higher degree, might I suggest that it is desirable that that should have some proviso to it that they might do so if requested by both sides, because in some cases, assuming that they had jurisdiction to fix rates for higher grades of workers by agreement, the parties might have started shillings apart, and have come down to simply a question of a farthing, and it would be deplorable if a whole section of workers should be deprived of the protection of an enforceable rate simply because that difference of a farthing could not be bridged? I have known that happen—that the difference has been that of a farthing, which no power on earth could bridge.

11,703. Mr. Layton: You would be asked to arbitrate in those cases?—We should be asked to arbitrate; except that all the way through my evidence I have had a desire to keep the arbitration idea out of it. A Trade Board is a legislative body; it is not a tribunal; it is not a Court. That is why I think that the confirming authority should not be the Industrial Court. I think it would introduce the idea of arbitration much too prominently.

11,704. Chairman: They would still not be arbitrators: they would come in as additional members of the Board?—Yes, they would not be arbitrators; they would come in as additional members of the Board. I do think that anything that is done ought to preserve the essentially legislative character of the work of the Board, and should not mix it up with arbitration. In our Boards we have never regarded ourselves as arbitrators, but as members of the Board who can help, keeping the decisive character of our final vote well in the background.

11,705. I think we have dealt with local conditions, to some extent, in discussing District Committees.—Yes.

11,706. Then on page 25 you deal with the value of special powers of Trade Boards with regard to juveniles?—Yes.

11,707. That is to me a very interesting statement.—If I can render any assistance to the Committee upon this branch I should like to. It is a matter which has been a special subject of mine for very many years.

11,708. I know that that is so. You still think that in manufacturing trades apprenticeship is a good system and a system which should be encouraged?—I am quite certain that apprenticeship is not dead. There is a most distinct revival of interest in apprenticeship at the present time in many industries. In the past it has been allowed to fall into the background, but now people are awaking to a knowledge of the very serious situation which has arisen in some trades because it has been allowed to decay. There is not a sufficient supply of craftsmen coming on, and the only way in which a sufficient number of craftsmen can be obtained is by indentured apprenticeship in a real workshop. The movement which we started in Bristol is spreading to other places, and when the idea had been given to the Trade Boards upon which I have been sitting it has been taken up with the greatest keenness and a very high degree of efficiency.

11,709. Have your Boards settled the form of apprenticeship deed?—Yes. The Brush and Broom

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

Trade Board was the first Trade Board to promulgate an indentured apprenticeship scheme under Trade Board Order, and we scheduled a model deed under the Order.

11,710. Do they do what other Trade Boards do to encourage employers to take apprentices, by slightly reducing the rate for apprentices?—Considerably reducing it.

11,711. That is a good plan, is it?—I think so. The rate for apprentices must certainly be lower than the rate for unbound learners, to say nothing of juveniles. It certainly must be below the juveniles' rate, and if there is also an unbound learners' rate it must be somewhat below that, because a rate which may be unobjectionable as a plain learners' rate or a juvenile rate may be perfectly impossible for bound apprentices. I do not want to criticise another Board, but I think that is largely responsible for a good deal of the criticism which has been directed to some of the sewing trades Boards, because they neglected the fact that in the retail trades, drapery, millinery and the women's light clothing trade, there was no scale for apprenticeship, and the juvenile scales were too high for apprentices. They may have been perfectly right for juvenile scales, but they were too high for apprentices. What has happened is this: either employers have given up taking apprentices altogether, or they have reverted to charging a substantial premium to counteract what they regard as the excessive rates fixed by the Trade Board.

11,712. *Mrs. Lyttelton*: Of course, those are trades which require a great deal of learning?—A great deal of learning.

11,713. You cannot do it under three or four years?—They require three years at least in millinery. There are six Trade Boards at the present time which have promulgated schemes of indentured apprenticeship following the general lines laid down by the Brush and Broom Trade Board, which followed the Bristol schemes.

11,714. *Chairman*: In the case of learners you have no form of deed?—No, the general condition adopted by Trade Boards does not lay upon the employer any liability to teach; the only condition is that he shall afford the learner reasonable facilities for learning. It does not lay upon the employer any obligation to teach the trade, such as the apprenticeship schemes do, the consideration which he gets in these schemes for the obligation to teach being a lower rate.

11,715. *Mrs. Lyttelton*: How is the obligation to teach enforced?—Under the indenture.

11,716. I mean, by an inspector?—In the schedule is the indenture; and the apprentice and his parents have a double sanction: compliance with the terms of the indenture is a condition of the payment of the lower rate under the Trade Boards Act, and in addition to that they have a civil remedy on the contract which can be enforced under the Employers and Workmen Act of 1875 by proceedings before the magistrates.

Chairman: It is the parents' duty to see to the enforcement of the deed?

Mrs. Lyttelton: Yes, it is the parents who are the check more than anything else.

11,717. *Lord Weir*: And inspectors?—Yes. We are trying at Bristol something new which I may perhaps explain if your Lordship is interested in this. We have set up, outside the Trade Board trades, a number of standing sub-committees in connection with the Juvenile Employment Exchange; we have a permanent Central Apprenticeship Sub-committee, of which I am Chairman, and we have a number of small committees composed of employers and workers to supervise the apprenticeships, and in fact in some cases they become fourth parties to the indentures. They supervise the training and are prepared to devise tests to see that the children are properly taught. We hope shortly to set up two more sub-committees to deal with two Trade Board schemes.

11,718. What is the youngest age of apprentices such as you have been talking of?—14 or 15 years of age. The tendency now is to take 15 or 16 rather than 14 years of age. I met the Master Tailors at Bristol the other day and discussed this matter with them, and they said that they thought that the scheme was of great assistance to the trade, and that if the Trade Board would reduce the rates they would give it their hearty support, and would co-operate with the workers in forming a committee to father the scheme in the vicinity of Bristol. They have proposed a revised scale of rates which I have brought before the Trade Board, and the Trade Board has adopted the scale with a slight variation. The matter is also under discussion in the boot and shoe repairing trade.

11,719. Have you ever heard of three rates being fixed, one for juveniles, one for learners, and one for indentured apprentices?—Yes.

11,720. In this case are you a believer in having that intermediate learner's stage, which is something very indefinite?—I do not like it, but I think that in some cases it is necessary. Take, for instance, the case of bespoke tailoring, where a high degree of craftsmanship is necessary; three or five years' indentured apprenticeship with three years' improvership in the case of girls is the ordinary practice in the trade, but then you have the sub-divisional methods coming in and quasi-factory methods in bespoke shops. There is no scope for apprenticeship then.

11,721. *Mrs. Lyttelton*: It is too easy?—It is too easy; there is no question of apprenticeship. It would not do. You are bound to have a learner-ship scheme there alongside of apprenticeship.

11,722. In the case of anything that you can learn in a few weeks, you could not have apprenticeship?—It is a pity, but I think it is impossible.

11,723. *Chairman*: What is the difference between a learner and an ordinary juvenile?—I do not think there is much.

11,724. *Lord Weir*: That is my point?—No, I do not think there is much difference.

11,725. *Chairman*: All that the learner gets an opportunity of learning, the ordinary juvenile has the same opportunity of learning?—I think where you get the three rates in one Order the position is this: apprenticeship is plain enough; the unbound learner is really a juvenile picking up an operative's branch of the trade, while the plain juvenile scale is merely a young labourer's rate.

11,726. A rate for an errand boy?—An errand boy or a stores girl or a messenger.

11,727. *Lord Weir*: I wondered whether you would not get more apprentices and better apprentices by only having apprentices and other juveniles?—I think you would. I think it is only in exceptional cases that you can justify the three rates. We have gone further on the Retail Bespoke Tailoring Trade Board; in one section we have only apprentices and learners and we have said: "You have got to register these young people or else the adult rate applies. If you are going to have young people at all you must see that they really do learn." We have no juvenile scale at all in one section, if I remember rightly.

11,728. Would you compel an employer to move them from one operation to another, so that they can get trained in more than one operation?—You can only do that under an apprenticeship scheme—under an Indenture. I am anxious to encourage the use of Indentures wherever possible.

11,729. What condition have you in connection with learners?—The condition which is attached to the payment of the learnership rate is that the employer shall employ young persons under circumstances which afford them reasonable facilities for learning. That is a condition attached to the payment of the rate, but I do not think it really means much.

11,730. That is what I was trying to bring out?—I think in most cases it is simply a juvenile scale under another name.

11,731. *Mr. Layton*: But at a lower rate?—Except that it is at a slightly lower rate.

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

11,732. *Chairman*: Then you speak very highly of the effects of Trade Boards on the relations between employer and employed. I suppose that depends a good deal on the personnel of the Board?—Yes, I think it does. I think No. 10 is a difficult question to answer, I may say. I have made some inquiries among friends in industry connected with Trade Boards, and the general opinion which I have heard expressed is set forth in my evidence.

11,733. Speaking generally, the working of Trade Boards has improved relations between employers and workmen?—I think so, distinctly.

11,734. *Mr. Layton*: Have you had evidence to the contrary effect at all?—None, except that I was going to say—no, I will say none. I stopped saying what I was going to say because it might have caused friction.

11,735. *Chairman*: Practically none?—Practically none. In the case which I was about to mention I do not think it has made matters any worse.

11,736. Then as to scope, you agree that the Board should be consulted on the question of scope, but not that it should be empowered to give a decision upon that question?—No, I feel that very strongly.

(The Witness withdrew.)

(Adjourned to Wednesday next, the 8th instant, at 11 a.m.)

TWENTY-FOURTH DAY. Wednesday, February 8th, 1922.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE, G.C.M.G. (*Chairman*).

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTELTON, D.B.E.

MR. JAMES BELL, M.P.

MR. W. T. LAYTON, C.H., C.B.E.

SIR ARTHUR F. PEASE, Bart.

MR. E. L. POULTON, O.B.E., J.P.

MR. A. PUGH.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (*Secretary*).

Professor J. B. BAILLIE, C.B.E., Called and Examined.

The Witness handed in the following statement as his evidence-in-chief.

I.—*Minimum Wage should not be ambiguous and should be enforceable.*

In order that legislation may deal satisfactorily with the problem of the minimum wage, it is of the first importance to determine in what sense the term "minimum wage" is to be used, and to recognise that legislation can only be effective where decisions are able to be enforced.

(a) Much perplexity and misunderstanding in the application of the present Acts, especially that of 1918, have been created by the ambiguity of the term "minimum time-rate" (or general minimum time-rate). Apart from other meanings, it may mean in practice (1) the minimum subsistence rate; (2) the minimum economic rate, i.e., the lowest rate which the trade can afford and is prepared to pay at any given time having regard to the state of trade; (3) the standard rate paid to an average low-grade worker. (1) and (2) mean in effect a rate below which, except in rare cases, a wage would not fall; (3) means a rate above which, in many cases, a wage need not rise.

The effect of this ambiguity is that in certain cases a Board has established a rate which is a compromise between (1) and (2), and which may come to operate as a standard rate (3). In arriving at the rate each side of the Board is actuated by different aims and influenced by a complexity of motives. The two sides do not work together for the same object; they tend to work against each other for different objects. Consequently, when the rate is determined, it is interpreted in a different way by each side. The employers on the Board regard it as a minimum rate in the sense of (2); the workers look upon it as a minimum rate in the sense of (1) and point out that some employers apply it in the sense of (3).

11,737. You think that that should go to the central body which you have mentioned?—Yes. It is very difficult to get a body of people in some Trade Boards really to turn their minds on to the true interpretation of the language which they have used. They always want to read into it what they think they intended.

11,738. *Mrs. Lyttelton*: It does express it to them, of course?—Not always, I think. We have had our difficulties upon the Retail Bespoke Tailoring Trade Board, for instance, in trying to determine what the Board meant by the constructional part of a coat.

11,739. *Chairman*: You always rather tend to enlarge your own operations?—Yes, I think you do on some other bodies. I think a Trade Board is very useful just to express an opinion as to what they really meant, but I do not think the Trade Board itself is a good authority to interpret, in a binding form, its own determinations.

Chairman: Thank you. We are much obliged to you for coming and for your evidence.

Hence the rate is on the one hand difficult to establish owing to the opposition of the employers to establish a rate which in their view approximates to an economic rate; and on the other difficult to vary downwards at a time of bad trade owing to the opposition of the workers to lowering a rate which they consider to be nearly or solely a subsistence rate.

Again, the rate when established is satisfactory to neither side; for the employers regard the rate as too high, and the workers consider it too low, especially when they find, as they allege, that it is made in certain cases to operate as a standard rate.

(b) Perplexity has also arisen owing to the difficulty and uncertainty of enforcement.

There seems no doubt that the Boards have fixed rates substantially higher than the minimum subsistence rate. At a time of prospective or rising prosperity this may be no disadvantage, for in the circumstances the rate may be enforced. But at a time of trade depression it is practically inexpedient to enforce these higher rates in certain trades. The enforcement would at once lead to unemployment on a large scale. Moreover, workers have been found willing to accept rates lower than those fixed by a Board when the alternative placed before them has been that of either unemployment or lower rates than Trade Board rates; thereby showing that in their view the rates fixed by the Board were above the subsistence level. Hence the paradoxical result: a Board representative of a trade may fix rates which workers may say they do not want, which employers may say they cannot possibly afford to pay, and which the Executive cannot enforce lest unemployment be increased and workpeople become dependent on State subsidies. Such a result stultifies the procedure and operations of the Trade Board.

But even were it practically expedient to enforce high rates in the circumstances of trade depression, it has not been found possible for the Executive to

8 February, 1922.]

Professor J. B. BAILLIE, O.B.E.

[Continued.]

guarantee enforcement of the rates fixed by Trade Boards, whether the rates were high or low. The inspectorate has been admittedly inadequate for the purpose.* This imperils the efficiency of Trade Board action. It has been felt both by the work-people and by the employers who are prepared to accept the decisions of the Boards, that they cannot be certain that the Trade Board really controls rates of wages in the trade. This lowers the authority and prestige of the Boards. Fortunately most of the employers are loyal to the Boards and to their Associations represented on the Boards. But good will unless supplemented by effective enforcement is not enough to guarantee that the Trade Board rates are made operative.

II.—Limits of Trade Board action.

(a) It should be understood that a Trade Board cannot fix or guarantee any minimum wage; it can only determine a minimum rate of wages. No trade and no Trade Board can guarantee the continuous work necessary to secure a wage, i.e., a rate multiplied by a number of hours constituting a normal working week.

(b) It should also be understood that while some more or less vague conception of a "standard of life" may be implied in determining a minimum rate of wages, a Trade Board is only indirectly concerned with securing a standard of life. Many elements other than wages go to constitute a standard of living. Wages form only one very important element. The maintenance of a standard of life requires a secure wage. A Trade Board can guarantee only a rate of wages, not a regular wage.

(c) If Trade Boards were invested with complete and specific power to raise the standard of living for the worker, then, in justice, legal means must also be devised to protect employers, to promote the interests of their trade, and to secure the interests of the consumer.

Responsibilities such as these seem to me beyond the scope of effective governmental action in this country.

(d) A minimum wage is only indirectly concerned with "efficiency" on the part of the worker. Efficiency is mainly a matter for the employer to determine. The Trade Board decision merely ensures that if a worker is employed, the worker shall not be paid at less than a certain rate.

(e) Trade Boards are primarily intended to ensure a minimum rate of wages. Trade Boards are therefore only indirectly concerned with standard rates of wages, that is, rates that are actually operative, e.g., for the ordinary or average worker in a given class of work, or for a specific amount or kind of piece-work.

III.—The minimum subsistence wage.

(a) Trade Board legislation undoubtedly finds its ultimate justification on the ground that the worker in a trade should not be paid for a full week's work less than a minimum subsistence wage, i.e., a wage sufficient to provide the necessities of life required by the worker in a civilised country at a given period of time, irrespective of the kind of work done.

(b) Such a minimum wage, however defined, is only valuable as a theoretical principle. The translation of the principle into the form of a definite amount of wages presents the gravest difficulties.

The practical questions are: (1) on what basis is it to be determined? (2) how is the amount to be arrived at by a Trade Board?

(c) As regards the basis, the following points seem to me important:—

(1) The minimum subsistence wage primarily concerns the family.

It concerns an individual only when and in so far as he or she has to live entirely independent of a family unit, or is self-supporting.

Many industries, e.g., textile industries, have developed from the family as the working unit. The large scale development of textile factories, especially in secluded or rural districts, has been made possible on the old basis that the earnings of certain workers—juveniles and females in particular—supplemented those of the head of the household, and were regarded as supplementary. They were not supposed to be adequate to maintain the individual worker (juvenile and female) in complete independence.

The minimum subsistence wage mainly concerns adults, not juveniles.

The wage should be different in the case of a man from that of a woman.

(2) I do not think it is possible to establish a single national minimum subsistence wage for adults, men or women. The cost of living, as well as the means of livelihood, differs in different parts of the country; and at the present time is changing from month to month.

A single national minimum wage would be either too low in some districts or too high in others.

When fixed nationally it would tend to stabilise prices, and keep up the cost of living.

It would be impossible, except in a somewhat arbitrary manner, to determine precisely what a minimum subsistence wage for the whole nation should be.

(3) The conditions of subsistence vary from trade to trade. They also vary from district to district, not merely as between urban districts, but as between town and country. It is possible to gather sufficient and relevant data for a fairly accurate estimate of the minimum subsistence wage required in a given district. It does not seem possible to do so for the whole country.

(d) As regards the method of determining the amount, there seem to me only two courses which a Trade Board could follow. One is to make a careful investigation by members of the Board into family budgets of workers in the trade. It need hardly be said that such a method could not be expected to lead to a solution. It would take an indefinite time: the data would be disputed and would be disputable: the investigators would not be sufficiently trained for the purpose. The second method is to take the amount of allowance paid by Government to the unemployed under the Unemployment Insurance Act, and put a percentage increase on this amount; the percentage might vary from trade to trade and be determined from year to year. This may be a feasible method of solving the problem. But it would hardly be possible to get the two sides to agree on the appropriate percentage, for different but equally strong reasons.

(e) Even if the amount of the minimum subsistence wage could be definitely found and determined by a Board, it would only be fixed as a wage limit. It would not be looked upon as a sound economic wage, even by most employers. The Board would then proceed to determine the general economic minimum rate of wages above this subsistence minimum; and thus the Board would have two rates, both general to the trade and both enforceable, but one higher than the other and displacing the lower rate in effect. In short, the subsistence minimum

* NOTE.—One of the Boards with which I am concerned covers 438 employers; the number of visits of inspection to firms made during the year ending June, 1921, was 24, and some of these visits were re-visits to the same firms. Under another Board there are 258 employers; during the year ending August, 1921, 44 visits of inspection were made, 26 of these being re-visits. In the case of another Board there are 3,385 firms concerned; during the year ending November, 1921, there were 57 visits of inspection made, 21 of these being re-visits.

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

would for all practical purposes remain enforceable, but not operative except in extreme cases, or in unusually bad conditions of trade.

(f) It is impracticable therefore to start from a minimum subsistence rate of wages and build up other rates upon it as a bottom wage. It is best to look upon the subsistence minimum as a limit. The point at which the limit will be reached must be left to each Trade Board to determine. No exact sum can be fixed to correspond to this limit, without reference to the economic circumstances of the trade at a given time.

The minimum rates of wages with which a Trade Board deals should therefore be held to mean economic minimum rates. This seems in the best interests of both employers and workers.

IV.—Economic Minimum Rates.

(a) It was certainly the intention of the Amending Act of 1913 to give Trade Boards general powers to deal with the various kinds of rates in a trade. It is very desirable to retain these general powers, consistently with not interfering with the normal course of trade and the freedom of action of the employer. By doing so a Trade Board may prove a useful instrument for indirectly, though gradually, raising the standard of living of the worker, and for enabling workpeople to have an active share in regulating their industry. This kind of self-government in industry is in line with the natural development of free institutions in this country and with certain prominent tendencies in industrial life at the present time. All Trade Board action of this kind, however, is in its experimental stage; and if it is to be successful, it is necessary that it should not be carried out at the expense of the industrial prosperity of the country or at the expense of the employers, many of whom are at present struggling for existence.

(b) There can be no question that economic minimum rates must differ for each trade and can only be determined after discussion between the two sides of a Trade Board. Whether the rates should be national or district rates or both will depend on the trade. No clear principle can be laid down to govern all Boards in regard to this point.

One of the difficulties in working the Trade Board Acts is that they are applied to trades of such diverse character. Some trades produce solely for a home market, and in certain cases can fix a monopoly price, *e.g.*, the tobacco trade. The rates fixed by Boards covering such trades can be fairly high; and these high rates are quoted in argument at Trade Boards which deal with trades producing and competing under entirely different conditions.

If there is little or no foreign competition in a given trade, the Trade Board may be able to establish a high general economic minimum as long as the demand for the product is not seriously affected. If there is much foreign competition, any national economic minimum fixed will tend to be low. In the former case the effect of Trade Board action will be to raise the price to the consumer. In the latter case foreign competition is to advantage of the consumer. The general economic effects of Trade Board action in determining national minimum economic rates cannot yet be estimated. How important they are a few years of experience may show.

V.—The classes of economic rates.

(a) The economic minimum rates with which a Board is to be concerned should be clearly divided into two classes of rates: (1) the economic minimum rates (or "general minimum time rates") and overtime rates applicable to the *unskilled* and *semi-skilled* time-workers; and (2) all other rates.

The latter would naturally bear some relation to the former. The former should be the basal minimum economic rates for the trade.

It is on behalf of the workers who would come under (1) that the Trade Boards can in general do most service.

Obligatory and optional rates.

(b) The settlement and fixing of the first class of rates should be the only obligation statutorily imposed on a Board. It should be left entirely to the option of the Board to determine whether or not it will proceed to fix any of the rates coming under the second class.

Power of suspending optional rates.

(c) The first class of rates should remain effective and enforceable until varied in the usual way.

But power should be given to a Board with the consent of the Minister to suspend completely and forthwith the operation of any of the second class of rates for a period of time, without going through the procedure of varying these rates. This might prove of great value at a time of severe trade depression.

Methods of enforcement.

(d) The two classes of rates might differ in the manner of the enforcement of each class. The enforcement of the first class should be by penalty. It would probably be sufficient if an employer who had failed to pay rates of the second class, when fixed by a Board, were required by the Act to repay with interest the amount due to the worker, without any penalty in addition to the repayment of the sum due.

VI.—The settlement of optional rates.

(a) While the powers of the Boards concerning rates are at present partly obligatory and partly permissive, Boards have not drawn, probably for different reasons, any marked distinction in the exercise of their functions regarding rates. It would be an advantage in many respects if it were laid down either by Regulation or otherwise that the fixing of the second class of rates above referred to should be regarded as optional on a Board.

(b) The determination of the optional rates should be brought about by the method of conciliation or voluntary negotiation between the two sides, with such assistance as the appointed members might supply.

It has been too readily taken for granted, partly through want of experience of the effects of Trade Board action, that a Board, because it possesses the power to fix rates other than the general minimum time rate, should proceed to do so. Very many employers object to this being done. The success of an employer's undertakings depends, in most cases, on long contracts on definite terms. The power of a Trade Board to propose or vary at any time, *e.g.*, piece rates, is felt to be a disturbing influence in the employer's calculations so serious as to imperil security and continuity of trade. This is particularly the case at a time of trade depression such as we are now passing through, and is experienced with greater force in trades subject to strong foreign competition, such as the Linen and Jute textile trades.

On the other hand, the workers are certainly entitled to ask for the establishment of rates above the general minimum time rates; they are entitled, especially in times of good trade, to claim their share in the prosperity they help to create; and they are also justified in desiring to bring all classes of rates under the review of the Board.

There seems no reason why these different interests of the two sides of the Board should not be conserved if the settlement of piece-rates, etc., from time to time were left to voluntary arrangement under the auspices of the Board.

Joint Industrial Councils have satisfactorily arranged rates in this manner without any pressure from without. What can be done by Joint Industrial Councils can be done by a Trade Board if the proper spirit exists at the Board.

I am also of the opinion that settlement by conciliation and voluntary arrangement of these optional rates would, on the whole, be fairer both to workers and to employers. To workers, because they would be likely to receive better terms by this means than

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

any other, and the rates when introduced would not be fixed at the cost of dismissing or de-grading workers. To employers, because a Trade Board can be set up whenever the Minister is "of opinion that no adequate machinery exists for the effective regulation of wages throughout the trade"; and thus employers, good and bad, may be brought under a Trade Board on account of an existing lack of organisation of the workers for which, as employers, they are not responsible. And even when "the rates prevailing in the trade" justify the Minister's order, it seems reasonable on the part of employers, especially employers paying generally good wages, to maintain that if a Trade Board is set up to fix compulsorily a general minimum time rate, it ought not to exercise similar compulsion in establishing optional rates above the general minimum time rate. There certainly seems broad justice in the employers' contention that they should not be induced to come under a Board for one purpose and then be compelled against their will to use the powers of the Acts for another purpose.

If optional rates were arranged in the manner suggested they could be made to suit more easily the exigencies and peculiar conditions of a trade; they could be brought in quickly, or varied rapidly and without so much friction as at present; they could be established in certain districts and not in others, or they could be general for the whole trade, as circumstances made possible; and they could be enforced while they lasted on the whole trade or such parts of the trade as might be affected by them. The enforcement of these rates would be less difficult because of the voluntary manner in which they were arranged.

VII.—District Committees:

(a) In connection with the Boards with which I am concerned, there has been no operation of District Committees in determining rates. Both employers and workers have in general been against District Committees.

I think more use should be made of District Committees for determining rates, especially the higher rates. They would enable the Boards to keep more closely in touch with local interests and local trade conditions, and thus to deal more effectively with all aspects of the trade; they could deal more fairly with the smaller, the non-associated and rural employers; they could take account of different kinds of machinery and forms of management which affect both the production of the employer and the earnings of the worker; they would enable the workers in the more prosperous districts to reap advantage from the prosperity they help to create; and they would recognise, without neutralising, the important factor of competition between districts engaged in the same trade.

The failure to use District Committees is often a danger to the small or non-associated employers; and it is not the business of a Trade Board to destroy the small employer, since the Board exists for the trade, not the trade for the Board.

(b) The fixing of uniform rates for the whole trade regardless of district interests operates in two ways. They may be fixed either too high or too low. A rate may be too high for the small employer and the small districts, and may be made high by the larger and associated employers simply to crush out the smaller employer. It may again be fixed low enough to suit the small employer and low paid districts. But while in appearance this may be intended to benefit the small employer, in reality it benefits the large employer still more; for it gives him the advantage in trade competition and sacrifices his workpeople to the interests of the small employer. In both cases, therefore, the large employers reap the main advantage from the uniform rate fixed for the whole trade regardless of districts.

Where Boards are reluctant to use District Committees there should be a greater representation of separate districts on the Boards.

(c) The powers of the District Committees under the present Acts are at once too great and too small. When set up, no vital decision taken by a Board regarding rates can be enacted without first being sent down to a District Committee. This makes the operation of the Board with District Committees cumbersome, slow and expensive. District Committees, again, can take no decision regarding rates without sending them to the Board for consideration. It would be better if District Committees were given relatively complete power over the rates and other matters in their own particular districts.

The Board could then be allowed to act for the trade as a whole without constant reference of its decisions to the District Committees.

VIII.—The process of settling the rates at the Board.

(a) In actual practice, in my experience, Trade Boards settle minimum rates in different ways. A general minimum time rate is arranged in one way, a piece work basis time rate in another, a piece rate in another.

Taking first the general minimum time rate. The workers' side of the Board proposes a high rate, generally a higher rate than they can possibly expect to be established. The employers' side proposes a low rate, generally lower than they expect will be accepted. After discussion, and usually at the instance of the appointed members, a certain amount of information, more or less extensive and more or less reliable, is produced regarding rates actually paid in the trade, pre-war rates, rates paid in allied trades, rates in other trades, cost of living, and the effect of a high rate on the state of trade. Neither side may be much convinced by the arguments of the other side. The appointed members may then intervene and discuss with each side separately. They make up their minds in the light of all the evidence as to what they consider approximately a fair rate, and by argument and discussion endeavour to bring the two sides to agreement on this rate. The agreement may be made willingly; it may be made unwillingly by one side giving way to the pressure of the appointed members. If there is no agreement reached by this process, the difference between the two sides will, in general, at this stage have been reduced to a small amount. At this stage representatives of the two sides may come together to see if they cannot agree by themselves, apart from the appointed members. This attempt seldom succeeds. If disagreement remains, the matter then comes to the vote, the decision lying with the appointed members.

The success of this process and the fairness of the result will depend very largely on the amount of information placed by the two sides before the appointed members, either at the Board or by each side separately. So far I have not always found sufficient confidence and frankness between the two sides to induce each side to lay before the other all the information that could be wished. Perhaps increased experience of working together for the same ends may remove this serious defect. To some extent the failure to give information is due to one or both sides not possessing the information; to some extent it is due to the feeling that one side distrusts the statements of the other, or that statements made will not remove long-standing prejudices.

(b) It is sometimes objected to the procedure of settling the general minimum time rate in this way that it is not "scientific" and not sufficiently well informed to justify legislative enactment. This objection appears to me impractical and unreasonable; and it is generally made by a doctrinaire member of a Board who, in apparent zeal for a perfectly accurate decision, in reality seeks to postpone or prevent any decision at all. In point of fact there is only one way in practice of settling a time-worker's wages and that is by bargaining. There is no "scientific" procedure adopted in such cases in ordinary life. No employer would allow a prospective employee to examine his books before accepting the wage offered; and no employee would allow

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

prospective employer to examine minutely into his or her weekly budget of expenses before coming to terms. On a Trade Board one side acts as a collective employer bargaining with the other side as a collective worker.

(c) As regards the piece-work basis time-rate, this is in general determined by reference to the general minimum time-rate. The settling of it causes less difficulty as a rule. It is generally agreed to be a certain amount above the general minimum time-rate, anything from 1d. to 1s., according to the trade and the rates for piece-work generally prevailing.

(d) In the case of piece rates, these are, as a rule, more easily arranged still. The rates actually paid are used as a basis; adjustments may be made in the light of the general minimum time rate, and the scale can then be determined arithmetically. In one of my Boards comprehensive scales of piece rates were worked out by the two sides independently of the Board and without any assistance from the appointed members. Nothing could be better for the harmonious working of the Board than successful co-operation of this kind outside the Board.

IX.—Enforcement of rates by the Minister.

(a) All Trade Board rates having the sanction of the whole Board and the approval of the Minister should be enforced. The main difference between a voluntary body fixing rates and a body set up statutorily to fix rates, consists in the absence in the one case and the presence in the other of the power to enforce its decisions. To fix a Trade Board rate and not enforce it is tantamount to admitting that the rate is optional for the employer to pay and for the worker to claim.

If the decision of the Board regarding a rate is not to have full legislative effect, it would be better, both for the sake of the trade, for the sake of workers and employers, and for the legislative authority of the Board, that the rate should not be fixed at all.

(b) There can be no doubt that the Board would insist on the enforcement of the minimum economic rate (the "general minimum time rate").

It seems equally clear that employers would not be parties to fixing voluntarily optional rates by a Board unless they had the assurance that they would be enforced. For enforcement in the case of a Trade Board rate is the only method at their disposal for ensuring that the rate becomes universal in the trade. In a Joint Industrial Council the compact organisation of each side of the Council is the guarantee that the rate fixed will be practically universal in the trade. The assumption in the case of a Trade Board is that there is not complete and adequate organisation on each side. Enforcement is the instrument in the case of a Trade Board for securing what complete organisation can secure in the case of a Joint Industrial Council. It is, therefore, the necessary corollary of Trade Board legislation.

(c) The enforcement of rates is ultimately in the hands of the Minister, and should remain so. It is in every way better that this should be carried out by a single authority than that it should be left to the separate Boards to initiate and execute enforcement each in its own way. But much more could be done by each Board in securing enforcement than is done at present.

Full advantage is not taken of Clause 10 of the principal Act, which gives a Board power to receive and to consider complaints of failure to pay rates. The Boards' powers might well be extended to investigating into the payment of rates, e.g., by an approved chartered accountant. The fact that the Board could exercise such powers, and the publicity which such procedure would entail, would indirectly act as a check on non-payment; and at the same time the Boards would give great assistance to the Minister in carrying out this very important function of enforcement.

A Trade Board assumes that workers are capable of making use of the resources of the Trade Boards Acts. And it is obviously in their interest to notify any failure to pay rates.

X.—The Minister's confirmation of rates. The shortening of the period.

The Minister must retain the power to sanction or hold up proposed rates, since ultimately he is responsible to Parliament for enforcing the rates fixed.

(a) Where a proposed rate has been arrived at by agreement or substantial unanimity on the part of a Board, the Minister should be prepared to give his consent at once; and all objections to the proposed rate should be considered and the rate finally disposed of by the Board within a month.

To expedite proceedings and to avoid expense in convening the Board for the purpose of fixing the proposed rate, it should be in the power of a Board, in such cases, if it thought fit, to hand over the consideration of objections and the fixing of the rate to a Committee.

(b) Where a proposed rate has been arrived at by the decisive vote of the appointed members or with the reluctant assent of one side of a Board, it should be in the power of the Board to recommend to the Minister that the period for receiving objections should be one month, and that the interval of time between the publication of the proposal and the fixation (or variation, as the case may be) of the rate should be extended to a period not exceeding two months.

(c) In no case should there elapse a longer period than two months between the proposal and the final decision of the Board regarding a rate. The period should, in the interests of all concerned, be as short as possible. The period at present allowed has proved too long, and a most serious objection to the present Acts. It would be a great advantage if a rate were in operation two months after the proposal.

(d) Where an agreed alteration has been made by a Board in a notice of proposal, this should be accepted by the Minister without requiring a new notice of proposal, even when the alteration is substantial. The delay incurred by a new proposal being required where an alteration is substantial, regardless of whether it is an agreed alteration or not, is felt to be a hindrance and not an assistance to the easy working of a Board. It may be taken for granted that where both sides of a Board agree to the alteration, such alteration is in the best interests of trade, assuming that in other respects it is technically correct.

(e) While it is desirable to have the terms of the Board's decisions as legally accurate as possible, it seems unnecessary to cause delay in confirming them because of meticulous legal technicalities, which are not appreciated by laymen. A certain amount of risk might be taken, and difficulties might be met if and as they occurred in experience. More harm may be done to the trade as a whole by delay in confirming than would occur if a loophole of escape were discovered by one or two employers.

XI.—Posting of Notices of Rates.

The present method adopted for notifying rates, proposed or fixed, to the workers in a trade seems to me unsatisfactory and ineffective for its purpose. The notice is posted, let us say, at a part of the works where all the workers are likely to see it. This will naturally be where all the workers pass on their way to and from their work. But this gives no reasonable chance to the workers to examine this important notice, which is posted up especially in their interest.

(1) Workers may not have the time to read it; they cannot be expected to come to work earlier than is required, nor to stay in the works longer than is necessary. (2) There may be hundreds of workers in the works; if they try to inspect the notice entering or leaving the works the way becomes blocked.

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

(3) The notice contains sometimes hundreds or even thousands of rates, which it is impossible to read through in a short time. (4) The notice sometimes contains clauses which only a well-trained intellect can clearly grasp, even after careful perusal. (5) The notices are frequently changed.

The employer is required under penalty to post the notices in a conspicuous and convenient place. It seems unsatisfactory to penalise an employer for not doing what, when done, is of so little service to those whom it may concern.

I would suggest (1) that the notice, if a small one, or the relevant parts of a notice if the notice be a large one, should be posted up inside each work-room; and (2) that off-prints of all notices containing the fixed rates should be on sale to the workers at the Labour Exchanges for a small charge to cover cost of paper.

XII.—Appointed Members.

(a) The usefulness of appointed members has in my experience been generally recognised by the Boards, as a means of resolving a deadlock; as impartial critics and judges of the arguments between the two sides, thus compelling each side to take a detached view of its own interests; as agents for interpreting one side to the other; as conciliators mediating between the two sides; and in certain cases as quasi-arbitrators between the sides.

Objection has sometimes been taken to them mainly, indeed solely, on the ground that they do not know the trade intimately or sufficiently. This knowledge is a matter of degree, and the defect in knowledge can be removed to the extent that the Appointed Members desire and the employers and workers make possible. As a rule there is not much difficulty in acquiring as much knowledge of the trade as is adequate to understand the discussion and the main points at issue. Appointed members, in my experience, regard it as a duty to become directly acquainted with technical matters which are under discussion. It is the duty and in the power of the two sides to give as much information as possible regarding the trade to the Appointed Members. The Board does not deal with the technicalities of the trade except as these concern wages and working conditions. In many cases the Appointed Members have proved more desirous of obtaining knowledge of the details of the trade than employers or workers have been willing or sometimes able to supply.

The more detached the Appointed Members are the better for their own position, especially in the case where the two sides of the Board are relatively or greatly antagonistic to one another. In such cases I should imagine that if an Appointed Member were an employer from within the trade he would find his position untenable; and an employer from outside the trade would not be generally acceptable on the ground that he was an employer in another trade, and most trades are closely interlocked.

(b) In my experience I have not found great importance in having three Appointed Members for all Boards. In some Boards one might prove sufficient to attend a meeting, the vice-chairman being in reserve. In others, two would be adequate if the chairman had a casting as well as a participating vote. While consultation and advice are at times useful, there are also times when considerable difficulty may arise in securing agreement between two Appointed Members where only two are present; and risk of a deadlock is then incurred.

(c) It seems obviously essential that the Appointed Members should have powers of voting on all questions, otherwise their usefulness on the Board would be very greatly curtailed.

(d) I think the Minister should rightly keep in his own hands the appointment of the Appointed Members. If the Boards were formed by spontaneous agreement or consent on the part of both sides, they might, with the consent of the Minister, be allowed to choose their own chairman and vice-chairman

from among themselves or otherwise. But since in general the Minister decides to form a Board on his own responsibility, and it is the main business of the appointed Members to see that the Boards function properly according to the Acts, for the administration of which the Minister is responsible to Parliament, the Appointed Members should be selected by himself independently of the two sides of the Board. This gives the Appointed Members the necessary support of the Minister, the independence which they require, and the detachment from the interests of either side which both sides would in general desire.

(e) It would be useful both to a Board and to the Minister if the chairman were to communicate with the Minister at the time of renomination of members to a Board. For example, the Minister has it in his power to remove a member on the ground that he is "incapable." But there is no procedure at present used by the Minister to determine whether any member is "incapable" or to indicate what the term means as applied to a member.

XIII.—Juveniles.

The Boards with which I have been connected have done little as yet on behalf of juveniles beyond fixing rates. But apprenticeship schemes have been under consideration; and more may be done in the interest of juveniles as the work of the Boards develops and trade becomes more prosperous. It is one of the few subjects on which both sides of a Board, otherwise in opposition to one another, are generally in agreement.

Whether the rates of juveniles are fixed on an age basis or on an experience basis, depends partly on the custom of the trade, partly on whether the rates are time rates or piece rates, and partly on whether the Board decides to fix rates on an age basis or by reference to the work done. It is in the power of a Board to adopt whichever basis it chooses.

Certain of the Boards in my experience have agreed to fix rates in terms of age, in spite of the custom of the trade having long been to fix rates by reference to the work done. It is possible that they may see their way to revert to the hitherto prevalent custom of the trade. Probably if work or experience is taken as the basis of the rate, there would be less chance of replacing adults (or older boys and girls) by juveniles (or younger boys and girls) when the rates for adults (or the older boys and girls) are considered by certain employers to be too high. This would be an advantage; for the interests of the adult should come before those of the juvenile, and it is most unfortunate if the effect of a rate fixed by the Board is the displacement or the dismissal of the adult worker.

When rates are fixed in terms of age and the work is semi-skilled or skilled, it is always in the power of a Board to fix a lower rate for a learner. Hence when a worker starts at, say, 17 years, it is not necessary to pay the rate appropriate to that age until after a period of time which can be determined by the Board.

XIV.—The Personal Relations between the two sides of the Trade Board.

(a) Whether a Board is established against the strong disinclination of one side, or whether the employers and workers in a trade have long been in open or secret hostility to one another, the effect of the institution of a Board has been, on the whole, in my experience, beneficial to the two sides. I have known the two sides of a Board begin operations in sheer conflict and after a time enter into satisfactory co-operation. Undoubtedly distrust and suspicion generated by long standing antagonism of interests, for which one side is sometimes more responsible than the other, form the main difficulty in the way of industrial co-operation. Open discussion at a Board in the presence of disinterested and independent persons appointed by the Minister, generally enables each side to appreciate the merits and to tolerate the defects of the other, and to cultivate a

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

relatively impartial attitude on matters of vital concern to each side. The Appointed Members are also able, directly or indirectly, to tone down exaggerations, restrain incipient bitterness and interpret each side to the other in a manner which facilitates the cultivation of good feeling. All this forms part of the development of the sense of industrial partnership, which is one of the main objects of the existence of Trade Boards. Even where the result is only a very partial success as yet, it is at least a beginning of a better understanding, and more than could be accomplished if the two sides were left to independent action under the influence of long standing prejudices and unforgotten grievances.

With some Boards the success attained in this direction is greater than in others. It would not be too much to say that the entire success of Trade Boards depends on the personnel of the Board. Some people are capable of team work; others, both employers and workers, are incapable. Some see their advantage in removing hostility; others will cultivate hostility at the expense of their advantage. These matters are quite incalculable. Too much stress, therefore, cannot be laid on the importance of carefully choosing, as representatives of each side, persons who will be able and willing to work for the success of a Board and not for its failure.

There is no doubt that the effect of a Trade Board is to give the workers a degree of orderly control and direction in the affairs of their trade which they would not otherwise possess, and which, I think, they, on the whole appreciate. Only time will show whether they can take the full measure of their responsibilities and opportunities.

(b) There is a danger that the effect of Trade Board action may be to destroy or lessen the intimate and often friendly personal relationship which has hitherto existed between an individual employer and his workpeople. This relationship is very valuable not only for successful management but for the production of good work. It is a great asset for a good business, and in certain cases is a valued and important heritage from the past. It would be a serious misfortune if Trade Boards disturbed or imperilled such relationships either by making the employer feel that the care of his own workpeople is taken out of his hands, or by making the workpeople feel that they can no longer depend on their employer's personal interest in them, and that an impersonal instrument like a Trade Board has taken the place of personal loyalty to their employer. Certain employers undoubtedly look with apprehension upon Trade Boards on this ground, and perhaps with some justification. It is not necessary to do more than refer to the matter. The Boards have not yet operated long enough to enable us to say how far this fear is well-founded. But apprehension of this kind might be removed, and it would otherwise be to the general advantage, if there were as complete a representation as possible on the Trade Boards of workers from different districts actually engaged in the trade.

XV.—Suggested extension of Powers of Trade Boards.

I would suggest that the powers of Trade Boards should include those of investigating into and arbitrating in industrial disputes. All trade disputes, as well as all difficulties and differences between employers and employed, should be settled through or under the auspices of the Trade Board. A Trade Board should be given powers to institute an enquiry, by means of a committee appointed for the purpose, whenever a dispute or the prospect of a dispute emerges between an employer and his workpeople, or between the employers of a district and the workers of that district, in the trade coming under the Board. Such a committee should have power to call for evidence and go fully into all details, and report the result to the Board. The Board should be given powers (a) to appoint from its

own members, or from outside the Board, a conciliator or arbitrator to deal with the dispute; or (b) to refer the matter to the Minister of Labour for settlement, as may be found most suitable and agreeable to the parties concerned.

It might be found desirable to establish as a permanent part of the machinery of Trade Boards, some person or persons (a) to undertake systematic enquiries when disputes of the kind above mentioned occur in the case of all trades coming under Trade Boards, and (b) to conciliate or arbitrate in such cases. It would, however, be also an advantage if each Trade Board were on occasion to act as the arbitration and conciliation tribunal for the trade with which it deals. For it is always a great advantage when a trade dispute is considered and settled at once by those directly concerned in the trade. Such a function as that indicated would be a valuable extension of the powers of a Trade Board and would, I think, have the best results on the operations of the Board.

It seems to me highly probable that, when trade again becomes normally prosperous, there will be much need for some machinery of the above kind to allay or prevent disputes in trades coming under Trade Boards.

XVI.—Replacement of the present Acts by a single Act.

In conclusion I would strongly urge that the present Acts of 1909 and 1918 should be replaced by a single Act covering all the operations and powers of Trade Boards. It should contain whatever is of importance in the present two Acts as well as such modifications of the present Acts and such further additions to these Acts as experience, in the way already indicated, has shown to be desirable in the interests of the success of Trade Boards in the immediate future.

The existence of the Amending Act of 1918 alongside the Act of 1909 has been an unnecessary obstacle to the smooth working of the Boards. Legislation by reference makes interpretation cumbersome; for the layman it is apt to be bewildering as well as inconvenient. More especially is this the case where both in volume and significance the Amending Act of 1918 is the more important of the two. The Trade Boards are in effect the accepted agents of the legislature; and it is essential that those constituting the Boards should be able to see clearly for themselves what the law is which they are asked to administer. The representatives on the Boards are laymen who have neither the time nor always the patience to unravel a tangled skein of clauses and weave together the retained, the new, and the amended sections which are at present scattered over two separate Acts. They should be enabled to grasp as easily as possible the whole conspectus of the functions and objects of the Trade Boards.

11,740. *Chairman:* You are the Chairman of the Jute Board, I think, and also of the Flax and Hemp Board?—Yes, I am Chairman of those Boards, and also of the Aerated Waters Board in Scotland, and of the Linen and Cotton Handkerchief and Piece Goods Trade Board.

11,741. You have put in a statement, and you deal first with the point that "minimum wage" should not be an ambiguous term, and you say, I believe with truth, that a good deal of uncertainty has arisen in the working of the Acts owing to the fact that the term "minimum wage" or "minimum time rate" is not defined. You say it may bear any one of three meanings, first the minimum subsistence rate. That means the lowest sum upon which a man can keep himself at the time, is it?—That is one meaning, yes. There are other meanings besides these three which I mention, as you will notice. It is a very ambiguous term, the term "minimum rate." I mentioned these three specifically because they came into prominence in connection with the Boards with which I am dealing. That was my main reason for putting these three in here.

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

11,742. The second one is what you call the minimum economic rate. That, I gather, is the lowest rate which the trade can bear?

11,743. *Mr. Bell*: Should not that word be "highest" instead of "lowest"?—Well, no, I mean just exactly what I say there; I mean the lowest rate which the employers say on a given occasion at a Board they can afford to pay.

11,744. *Mr. Layton*: The highest rate for the lowest grade of worker?—Yes.

11,745. *Mr. Bell*: They contend that it is the highest rate they can afford to pay?—To the lowest grade of worker. Of course, as a matter of fact they do pay in all cases rates higher than what they would regard as the minimum economic rate. But they say, taking the trade as a whole and looking at the lowest grade of worker, "We cannot afford to pay more than this." I quite see your point; you might say that from one point of view it might be looked upon as the highest rate for the lowest grade of worker; but that is the meaning I put upon it here.

11,746. *Chairman*: Your third meaning is the standard rate paid to the average low-grade worker?—Yes, that is how I have found it work out; the standard to the average low-grade worker. I admit that in all these meanings there is a certain amount of room for ambiguity and difficulty, but I try to make them as clear as I can, and as they appeared to us on the various Boards with which I have to deal.

11,747. Some of the rates are a combination of (1) and (2)?—Yes, as I go on to point out.

11,748. It may be a subsistence rate, but having regard to what the trade can bear?—That is so.

11,749. I do not suppose you have thought out a definition which might be made statutory of "minimum rate"?—In which sense?

11,750. Well, general minimum rates which Trade Boards have power to fix; general minimum time rates?—Well, one has an idea in one's mind, but one hesitates to put it into words, partly because it might lead to further difficulties, and one would be almost certainly introducing a term which would require further explanation; and partly because one is not perfectly certain that the definition one would give at a Board would satisfy all the members of a Board. But if your point is to ask me what, independently of any Board, the minimum rate might be taken to mean, that is another question. I am not perfectly certain whether you mean that.

11,751. Well, I have been trying myself, and that is why I ask you the question, to find terms in which the expression "general minimum time rate" might be defined for the purpose of these Acts; that is, some expression which would give a guidance to the Trade Boards as to what they are to do when they fix a general minimum time rate.—Well, I do not think the word "general" would require definition, would it? That is defined in the Act. "General" means there as applying to any special class of workers, any kind of work that is mentioned specifically in the Act of 1918. You will find it under Clause 3 in the last paragraph of sub-section 1. That is what is meant by "general." With regard to "minimum"—well, I think it just means the lowest, of course, but lowest in the sense that it is the rate which the employers are prepared to pay to the average competent worker in that class of work to which the rate applies. Does that make matters any clearer? The average worker in that class of work to which the rate applies; employers are prepared to say that a worker—take, for example, the jute spinners—a worker working a certain number of bobbins of a certain size, and doing that to the satisfaction of the employer, is entitled to such and such a rate. The rate is determined by reference to the average worker and what the employer considers would be for him a rate which would enable him to secure a certain amount of profit out of the product. It is a minimum with reference to the average worker doing that class of work in his trade.

11,752. If I had a criticism to make it would be with reference to your expression "which the employer is prepared to pay." Of course, what the Board has to do is to fix what the employer must pay.—Yes; but in my experience it is impossible to say that the employer must pay such and such a rate if, as a matter of fact, in the circumstances of his trade he finds he cannot pay it. It seems to me there are two sides to a bargain, and the employer's side is one side as well as that of the employee.

11,753. In other words, the Board must have regard both to the cost of subsistence and to what the trade can bear?—Yes, and the question of emphasis on one or other of these will depend upon circumstances. If the trade is in such and such a position and the employer says: "I cannot afford to carry on if I am compelled to pay these rates," then you will have to modify what you considered the minimum rate accordingly. If, however, trade is prosperous, he can afford to pay more, and you lay emphasis on the side of the employee. It is all a question of the circumstances of the trade at a given time.

11,754. *Mr. Pugh*: But you could hardly include in a definition, could you, what the employer is prepared to pay, having regard to the fact that you have now got Trade Boards to deal with the situation which arose from a condition of things where the employer had a right to say what he would pay and what he would not?—Yes, but then you have a Board in which both sides are represented, have you not, and you say to that Board: "You must fix such and such a rate." You do not say it to one side; you say it to the whole Board, and therefore what the employer says he can pay has to be brought into account as to what the Board is to do.

11,755. Not as a matter of definition; as a matter of bargaining?—I do not see how you can leave that out if bargaining is part of the process of determining a rate. Therefore, in determining the minimum rate you must have some regard to that fact.

11,756. Where there was strong organisation on the workmen's side, they could press the employer to pay the maximum he was able to pay, whereas in unorganised trades you could not exercise that pressure, and therefore would your definition be equitable where there was not sufficient organisation?—But it seems to me that you secure collective organisation bargaining through the Board, and it is there that the question of "must" and what the employer "can" pay comes into operation, is it not? In the case of a Trade Board you have a certain amount of collective bargaining on both sides: pressure is brought to bear by the workers as a collective whole on the employers as a collective whole, and that performs the function, to a certain extent, of a strongly organised trade union outside a Trade Board. Is not that so?

11,757. Yes, but even so, would it not lead to grave misunderstanding if you were to include in the definition those words "what the employer is prepared to pay"?—I am afraid I cannot see in ordinary commonsense and justice that you can leave out of account the conception of what the employer is prepared to pay. Whether you use the word "can" or "is prepared" seems to me a matter of words, but you must use one or other. You cannot say to an employer, "Independently of what you consider the circumstances of your trade to be"—I mean, you cannot say to all employers; it is not a particular employer, of course—you cannot say to all employers in a given trade: "Independently of what you consider the circumstances to be, you must pay this."

11,758. *Mrs. Lyttelton*: Would you not be prepared to say, "That was necessary as regards a subsistence rate"?—Well, I have tried to indicate that, while the subsistence rate is important, the precise meaning of a subsistence rate in terms of money is extremely difficult to define. It seems to me a theoretical limit; it is not a practical proposition in my view. It is a theoretical limit, no doubt, which both sides may have in their minds, both employers and employees; but it does not seem

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

to me to be possible to take such a theoretical conception in the abstract and say, "Now, the money equivalent of this at a given time is so-and-so." *Mrs. Lyttelton*: No, it could not be universal, but surely it should be local.

11,759. *Mr. Bell*: May I ask if in your experience of Trade Boards and meeting employers there, it has been usual for employers on Trade Boards to admit that they could pay a higher rate?—Oh, yes, in certain instances; but they have to take into account the possibilities of trading at such and such a rate, the prospects of trade, and so on. They have to take that into account, and they say: "Well, we may be able to pay now a higher rate; we do not know what the trade is going to be, but we can safely risk such and such a rate."

11,760. *Chairman*: As a minimum?—As a minimum. As you are perfectly well aware, there is an enormous amount of risk, particularly in certain trades. I am thinking just now of the jute trade and the flax trade. It is a very risky trade and largely speculative, and the question of what they can afford to pay is largely a question of calculating on the future, and they might say: "Well, as circumstances are at present, we could afford to pay such and such a rate, but we do not think it would be wise for the Board to fix that rate."

11,761. *Mr. Bell*: But do you not think it was the intention of the Act, when passed, to say to employers under certain circumstances: "You must pay at least a living wage"?—I think I see a little ambiguity here, and just before I answer that question I should like to say this. The word "must" is being used in two senses in the discussion; the one is the "must" as applied to the whole body of employers; and the other is the "must" as applied to a particular employer. Now in a certain sense you cannot say to the whole body of employers: "You must do so," because they themselves are parties to the consideration of the question of what the rate is to be; is not that so? On the Board a certain section of the Board, about one-half of the Board, consists of employers. You cannot say, "In the name of this Board you employers must fix so-and-so," because they themselves are a party to the arrangement; but you can say, having fixed such and such a rate, to a particular employer: "You must pay so-and-so; the Board has fixed it." Do you see my distinction?

11,762. Yes.—Well, bearing that in mind (and it is important from my point of view to bear it in mind), your precise question is—

11,763. I am bearing this in mind, that when the Trade Boards Acts came into operation at the commencement they came into operation because wages in certain industries were admitted, though perhaps not by the employers in those industries, to be too low; in fact, were described as sweating wages?—In certain cases.

11,764. The Trade Boards Acts were brought into operation, I think you will agree, in order to improve the wages, so that the employers in those industries were told by the very passing of the Acts that they must improve their rates of wages?—That is so, in the 1909 Act.

11,765. Whatever their opinion was the very passing of the Acts practically gave them to understand that wages in their industries must be improved?—Quite; that is the 1909 Act you are referring to; sweating industries, yes; and that was generally agreed to by the employers as a whole, was it not?

Mr. Bell: I would not say as a whole.

11,766. *Chairman*: We probably shall not get further on the question of definition. You point out next the difficulty caused by the uncertainty in the enforcement of rates, and you say that it might happen in a time of trade depression that the Trade Board rate, the rate fixed by the Board, was one which the employers were not willing to pay, and which the workers themselves did not desire to insist upon?—Well, that they are prepared to take less; that is what I have suggested.

11,767. That, of course, causes discontent with the whole Trade Board system?—Yes.

11,768. And there is also the point that if the rate is not enforced the reputation of the whole system suffers?—I agree.

11,769. You say that the Board cannot guarantee the minimum wage; it can only fix the wage?—A rate of wages.

Chairman: Yes, a rate of wages.

11,770. *Mr. Layton*: Might I ask a question on the top paragraph of page 2? You say that workers have been found willing to accept rates lower than those fixed by the Trade Boards?—Yes.

11,771. Thereby showing that the Trade Board had fixed something above the subsistence level; does that follow?—That the rates fixed by the Board were above the subsistence level; well, I should think in their opinion it did show that.

11,772. Is it not possible that in an acute crisis workpeople may be willing to accept a wage rate—let me put it in this way—which might keep them in food for the time being, but would obviously not carry what we should call in an industry overhead charges, which would not pay rent and maintain their standard, and therefore that that would be below anything that you could define as a subsistence level?—Well, that introduces an extremely difficult problem. I do not know how you can possibly determine first of all the theoretical individual you have in mind who is to subsist, and requires to subsist at such-and-such a wage; in the second place it seems to me that it is very difficult to determine how much a human being is prepared to do without in order to carry on at all.

11,773. Yes, but might I interrupt a moment; you use the phrase here "subsistence level"?—The word "subsistence" varies in meaning according to circumstances. Surely it is the economic equivalent of mere living. Now a person can live at all sorts of levels; he can live just short of dying.

11,774. But it does not seem to me to carry us very much further if you say that any wage which a person under any conceivable circumstances might be prepared to accept must be above the subsistence level, nor to follow that the wage is above the subsistence level because he accepts it. I understand you to say that the fact that he accepts it proves it to be above the subsistence level?—If you take the word "subsistence" in some definite theoretical sense, I quite agree with you, but I should find it difficult to do that in face of actual facts. What precisely a person can live on is very difficult to determine or define. What I meant was wages being what they were as fixed by the Board, the fact that certain employees were prepared under certain circumstances to take less proved that they could exist so far as they were concerned for a certain time on less. That is all I mean.

11,775. That seems to me to knock the content out of the term "subsistence level"?—As I say, it is extremely difficult to tell what "subsistence" means, and how you are to arrive at it theoretically. It is a practical question all along, and it seems to me that the operation of the Trade Boards Acts must proceed on that assumption. It is for the employees to determine, along with the employers, what they are going to regard as subsistence for them. From one point of view, almost any rate that you would fix by the Trade Boards would be regarded in certain quarters as not a subsistence level, but for the workers concerned it is looked upon as a subsistence level, and all I mean by this statement here is that they were prepared to take less—it may have been only a shilling or two—and that from my point of view indicates that they considered the rate fixed by the Trade Board as one which was, in the circumstances, slightly higher than they were prepared to accept.

11,776. *Mr. Pugh*: Does that mean all the workers' side of the Board, or a small section?—Oh, I distinguish clearly between what the Board has fixed and what a certain section in a particular part of the country were prepared to accept and indicated that they were prepared to accept.

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

11,777. You are not arguing, are you, that because a small section of workers coming within the purview of a Board in a particular part of the country were prepared to accept, that in itself is sufficient reason for the Board fixing a rate?—No, no; that is not my point.

11,778. *Chairman*: I think in this discussion we have travelled more or less over the first few pages of your statement, and the first point on which I want to question you is on the economic minimum rates. I do not know whether anybody has anything to ask on pages 3 and 4. On page 6 you distinguish between the two classes of minimum rates: first the economic minimum rates and overtime rates applicable to the unskilled and semi-skilled time workers, and secondly all other rates. Those latter I think you refer to afterwards as optional rates?—That is so.

11,779. That is because you think that the fixing of the first kind of rate, the general minimum time rate, should be compulsory on a Board?—That is so.

11,780. And the fixing of the other rates should be optional?—That is my view.

11,781. I think you go further, and suggest that the second kind of rate, the optional rate, should be fixed by agreement on the Board?—As complete agreement as the Trade Board procedure will admit.

11,782. That means, I suppose, by agreement on both sides, without the determining voice of the appointed members?—Yes, but not necessarily without their assistance. They can, of course, discuss the position between the two sides; they might use arguments inducing one side to enter into free and voluntary conference with the other; but my idea is to suggest that the two sides together should arrange the rates, as in the case of one of my Boards has been done, and, in fact, in the case of more than one of my Boards, without any trouble at all.

11,783. That is, you would make the Board a kind of Whitley Council as regards all the optional rates?—As regards the optional rates, as nearly approximating as possible to a Whitley Council. I think that would get rid of a good many difficulties.

11,784. Why do you think that is desirable?—In the first place, if you will turn to the Act of 1918 you will find that the term "general minimum time rate" is to be fixed for time workers in any particular trade; regardless of whether the worker engaged on time work is skilled or unskilled; I think that is so, and in fact that is the way we have proceeded. Now, it seems to me important, in view of what the Trade Boards Act of 1909 laid down, and in view also of what I have found to be suggested in the Parliamentary Debate on the 1918 Act, namely, that the promoters bad in view the low-paid workers—that from those two considerations, and from many others, the kind of person to keep in view in the operation of the Trade Boards Acts is the unskilled or semi-skilled worker. If we can secure for that class of worker what is approximately—using the word in its undefined sense—a subsistence wage or an economic minimum wage, I think the Trade Boards have satisfied what is their primary purpose and intention. I say primary purpose and intention, not all that they might do, but all that they can be compelled to do, because we must have regard to the low rates paid to the skilled and the semi-skilled, and these are the people who most need protection. In a certain sense, I agree, there are difficulties, and I agree that in certain circumstances I should have to qualify my statement; but in general it is true to say that the piece-workers can pretty well take care of themselves, more particularly in good times. The piece-workers are in most trades what we might call the aristocracy of labour.

11,785. You would not apply that to the home-worker in certain trades?—Oh, no. I say I should make an exception in certain cases. It seems to me the person to think of primarily in a Trade Board is the unskilled or semi-skilled worker; get his wage as the bottom wage in the trade, and you have not only secured his interest, but you have also guaranteed indirectly that the rates of skilled

workers shall not fall below the rates of the unskilled—indirectly; and it is done in the Act here by saying that the piece rate, for example, shall work out at not less than the general minimum time rate. It does seem to me important to confine the fixing of the general minimum time rate to the unskilled and semi-skilled worker as the primary obligation of the Board. Once that is done, you have, strictly speaking, determined that any rates fixed later on by agreement or otherwise in the Board shall bear a certain relation to the rate fixed by the Board as the unskilled rate; so that you do not do any harm to the skilled worker by this process, only you say as regards the special rates, skilled rates and so on, owing to the fact that they vary, owing to the fact that you have to take the individuality into account in a way in which you do not in the case of an unskilled worker—because one unskilled man is pretty much as good as another—for those and other reasons you have to deal with them on their merits; and where you are taking these rates and these people on their merits it seems to me that it is a case for careful, deliberate, and prolonged consideration on the part of the two sides who have technical knowledge of the trade, which knowledge they ought to bring to bear, if they are going to deal with the matter fairly, on the subject of the settling of these rates. That is what I mean by distinguishing between the primary obligatory purpose of the Act and the secondary or optional purpose.

11,786. I gather that in other case, when once the rate is fixed, in one case perhaps by a majority and in the other by agreement, you would make the rate enforceable?—Most certainly. If the Board as a Board agrees to fix, say, piece rates, or any other rates—skilled workers on time—then the Board having taken certain action and agreed to do so, you must enforce the rates, most undoubtedly, otherwise the Trade Boards Act as a Trade Boards Act ceases to have much meaning.

11,787. Otherwise it is a recommendation?—Merely a recommendation; and an optional rate on a Board, particularly in a case where you are dealing with unorganised workers, and perhaps unorganised employers, is a contradiction in terms; it means that it is no rate at all.

11,788. I suppose in connection with the trades with which you have to deal on your Boards there is a good deal of organisation, in fact?—Yes, there is a considerable amount of organisation, and I have often been puzzled in considering Clause 1 of the 1918 Act as to how the question of want of organisation has been brought in in certain trades.

11,789. The jute trade, for example?—The jute trade is an example; there, strictly speaking, you have organisation, a very complete or fairly complete organisation in the main centre of the jute industry, in Dundee; you have also organisation in the outside districts; and I do not know exactly what is meant by want of organisation in such a trade as that, unless in this sense, that all these various sections, or sections of unions, dealing with different parts of the country are not themselves formed into one single, compact, harmonious union governing the whole country.

11,790. They belong to general unions, to various unions, and not all to the same?—Not all to the same. I imagine that in that sense, of course, it would be perfectly correct to say there is no complete, compact organisation of the workers in that trade. That would be true.

11,791. You think that in those cases where there is organisation you could leave it to the organisation to secure them if they must have these optional rates?—It is a question of what is meant by "secure." If it means simply, fight it out and get something, I have no doubt they could; employers cannot get on without the workers; but if one means by the word "secure" to secure in the best possible way consistently with carrying on peaceful industrial trade relations, then I imagine that much better results could be secured by a Trade Board than by leaving it to particular sections—not always, but in

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

most cases—particular sections of the workpeople who in their different unions deal with various workers in a trade such as I am referring to. I think better results are secured in that way, but there is no doubt that it does not always follow that any particular section of workers in a trade such as I am referring to would secure more through a Trade Board than by direct relations and direct arrangements with their own employers. I do not think it follows at all. That is a question, however, which one cannot answer in the abstract.

11,792. *Sir Arthur Pease*: If you had a minimum time rate, would you have a minimum time piece rate?—Certainly, have all such other rates as you agree to fix.

11,793. And if you had a minimum piece rate?—Well, I do not know about a minimum piece rate.

11,794. Would you have that higher than the time rate?—Well, normally speaking it would be, would it not, a minimum piece rate?

11,795. To make that the basis of your piece rates?—But I think under the term "all other rates" I should include a piecework basis time rate which would, normally speaking, be higher than a general minimum time rate—not necessarily, but generally. The Trade Board Act, 1918, gives the Board power to fix a minimum piecework basis time rate lower than the general minimum rate, but that is not the normal case.

11,796. If you had those two rates, could you not leave the other rates to be fixed voluntarily?—Do you mean fix the general minimum time rate and piecework basis time rate, and leave the rest?

11,797. Yes.—Well, it seems to me that the piecework basis time rate is on a different footing from a general minimum time rate. I should imagine in some trades which I can think of it would be necessary; the two sides would find it necessary to go on to fix the piecework basis time rate; but that must be left for each trade to settle by itself. I am talking just now of what one might consider to be the general problem which Trade Boards as a whole might be considered as dealing with. I am not concerned with a particular trade. It might quite safely, it seems to me, be left to each Trade Board to settle what, outside the unskilled and semi-skilled rate, they would be prepared to deal with, and I have no doubt that they could settle for themselves.

11,798. In some industries it would be quite impossible to fix piece rates, would it not, because the conditions under which they work vary so greatly that what would be quite a fair piece rate in one establishment would be quite an unfair rate in another?—I think that is so, and I think more use should be made of District Committees just on that account. I agree.

11,799. If you take the coal trade, for example, which of course has not a Trade Board, the prices vary in every pit and every seam in every district?—Yes, that is so.

11,800. And that is based, directly or indirectly, on a time-work piece basis?—Perfectly; but it is partly for that reason that I think you ought to leave questions of rates higher than those for the unskilled and semi-skilled to the consideration of the Board as a block of rates apart, to be considered on their merits.

11,801. You would enforce them once they had been fixed?—Most undoubtedly; if the Board did fix them, most undoubtedly. Of course I see certain objections; it might be said employers will not agree, but I am not sure of that. I do not think it is a proposition that one could possibly regard as universal. Employers are not merely prepared, they are in some cases very willing, to fix certain rates, provided they can make those rates universal in the trade. And more particularly in times of prosperity it is necessary that they should be in the best possible relations with their workers; and for a further reason one could see that that would be so, because the workpeople in a time of trade prosperity would say, "Well, by the Trade Board we have only this unskilled and semi-skilled rate; look what the employers are doing; we demand that we shall have some more." Well,

to avoid trouble they would almost certainly agree to settle that at the Board. Otherwise you do not prevent the employees from striking, and then trouble would arise.

11,801A. By that process you would be making all rates standard rates and not minimum rates?—Not necessarily. It might be that in certain instances you would fix a piecework basis time-rate for a certain class of work; I mean that would cover the whole of the piece workers. In other cases you would go minutely into it, and fix what you call standard rates, as was done in connection, for example, with the spinners in Dundee, and as was proposed, at least, in connection with the Hessian weavers in the jute trade. That would depend on the trade. That might be left to a particular trade to deal with. It would all depend on circumstances. All I wanted to suggest was that the broad principles would be clearly indicated. If you do not do that, it seems to me you are running a great risk of creating trouble when on trouble need arise. The main trouble seems to have been due to the fact that in this 1918 Act it is proposed to fix a general minimum time rate for all classes of time workers, regardless of whether they are skilled or unskilled. Well, it is natural when that is done, when you have that power, that the Board should find it extremely difficult to draw a distinction between an obligatory and a permissive power. They say you have that right to fix a general minimum time rate for a skilled worker. That being so, suppose you fixed it for spinners or some other classes of skilled worker, the employees naturally say, "If you have done all this for skilled workers, why should you leave out the piece worker?" It is very difficult in practice to draw a distinction between obligatory and permissive powers. Now it seems to me that you can draw a clear distinction if you do what I have suggested, namely, say the obligatory power should be confined to fixing the time rate for unskilled and semi-skilled workers, and leave all other rates in a separate class by themselves.

11,802. *Mr Pugh*: Does that mean you would not make it obligatory to fix piece rates at all?—I should not make it obligatory to fix piece rates, because, for instance, in a very badly paid trade where piece rates were very low the piece-rates would in general be required to produce not less than the general minimum time rate which you fixed for the unskilled and semi-skilled worker. That would be the bottom rate of the trade, so to speak.

11,803. Does your argument lead to this, that you distinguish between unskilled, semi-skilled and skilled workers, whether a piece rate or a time rate is fixed?—Oh, no, I should have that to the Board to settle. I should say to the Board: "Now you can settle for yourself what you regard as semi-skilled or skilled; that will be for your technical knowledge to deal with; we should not do that beforehand for you. If you said that certain workers were semi-skilled, then you would deal with them accordingly."

11,804. If the Board had been able to come to an arrangement with regard to what was skilled or semi-skilled, you would not agree that it should be obligatory to fix piece rates for semi-skilled or unskilled workers, even where that might be the most suitable kind of recompense?—I am not quite certain that I follow you, but as far as I understand you my answer would be this. If the Board agreed that certain pieceworkers were semi-skilled, then it would be an obligation imposed on that Board, agreeing that such and such workers were semi-skilled, to fix the rate for them, and it would not necessarily be the same rate.

11,805. Might they, under your proposal, fix a piece-work rate if they thought fit?—If they regarded them as semi-skilled—well, it would become a piecework basis time-rate; it would be a time-rate for those workers. They would not be entitled under my suggestion to go into the details of the piece-rate, if that is what you mean. Is that what you mean?

11,806. I do not think I am quite clear as to what are your intentions. I rather gather from what you

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

said that you would confine the obligatory functions of the Board to fixing a time-rate?—For the unskilled and semi-skilled, that is so.

11,807. A time-rate only?—That is right.

11,808. So that if they fixed the piecework rate it would only be by voluntary agreement?—By voluntary agreement, yes.

11,809. *Mr. Layton*: But I understand that you include piecework basis time rates?—Yes, that is so at present.

11,810. *Chairman*: I thought you said no, that it should be a general minimum time rate?—But that would act automatically as a piecework basis time-rate.

11,811. Yes, it would; it would not be a separate piecework basis time-rate?—No, not separate.

11,812. *Mr. Pugh*: Do you not think you would have a good deal of disputation arise as to what was skilled and what was semi-skilled?—I have no doubt you would in certain trades.

11,813. And in that case would not your proposition rather tend to increase the friction on the Boards?—I do not think so; I imagine the two sides could be left to themselves to determine what would be skilled and what would be semi-skilled.

11,814. *Mrs. Lyttelton*: How is the decision to be taken as to what rates are to be considered or not considered; is that taken by vote of the whole Board? Supposing one party wants the skilled rates to be considered by the Board, and the other party does not, it would simply mean you would have a vote to decide?—You mean as regards the optional rates?

11,815. Yes.—The first step is to determine whether they will agree; the second is, having agreed, what powers the Appointed Members should have to fix the rates. This is how I should work it out if it was left to me: I should say, "Now, unless you can agree to settle these optional rates, I shall not decide the matter myself; I shall leave it entirely to you; I shall not interfere and say you must have optional rates." But having agreed that they would establish optional rates, I should then say: "I can exert such influence as I have and can vote to assist you to come to these optional rates in particular cases." I should then, so far as they asked for any assistance—of course, sometimes they do it outside the Board, but sometimes they ask for assistance—I should give them my assistance and should be prepared to vote one way or the other; that is, having determined independently of my Board that they would undertake to fix optional rates.

11,816. Of course, there might be an acute division at the very beginning as to whether a particular grade should come under the rate or not?—Yes. I think it would be in the best interests of the two sides that they should clearly understand one another, and that they should understand that on a Trade Board their business is to get along and not fight with one another; and I am sure if it were understood that they must agree to do certain things, otherwise the rates would not be fixed, it would be a better instrument for cultivating a good spirit between the two sides. I dislike very much to find a constant tendency on the one side to threaten and demand, instead of simply discussing the matter frankly and freely and openly, and saying: "We quite understand your difficulties; we are quite prepared to work with you if you will consider our point of view." It seems to me highly desirable to cultivate directly and indirectly a good spirit on the Boards, and I think if the optional rates were left just to the two sides—I mean if the question of whether they would fix optional rates were left to the two sides to be settled in the way I suggest—it might further that end; and in any case, if it did not, I think it is far better to guarantee the position of the unskilled and the semi-skilled workers by the Trade Board, than to run the risk of asking the Board to fix all sorts of rates on the same terms.

11,817. *Dame Adelaide Anderson*: They must vote according to their convictions, both the employers and the workers, if they are opposed?—Yes.

11,818. It would then be decided absolutely by the party which had the stronger organisation?—As to whether—

11,819. By the party of the two which was the stronger in organisation; so that they vote according to conviction?—Yes; you mean in settling the preliminary question as to whether there are to be optional rates.

11,820. Yes?—Yes, but the two sides are quite well able to look after themselves; they have good speakers on both sides, and they know their own minds at a given moment in the history of the industry, and I have no doubt that with a rising industrial prosperity or fair industrial prosperity, a strong case could be put up by the workpeople for the consideration of these rates which I have included in the second class. I do not think one would be risking anything of great importance.

11,821. *Mr. Layton*: Does your statement mean that the question of what rates are to be included in the first class, which is compulsory, and what rates are to be included in the other class, will rest with the Appointed Members?—Yes, it might in certain cases rest with the Appointed Members.

11,822. But your scheme generally really throws upon the Appointed Members the question of definition?—It might in certain cases.

11,823. *Chairman*: Surely the best way of solving that is to say the Board shall fix a minimum; they need not enquire who is skilled or unskilled; they fix the minimum rate which applies to everybody?—To everyone in the trade?

11,824. To everyone in the trade, yes. Of course, as a matter of fact, the skilled workers might get more by agreement outside the Board, or possibly by agreement on the Board, but when you have fixed the minimum general time-rate you have fixed the rate for unskilled workers.—That is so; but if you bring the skilled into consideration in settling that question the tendency is for the rate which would be asked by the workpeople to be far higher.

11,825. Is it so if you are simply fixing a minimum; we have been told by many witnesses that once you have fixed the bottom rate the skilled workers will get more?—Yes; by the bottom rate is meant what in the circumstances can be paid.

11,826. The minimum wage to be paid to the lowest grade of workers?—That is my suggestion.

11,827. *Mrs. Lyttelton*: But you want a second minimum for the skilled?—The skilled would be considered by themselves.

11,828. *Mr. Layton*: I understood Professor Baillie to say that he did not necessarily confine himself to only one minimum rate, and that the semi-skilled and the unskilled were not necessarily in the same category, and that the piecework basis time rate might, for example, be different from the general minimum time rate paid to timeworkers.—It might be if you went on to fix it.

11,829. Quite so. I mean you did contemplate the fixing of more than one compulsory rate by a Trade Board?—You mean that the minimum rate for the unskilled might be different from the rate for the skilled?

11,830. Yes, or the piecework basis time rate.—I do not know that we are quite understanding one another. My position is that you should regard as obligatory the fixing of the general minimum time rate for the unskilled and the semi-skilled.

11,831. One rate only?—One rate for the unskilled and the semi-skilled as a general minimum time rate, and then when you proceeded to deal with what I call the optional rates, amongst these optional rates might be the consideration of the question of fixing a piecework basis time rate for skilled workers. If you did agree to do so—it might cover an enormous range of skilled workers in certain trades—that would be also compulsory if the Board fixed it.

11,832. Then I misunderstood you: I understood you quite clearly to indicate the possibility of more than one obligatory rate, that is, more than one Class 1 rate?—I should doubt that, but it might very well happen.

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

11,833. *Mr. Pugh*: I understand you to say that you have different grades of semi-skilled workers: Would you fix the same rate for the whole?—I imagine in certain cases there might be a difference of opinion on a Board on that point. They might say: We should like a different minimum for the semi-skilled, different from the unskilled. I could quite imagine that, and if they did do so, why then there is no reason why they should not.

11,834. You say that would have to be by voluntary arrangement?—Oh, no. The Board would say: "There are certain unskilled workers and certain semi-skilled workers in this trade." They might say, "We are going to have one basic rate to cover these." Another Board might say, "We shall have one rate for the unskilled and another for the semi-skilled," and proceed accordingly, but in general what I am after is that there would be one minimum time rate for the skilled and unskilled.

11,835. You take your people, and you say: "These are unskilled and semi-skilled; now fix your rates for these?"—Yes.

11,836. It may be one rate, or it may be another rate, but these are the people you are compelled to deal with; those above, who may be regarded as skilled, will be settled by voluntary arrangement?—By voluntary arrangement. I should imagine in most cases this would happen, that they would say: "We shall fix one general minimum time rate for both, semi-skilled and unskilled." But I should see no objection, if it was proposed by a Board, to fixing the two; and in either case it would be obligatory, if they decided that there was such a difference between unskilled and semi-skilled, and were prepared to fix a different general minimum time rate for these. I see no objection to that.

11,837. You propose voluntary negotiation in the case of the pieceworkers. Have you made provision for the cases where they cannot agree? What are you going to do then? Are you going to submit it to arbitration, or something, as occurs, of course, in well-organised trades?—Well, if they did not agree the Board at least would not fix it.

11,838. Then they would not be fixed at all?—They would not be fixed at all.

11,839. But you would not leave it at that?—The optional rate, do you mean?

11,840. Yes?—Most certainly I should.

11,841. And you would leave the employer so that he might pay the minimum and no more?—That would be the result.

11,842. Would that not have a tendency to lead to strikes on the part of skilled workers?—That seems to me to be the kind of pressure which probably the workpeople could bring to bear on the employers on the Board to induce them to come to some arrangement.

11,843. *Chairman*: That is so in the organised trades, is it not?—Yes.

11,844. *Mr. Pugh*: But surely your machinery would be very incomplete if you did not provide for something where the parties could not agree?—Well, I have suggested at the end that it might be worth while regarding arbitration as an extension of the field of the Boards, and I do that in order to meet this difficulty which you are suggesting. I had that in mind, but I could quite well understand, particularly in a certain district, for example, where a small manufacturer was doing very well, his workpeople might say: "We ought to have more, and if you will not pay it we demand it, and we demand an enquiry so as to get it."

11,845. *Mrs. Lyttelton*: And you think that might make the employers welcome the optional rates?—That is so.

Mr. Pugh: If you had an important section of workers in a trade that would undermine the value of the Trade Boards. (*To Mr. Layton*): Do you see my point about the two rates for the semi-skilled—

11,846. *Mr. Layton*: I rather thought that my interpretation was the right one.—What I had in view was what would happen in general, and what

might happen in particular cases. In particular cases I quite understand that the Boards might consider such a difference.

11,847. My point was this. I quite understand that if you have power to fix one rate, and one rate only, and nothing else, it comes in Class 1; that is quite clear and simple.—Yes.

11,848. But if you make any breach in that, and I think in answer to *Mr. Pugh* you did indicate that you do suggest the possibility of varying that with two or three rates, the moment you change that then you raise the whole question as to what other classes of workpeople are included, and it seemed to me that you were throwing on the Appointed Members the burden of the interpretation of the Act in that sense.—Well, of course it would be after discussion between the two sides as to what was semi-skilled, no doubt, as distinct from skilled; but I am quite prepared to leave that point open. That is a suggestion.

11,849. I was not objecting to your statement at all of questioning it in any way; I only wanted to be clear.—My primary intention was that in general there should be one rate. That was my primary intention.

11,850. *Chairman*: You were rather driven into it in cross-examination. You mean that there should be one general minimum time-rate for the trade, and that everything above that should be fixed by agreement?—That is what I had in mind; but the suggestions made to me had not occurred to me as a matter of fact, and I am quite prepared to concede that in certain cases it might be possible for a Board to fix obligatorily under the first head two, one for the skilled and one for the semi-skilled, but I should think it is very unlikely.

11,851. You would get complications?—Yes, you would.

11,852. Might I put one other point to you about the homeworkers. Of course, the homeworkers work by bits, so to speak. In some of the small trades, such as dressmaking and sewing, and so on, they work at home when they have time.—Yes.

11,853. It is very difficult to regulate their wages by any time-rate, is it not?—Yes.

11,854. Would it not be necessary to make an exception in such a case as that?—Yes, I should think that is very probable, but I have had no cases of homeworkers.

11,855. In those cases it might be made compulsory on the Board to fix piece-rates for homeworkers?—Yes, that might be so. The suggestion I have put forward here would save a good deal of friction; it would meet the requirements of the 1909 Act, and those requirements were to a large extent involved in the 1918 Act, and it would save the position of the employers at the present time.

11,856. *Mr. Pugh*: I want to be quite clear on this point as to what grade of worker you would take in fixing your general minimum time-rate.—I should leave that to the Board. It would all depend on circumstances.

11,857. Would that not lead to argument as to what worker should be taken unless you said the lowest grade?—Well, it is pretty well understood in a given trade that such-and-such workers are unskilled, and it is generally understood, not as regards particular classes of workers, but generally understood that such and such a person is semi-skilled and that such and such another is skilled. You are quite familiar with that, so I do not think there would be much difficulty in settling what would be the skilled, what the semi-skilled and what the unskilled.

11,858. Except that it is the practice in industry to distinguish rates as between the unskilled and the semi-skilled?—Yes, that is so, but I have always found it difficult to determine what was an unskilled worker and what a semi-skilled worker. I have heard it said that a man who wheeled a wheelbarrow was a semi-skilled worker, but matters of detail like that must be left to Trade Boards. The members

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

of Trade Boards must be regarded as competent to deal with such matters as that, or else they ought not to be appointed at all.

11,859. You attach importance to the Boards doing as much as possible for themselves?—Undoubtedly.

11,860. *Chairman*: Now may we pass on to page 8?—Before passing on, while I do not want to attach any importance to what I say, yet I would suggest that you might give consideration to the power of suspending certain optional rates. That does seem to me a valuable point. I have found it time after time in dealing with the Boards with which I am concerned, and I am sure had we been able to suspend rates it would have helped us very much.

11,861. *Mr. Pugh*: I want to put a question to you on that: What do you really mean by the power of suspending the optional rates? Do you mean that the employers should be able to approach the Trade Board during a period of bad trade and ask that the rates should be entirely suspended?—The optional rates, yes.

11,862. Then what would happen during a period of good trade, or even boom trade? Would you leave the parties with the same liberty?—Quite; that is my reason for saying "suspend" instead of "cancel." We have power at present under the Trade Board Acts to cancel, but it is very difficult to do, and I see no reason why once a Board has fixed certain optional rates we should be deprived of the gain we have got. If workpeople through certain negotiations in a time of favourable trade have secured certain results in the way I have described through this optional procedure, if they have secured certain advantages, I see no reason why they should give them up, and therefore I see no reason why you should cancel; it does seem to me to be an advantage to suspend for a certain time. As a matter of fact, that in principle—not exactly, but in principle—occurred in connection with a certain notice of proposal concerning fairly high rates on one of my Boards.

11,863. *Chairman*: You mean suspend by agreement?—No. I say we in principle did the same thing; we had a notice of proposal arranged and we discovered that the interval which elapsed between the time when we were discussing and confirming this notice of proposal and the time when we had to fix it had been a period of very bad trade. It was suggested by the employers: "Now, we had better hold this up and wait till trade improves, to see if it is going to improve before we proceed to fix it"; and we did so.

11,864. That was before you fixed the rates, but what I want to know is, is your proposal that the Board should be able to suspend the rates by an agreed resolution?—By an agreed resolution, yes.

11,865. *Mr. Pugh*: During the period of suspension what would happen; would there be any rate actually in operation?—Certainly; there would be, of course, the general minimum time rate.

11,866. Only a general minimum, time rate?—Yes. As I say in the first part of Clause (c), if you were going to alter that you would have to do so in the usual way by varying it.

11,867. So that if the employers had the desire and the power they could at once drop any rate which had been fixed for skilled workers down to the minimum?—They could.

11,868. Do you think it would be an advantage to leave the trade in such a position that during bad trade the employer could ask for suspension, and during good trade the operatives could ask for suspension, the one with a view to enforcing lower rates and the other with a view to enforcing higher rates?—I think if the two sides of the Board came to understand one another they would manage that perfectly.

11,869. If they cultivated the right spirit, would not there be more hope in an agreement between the two sides that would remain in power during these periods of good trade and bad trade—that they would keep together and agree on a rate if there had to be a change?—You mean instead of suspending

the optional rates and practically reducing the skilled worker to the general minimum time rate, they might agree to some other rate?

11,870. Yes, that the same thing should come into operation as operates in well-organised industries: that they should meet together, and that the agreement should, say, contain a clause that by giving certain notice they might agree on a different rate, and that the rate would then become the rate which would be enforceable by the Board?—There is no difficulty about that; that could be quite well done as a substitute for the rate which was suspended; but I dislike asking the workpeople, having gained a certain amount of, say, high piece-rates, to throw that over during a time of bad trade. They might suspend it and make any other arrangement they liked; they quite well could do so.

11,871. *Chairman*: For a limited time, I suppose?—For a limited time, yes.

11,872. *Mr. Pugh*: Would not the term "vary" be better than "suspend"?—Well, I do not think so. I should leave any arrangement like that outside the operations of the Board.

11,873. *Sir Arthur Pease*: But the custom in other trades is that what you call the price lists are left untouched, and in bad times they are simply varied by a percentage up or down. Could you not get the employers and employees to agree to vary it by 5 per cent. or 10 per cent. or 20 per cent.?—As a matter of fact, I do not think the difficulty suggested by Mr. Pugh has seriously occurred in the trades under my Trade Boards. What has happened is that they have left their piece-rates practically in operation although they could have brought them down to the level of the general minimum time-rate; they have left them in operation. They have given me figures to show that that is so, so I do not think as a matter of fact, except in rare cases, it would necessarily mean that when the rate was suspended all the skilled workers would be brought back to the level of the general minimum time-rate. It might, of course, happen, and in such a case it would have to be considered, no doubt, on its merits; but it seems to me that if you had sufficient good feeling on the Board to establish optional rates at all, that same good feeling would operate to safeguard the pieceworkers at such a time as we are having now.

11,874. *Dame Adelaide Anderson*: Is it not more than a question of good feeling; is there not liable to be a conflict of interest that has got to be resolved?—Yes, I have no doubt that that is so, but it seems to me that the establishment of such optional rates as I have indicated does mean that the two sides understand each other fairly well and are prepared to meet difficulties.

11,875. *Mr. Pugh*: I suppose in a case of suspension you would say that the whole trade must be subject to the decision arrived at by the Board; if not, would you not have the less satisfactory employer taking advantage of that and suspending on his own account without any arrangement for variation which might be made by the better employers?—It would be a decision of the Board.

11,876. And accepted by the Board?—An agreed decision of the Board; and it might be that the Minister, on considering the matter, might find it desirable that the Appointed Members should have a deciding voice in suspending a rate; but it would be better for the two sides to settle it themselves.

11,877. You are suggesting more power and greater autonomy for the Board itself?—Yes.

11,878. *Chairman*: Then you suggest using a different mode of enforcement of the rates?—Yes, I think there is something in it; at least, I put it forward as a suggestion for your consideration.

11,879. It is that the obligatory rates should be enforceable, as they are now, by prosecution?—Yes.

11,880. And the optional rates by civil proceedings?—Quite. The one should be under the criminal procedure and the other under the civil procedure; that is all it really comes to. I think there is such a difference between the two rates that on my suggestion it is worth while differentiating in the

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

method of enforcement, and I think if you differentiated in that way, all that would tend to induce employers on certain Boards to form such optional rates. They would feel it was their own doing, and that they were not going to be looked upon as criminals if they did not carry it out.

11,881. *Sir Arthur Pease*: How far would you go back in enforcing a rate—three or six months or a year?—How do you mean?

11,882. If an employer had not paid the rate and did not find out for a considerable period that he had not paid the rate, how far would you go back?—Right back to the time when the rate was fixed.

11,883. It might be years?—Quite likely. I think that is perfectly fair. An employer is responsible for the rates paid to his workpeople; he is under the Board, and he knows he is under the Board, and if he makes a mistake, voluntarily or otherwise, I think the worker has no right to be penalised for that. He is entitled to get the rate.

Mr. Pugh: I think we do that in our own trade, Sir Arthur.

11,884. *Sir Arthur Pease*: But a lot of people do not know they are under the Board at all, in these little places?—Quite so. That is a matter for the Trade Board Office to settle.

11,885. That is why I asked the question; a lot of people do not know hardly that there is a Trade Board at present?—Yes.

11,886. It might be absolute ruin to them to collect all the back pay from them?—You would perhaps have to spread the payment over a certain time; you might compound or in some way meet their difficulty; but you would have to go back to the original date.

11,887. I am not thinking of the big firms—the big, well-organised firms—at all?—Quite so, but it seems to me that it is desirable, if you are going to protect the worker, that you should do so as completely as possible.

11,888. *Mr. Bell*: I take it that what you mean is, where it was proved that an employer knew that he ought to have paid a certain rate and he had paid less than that, then he should not gain anything by not having paid it?—No. I have no hesitation in saying that I should not agree to that.

Sir Arthur Pease: It all turns on the words "that he knew that he ought to have paid."

Chairman: An employer is supposed to know the law.

Mrs. Lyttelton: Sometimes you can pretend you do not know.

11,889. *Chairman*: Then have we covered your next paragraph by that. May I go now to District Committees? Of course, you understand your statement will be printed as part of your evidence?—Yes.

11,890. *Mr. Pugh*: About District Committees, there seems to be a considerable difference of opinion on both sides of the Boards as to the utility of District Committees?—Yes.

11,891. What would be their relationship to the central body, to the Board itself? What time would you give them, if any?—Well, what I had in mind was a differentiation of prosperity and conditions of work as between particular districts, and I should allow a District Committee to handle its own particular affairs, its own interests as distinct from the interests of any other district, as freely and as completely as possible. If they decided to bring their recommendations to the Board and ask the Board to sanction them, then they would be enforced on that district as a decision of the Board; but if they said, "No, we have quite a good organisation in this district; we understand one another, the employers and the workers, and we want to work together; we have got the sanction of the Board to establish this District Committee and deal with our own affairs as a little centre of organisation in the trade; we do not see why we need ask the Board's sanction for our decisions; we get along nicely," then I do not see why you should not give them such powers.

11,892. But would you give the Board no power to review the arrangements they made?—No, I should leave them entirely to themselves to settle what they liked.

11,893. *Sir Arthur Pease*: Would they be able to enforce their decision?—Yes, I should think, in many cases, they would. The workpeople, if they made an arrangement with the employers in a given district, would bring pressure to bear on a particular employer if a difficulty arose. Local feeling is pretty strong, and local reputation has to be kept up; no employer in a particular district would care to be published abroad as having refused to implement a bargain into which he had entered, and so on. All that would tend, it seems to me, to give the District Committee working in the way I have suggested very considerable powers to carry through such an arrangement as that District Committee arrived at without asking the sanction of the Board at all, and it would really free the Board from a good deal of trouble.

11,894. My question was rather, would you give them legal powers?—No, not legal powers. Only the Board acting as a whole would have the legal powers.

11,895. *Mr. Pugh*: In effect that would have the effect of setting up extra Boards on a geographical basis?—No, I do not think so; there would be a particular area which was handled by a District Committee of the Board, and had, so to say, in that sense the general approval of the Board, but it might be allowed to come to decisions affecting its particular area which were of no interest to anybody else at all. I see no objection to that.

11,896. It is rather outside a proposition for the general adoption of District Committees?—Yes; I am suggesting an alteration of the present powers. I suggest they are both too large and too small. I am prepared to give them what you might call these enlarged powers, but under the 1918 Act District Committees seem to me too cumbersome and expensive in their operation, and it is partly for that reason, I am sure, that the Boards as a whole with which I am concerned have been reluctant to establish District Committees.

11,897. *Chairman*: Have you any District Committee at all on your Board?—No District Committee in the proper sense of the term. We have fixed district rates, but we have not District Committees in the proper sense of the term.

11,898. If these District Committees were set up should not they be consulted before the rate is proposed, and not after it is proposed, but before it is fixed? We have been told that to consult them after the proposal is published is generally useless, because the Board is very unwilling to go back. It occurred to me that it might be well if they were consulted before the rate was proposed?—How would you propose to do that? Would you send a question down from a Board to a District Committee and say: "Would you indicate what would be a fair rate for this particular work?"

11,899. Yes, or "Would you advise us to propose such and such a rate?"—But suppose they did not do the class of work at all?

11,900. Then you would not bother?—But if you had District Committees all over the place?

11,901. Then you would not trouble about their answer, at all events?—Yes, but they would have effective power on the Board to insist that their answer should be carefully considered by the Board.

11,902. Quite so.—In the case of Dunfermline you have the fine end of the flax trade, the linen trade: you might have a District Committee there; then suppose the Board wished to propose a rate and asked the District Committee in Dunfermline for their opinion, and asked similarly the heavy end of the trade, say, in Dundee or in the North-East of Scotland, "What is your opinion"?—well, if it concerned the heavy end of the trade, strictly speaking, the Dunfermline opinion would have to be considered. They might say: "Well, we do not think it is our job," but you would have to ask them.

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

11,903. So you have now if you have a District Committee; you must ask the Committee, only you must ask them after the proposal and not before. That was the point I meant.—At any rate, that would decrease the length of time and the cumbersomeness of the present system, and would expedite the proceedings. But I do not think it would do so to any large extent, because under the present system once you have proposed your rate by the Board you have to send it down for confirmation to the District Committee.

11,904. *Mr. Layton*: You contemplate having differences in the general minimum time rate, local variation, I understand?—That might be. I should doubt it, but it is a possibility.

11,905. I thought so, because on page 4 you refer to differences in the cost of living.—Quite, and that might very well be taken into account, of course.

11,906. But taking any of your criteria you would have different conditions in different parts of the country in dealing with the general minimum?—I should think it would be very difficult to get a different minimum time rate for the unskilled in different districts.

11,907. In any case, you would not give the District Committee any power except to make a recommendation?—Oh, certainly not, as regards that.

11,908. I ought to have asked you this before: Could you give us any indication with regard to differences in the cost of living? As regards Scotland, you referred specifically to the differences in the cost of living; could you tell us whether those are very great in Scotland?—It is very difficult to get at exact figures regarding that. You find one side saying one thing and the other side saying the other. The employees say there is no difference in the villages in Scotland and the big towns, and, of course, the employers say the very opposite; but, for instance, as regards the price of coal, that does vary in different parts of Scotland. The cost of transit of coal to Forfar is different from the cost of transit of coal to Dundee, because, of course, there are no coalfields in Forfarshire, whereas Dundee is much nearer the coalfields. Items like that come in, but it seems to me that there are compensating circumstances in country districts. For example, in the country milk is cheaper, and you may get certain articles of clothing cheaper than in the other districts; perhaps poorer stuff goes there. Items like that would, in most cases, affect the cost of living, but it is very difficult to get exact figures in the matter.

11,909. You are satisfied that there are substantial differences?—I think so myself, but I have no precise figures to justify my statement.

11,910. None of your Boards have given effect to that?—No.

11,911. *Mr. Pugh*: It would not be practicable to take into account those differences in fixing a general minimum time-rate?—I agree.

11,912. You would get circumstances which would upset all your calculations?—Yes.

11,913. *Chairman*: To pass on in your statement, you describe the process of settling the rates. I do not want to question you myself on that. Then as regards the piecework basis time-rate, you say that is generally determined by reference to the general minimum time-rate?—Yes.

11,914. I suppose a percentage is added on?—Yes, but it might be lower; we are at liberty to make it lower.

11,915. It is unlikely to be lower?—It would very rarely be lower.

11,916. *Sir Arthur Pease*: It would be very foolish to have it lower, both for employers and for employees?—I think there must have been a reason for suggesting that it might be lower, otherwise it would not have been put into the Act. As a matter of fact it generally is higher. I have never been able

to discover the circumstances in which it would be lower, but I have no doubt that there were such circumstances, otherwise it would not have got into the Act, I suppose.

11,917. *Chairman*: I am told that it may happen if the piecework basis time-rate is averaged according to age, or something of that kind.—Oh, yes, that might be so.

11,918. Then you deal with enforcement of the rates, and you think that that should still be in the hands of the Minister?—That is my view. It seems to me to be the necessary consequence of making the Minister responsible to Parliament for the administration of the Act.

11,919. But you think that they should be enforced?—Most certainly; it is an Act of the Board, and it is the only possible substitute for the complete organisation which you have in the Industrial Council, and generally the complete agreement which you have on an Industrial Council.

11,920. You say that the Board should exercise its power to receive complaints of non-payment of a rate?—Yes, I think it would be very useful if we could have that power in the way I suggest. The Minister of Labour might himself appoint a Chartered Accountant locally to assist the Board if the Board thought that such and such an employer was not in fact paying the rate, if they had complaints; or else a person might be allowed to put a request before the Board, independently of complaints, to make investigation.

11,921. Of course, the Minister has power to investigate figures?—Yes, but he does that generally through the Home Office investigators, who are no doubt the most skilled in the country, and perhaps may be the only people of any service in certain trades where the piecework was very complicated; but in many cases where piecework rates are not complicated an intelligent accountant could find out whether they were working properly.

11,922. *Mr. Bell*: Do you think it would be an advantage if the Board had power, where complaint had been made to it that certain employers were not paying the rate which they had fixed, to instruct their own secretary to investigate, and that the Board then should have the power to take proceedings?—No, I do not think that would be desirable at all. I think we ought to centralise the authority which is going to enforce the rates. If you left each Board to take its own way and enforce the rates on its own account, you would have one Board taking one line and another Board taking another line, and that would not only lead to complications, but to great disturbance of trade as a whole. People would feel in certain cases that the Trade Board was acting arbitrarily and in an officious and disagreeable fashion, and another Trade Board might be working smoothly; and officials would be blamed, the Trade Board would be blamed, the Appointed Members would be blamed, and I think it is better to have a simple uniform method of enforcing, and the best way to secure that is to have one at the head, namely the Minister.

11,923. *Dame Adelaide Anderson*: And you want trained inspectors and prosecutors?—In the case of certain trades the piece-rates are extraordinarily complicated, and only a very skilled investigator probably could see that they were carried out; but in other trades the piece-rates are relatively simple, and an ordinary trained accountant or some such person would be quite competent to satisfy all that the Board required; and, of course, it follows from that that it would be ridiculous to ask every Board to appoint chartered accountants. You would have to take into account the circumstances of each Board and the sort of trade you were dealing with. But I make that suggestion as a way of, to some extent, meeting the difficulty which the Minister has at present in enforcing the rates, a difficulty which the Boards feel very strongly. If you have a Board fixing and legislating rates, it seems to me a futile proceeding if you have no guarantee.

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

11,924. *Chairman*: Then, with regard to confirmation, you think the Minister should retain the power to confirm a rate or to refer it back?—Most certainly, for the same reason. I could quite imagine some other authority, but in the circumstances, since he is responsible, even if he consulted some other body in finding out whether the rate was a fair one, he is the person who must ultimately say yes or no to the rate.

11,925. *Mr. Pugh*: Later on you come to a suggestion which I gather is the setting up of some central authority. Could not a body of that kind relieve the Minister to some extent?—A central authority for the purposes of arbitration?

11,926. Not necessarily; for generally co-ordinating the working of the Boards. It was suggested that the rates might come under the view of a central authority?—A Central Trade Board Authority?

Mr. Pugh: Yes.

11,927. *Chairman*: I am not sure that that is suggested in Professor Baillie's proof?—No, it is not in that; I am suggesting there specifically a Central Board of Arbitration.

11,928. *Mr. Pugh*: Oh! that refers only to arbitration; I see?—My objection is this: You mean practically a Central Board, a sort of super-board looking after all the Trade Boards?

11,929. Yes?—That seems to me very inadvisable for a number of reasons. If you are going to make the Minister responsible to Parliament there should not be a buffer between the Minister and the Boards which are primarily responsible for legislating in the different trades; you undermine the power of the Minister, you create a possibility of friction between the supreme authority (the Minister) and this Central Board, and to a large extent you destroy the prestige of the individual Boards. In addition to that you will make those individual Boards very self-conscious; they will begin to think: "Now, what will the Central Authority think of this and that," and a Board might even consult the Central Authority before it came to a decision. You will to a large extent undermine the sense of responsibility which the individual Boards have if you have this super-board. It seems to me from the point of view of administration that it is all-important to have a single person who is responsible for carrying through this process of confirmation. You can deal with a single person, or find fault with a single person, but you cannot attack a general body of men. It is impossible to find fault with a general body of men; you do not know who is primarily responsible for the decision; but in the case of a particular person you do know what to say, and you do know the person you are dealing with, and you can go direct to him. An impersonal responsibility seems to me to be an extremely dangerous, or at least unsatisfactory method. Personal responsibility, it seems to me, is the best way to carry the administration through, and for that reason the fewer intermediaries you have between the particular Boards and the primary authority, namely the Minister, the better.

11,930. He ultimately would have the confirming authority?—Yes, but I should make him directly responsible and allow no one else at all to intervene, which would create possibilities of friction, and, I think, lead to endless expense.

11,931. *Chairman*: Is there not some advantage in having a body which could co-ordinate the decisions of the various Boards and bring them more into line?—I think if that is necessary then it is a mistake to set up so many Boards. If you require to have co-ordination you should have a single Board dealing with various trades which are closely allied, and in that way obviate the necessity for co-ordination.

11,932. It is a question of degree?—It is a question of degree, but the degree is important. It seems to me that a co-ordinating body would postpone the decisions of the Board—would postpone fixing the rates. It would lead to constant conferences between the central body and the individual Board; it would arrive at a result which would please no particular Board at all, probably; and except for purposes of

consultation—if that is what is meant by this Central Board—consultation with the Minister, advice to the Minister, I see no advantage in having such a central body as is referred to. Certainly as a super-board, if I might call it so, it seems to me to be an entire mistake.

11,933. *Mr. Pugh*: On such questions as scope, for example, could you confer?—Yes, an advisory authority, if that is what you mean by this super-board. Of course, as a matter of fact at present, as I understand, the Minister does consider these questions of scope very closely, and sends them down to the various Boards in case of difficulty. But it seems to me that you have at present something corresponding to this Central Board as an advisory body; in the Ministry of Labour you have a number of trained officials who have made it their business to understand a particular trade and its various ramifications, and who give suggestions or advice to the Minister when a problem does arise in a particular Board. If you merely mean an advisory authority, well, as I say, there is something at present at the Ministry of Labour as distinguished from the Minister. If you mean a super-board I do not think there is any point in it at all; indeed, I think it would be a serious encumbrance, because these particular Boards which you set up are by hypothesis self-legislating in their trade. If you have a central Board it is tantamount to saying to the individual Trade Boards: "We do not consider you sufficiently competent to do your job."

11,934. *Dame Adelaide Anderson*: Questions of demarcation you would leave entirely to the Minister?—He would have to consult the Boards, but he does so at present.

11,935. And somebody must decide in the end?—Yes, and that should be the Minister. Either the Boards are self-legislating or they are not. If they are not self-legislating then it seems to me that the purpose of the Act is not being fulfilled, and cannot be fulfilled. If they are self-legislating, make them as completely responsible as they can be and let the Minister be the only person who can revise and supervise their actions. That seems to me the perfectly straightforward way to proceed.

11,936. *Sir Arthur Pease*: If it was an Advisory Board would you make it compulsory on the Minister to consult that Board?—To consult the Board?

11,937. To consult the Advisory Board?—If I may say so I would distinguish between an Advisory Board and a Board of Advisors. If you mean a number of people grouped round a Minister, permanent officials whom he is to consult, then I imagine he does do that at present; he does have a body of permanent officials whom he consults. If you think it would be better to establish such a body, so to say, under the Acts, that is another matter. But an Advisory Board is a very different matter.

11,938. The view has been put forward that the Minister in making up his mind sees all sorts of people in an informal way, and where there are objections and so on, it would be much better if that was put into a more formal shape rather than allowing the man who shouts loudest to get the most attention?—That seems to me to be a mere matter of departmental administration.

11,939. But it has been suggested by some witnesses that if they had this Advisory Board, or whatever you like to call it, and the Minister could consult it then the objection would be brought before that Board in a formal way?—Without seeing that matter expressed in great detail it is difficult to know exactly what is meant; but how could you constitute such an Advisory Board: from the various trades, or from the officials from some other Department, from the Board of Trade—where are they to come from?

11,940. It was suggested earlier by the Chairman, I think, that there should be one strong man as Chairman and members from each side?—To determine questions of scope, or to confirm rates, or to suggest what?

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

11,941. If the Minister chose to refer questions of confirmation of rates and if he chose to refer questions with regard to scope, and so on?—But what advantage would the Minister have beyond that of consultation with this Advisory Board? He cannot delegate his power, as far as I can see, under the Act. He is primarily responsible to Parliament, and he cannot take refuge behind an Advisory Committee. He cannot say: "An Advisory Committee advised me to do so-and-so, and I took their advice." Parliament will say: "If you have not administered the Act properly then you are not in the right place." It seems to me that the Minister cannot take refuge behind an Advisory Committee. He is either responsible to Parliament or he is not responsible to Parliament, and except for the purposes of administrative difficulties suggested by the Chairman, I do not see any value in it at all.

11,942. It has been rather put by various witnesses that all this is done in the dark; no one knows what is being said in favour or in opposition, or anything else, whereas if they had an Advisory Committee the thing would have to be put forward in the open, and if one side made objections to the rates being confirmed the other side would have the right to answer them, and so on?—You mean an Advisory Board for the purpose of considering the objections to the rates which have been put forward in the case of any particular proposal: is that what you have in mind?

11,943. One of the things, yes.—Well, it seems to me, beyond making more regular and more evident to the Boards what powers and what arguments determine the Minister in coming to a conclusion regarding the objections to the rates, that there is no special advantage in such a Board. It seems to me a mere matter of regularisation and explaining to the Boards what the authority is which settles whether such and such a proposal shall or shall not be confirmed. That, as I say, is a matter of inter-departmental administration rather than anything else.

11,944. *Mr. Pugh*: Are you afraid that there would be undue interference with the function of the Board?—I am quite certain that if you had anything like a super-board it would lead to great trouble. It seems to me that you must either give the Board complete power in its own trade or nothing.

11,945. *Mrs. Lyttelton*: Only there are certain considerations which affect the whole country and all trade which are not within the cognizance of a particular Trade Board?—For example?

11,946. Well, the interests of the consumer, for instance?—I thought that would be the answer. I realise that, but it seems to me it is the business of a Trade Board to consider the interests of the consumer, and naturally a Trade Board does do so. It is the employer's business to think of the consumer, and he is not likely to fix a rate which, when fixed, will make it impossible for the consumer to buy the article.

11,947. But trades interact so; it is difficult to say what is going to affect trade generally?—Quite.

11,948. *Dame Adelaide Anderson*: There are questions of demarcation which the Boards with their concentrated knowledge cannot solve satisfactorily?—I have seen that difficulty raised, but it seems to me that it is a general problem. I have always found it very difficult to know how you are going to separate trades from one another so as to constitute a specific Trade Board. At present there is a want of what I may call naturalness or obviousness in the basis on which a Trade Board is set up. If you take certain sections of a trade, or what is called a trade, say, the Jute Trade, and you say that these shall be considered as falling under this Trade Board; then you take another section of the Jute Trade Board; then you take another section of the Jute Trade Board that shall not be considered as falling under the Jute Trade Board, that has created very great difficulty—I mean this question of definition of the area covered by a given Trade Board, and I recognise that it is a problem of very serious importance in the working of the Act.

11,949. But it is one in which you do not want arbitrary decisions?—That is quite true.

11,950. You want reasonable, common-sense decisions having regard to all the existing circumstances?—That is quite true, but whether you would secure that by some Co-ordinating Committee of the Trade Boards, I do not know.

11,951. Something of the same kind as the Boards themselves, with trade knowledge?—Really a super-board, that is what it comes to be, which would revise all the decisions of the Boards.

11,952. But need such a Board revise all the decisions? Could not it only deal with certain things which were brought before it, certain questions allotted to it, such as demarcation?—As I have said, I am not certain what powers that Advisory Committee would have. If it were there to be consulted by the particular Boards and to be available in time of difficulty, for instance, on questions of demarcation and scope, I could see very great use for it; but if it is to be there to impose its will on the particular Trade Boards independently of the Minister, or to impose its will on the Minister as well—

11,953. That could be provided against in its constitution?—Yes. Well, if, as I say, its functions were primarily advisory on all matters connected with the various Trade Boards which overlap or are interlocked, and if it were there simply to assist the particular Trade Boards to carry out effectively what they are there for under the Act, then I would agree that it would be a very useful body to set up.

11,954. And for solution of difficulties which no one Board could settle by itself?—Yes, that would be excellent. As long as it did not interfere with the primary function for which each Trade Board is set up, and the primary responsibility of the Minister, then I should not object to it.

11,955. *Mr. Pugh*: Would you object to its initiating proposals which it thought might be of advantage to the Boards, for instance, overlapping as between one Board and another?—Suggesting how that might be overcome, you mean?

11,956. Yes.—No, I do not think there would be any difficulty in that as long as they did not issue commands; but speaking for my own Boards, they would strongly resent having any central authority coming between them and their direct responsibility for administering the affairs of the trade.

11,957. It would be a bad thing, you think, if it weakened the autonomy of the Boards?—Yes, and they are very troubled when they see on the horizon a new piece of departmental or governmental machinery which is going to interfere with them. You can quite understand that, and that is what I am trying to express on their behalf, that they do feel that if there is any value in their Boards at all it comes from their autonomy.

11,958. *Mr. MacCallum Scott*: You are against a super-board for industry generally?—Oh, most certainly, yes.

11,959. Then how about groups of kindred trades, say, such as there are in the Coal Trade—that, of course, has not a Trade Board—or some of the Textile Trades, where you have Boards overlapping each other, to some extent, in factories? Would you have an objection to a super-board for a group?—Well, it seems to me you would be just creating, if you had a super-board, the same difficulties which arise with a variety of Boards. We had that problem under consideration at a Co-ordinating Committee of five Boards the other day, and the proposal was made to group these five Boards under one Board and have sectional committees for the various Boards. Well, it does seem to one that you will have an immense Board, difficult to work, the sections creating difficulties as between one and another—

11,960. I appreciate the argument against the idea, but I was just wanting to know your view.—That is my view.

(Adjourned for a short time.)

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

11,961. *Chairman*: We come now to the suggestions as regards machinery. First with a view to saving time you propose that the Minister should consent to a rate forthwith if it is an agreed rate, and that objections should be dealt with within a month?—Yes. That seems to me to be a suggestion more by way of indicating that at all costs we must try to avoid the delay which hitherto has been so prevalent in the variation of rates and the introduction of rates. That is felt as one of the strongest objections to the present Act as it stands, and to the general machinery of the Boards accordingly.

11,962. Then you suggest that the Board might hand over the consideration of objections to a Committee?—In such cases as I have indicated, that is where the rate is agreed and there has been no trouble about it. Of course I agree that that might be a difficulty, and I can see objections to it, but it is a suggestion which I think is worth considering in order to expedite the matter, and to prevent expense.

11,963. The result of that would be that the objections would not have to be considered by the whole Board?—Yes, that would be so in general, but in certain cases as the result of sending out a notice there are no objections at all to a rate. It would have to be in the circumstances of the case of course. It is a more matter of machinery, but I think a power like that would be useful and I do not think it would be abused.

11,964. *Mr. Pugh*: Is it possible to get the opinion of the different interests before the rate is varied, and so do away with the necessity of calling for objections? If everyone is informed of the intention to vary a rate—I am thinking now of alterations—and if everyone is aware that that is being done, then they have an opportunity of giving their opinion; and when once an arrangement is made, should time be given afterwards for objections?—Yes, that would be useful I think, but it has this objection: that you assume that the Board is representative of the trade, and therefore that both employers and employees are well aware of what is involved in varying a rate, and represent the views of those whom you would be consulting by the method which you propose. So that all that you would do by that means which you suggest would be to obtain, perhaps, a fuller expression of the feeling of the trade on the Board, if that is what you are meaning.

11,965. And save time?—That might save time; but I do not know exactly by what machinery you would do that other than by the present machinery, because, for example, it is well known practically to all the employers in the trade, inasmuch as the proposed variation is to be initiated, that that proposal is to be made, and they therefore get together and consider upon what terms they are to propose the variation, how much it is to be, where they are to stop and what they are to fight for; so that to that extent before the Board meeting at which the variation is to be proposed, the employers are very well aware of the state of feeling in the trade.

11,966. I had rather gathered that a good deal of delay has arisen after an arrangement has been come to by the Board, and I wondered whether it was necessary to take up time asking for objections when they, at least, were aware that an arrangement was going to be made?—Yes, I could understand that. I do not know that that difficulty has arisen in my case.

11,967. *Chairman*: Then you propose that where a rate has been arrived at after contention, and possibly by the vote of the Appointed Members, the Board might be authorised to recommend that the period for objections be one month?—Be longer, yes. I think that gives an opportunity for the various views, which must be implied where there is a division of opinion on the Board, being fully expressed to the Minister and to the Board before

the rate proposed is finally fixed. I think that would be useful.

11,968. *Sir Arthur Pease*: But would that mean that when they wanted to stop a rate coming into force they would object instead of settling?—They would object, of course, but then the Board would be able to consider the objections on their merits, as we always do.

11,969. I have in mind an instance where a case has to go to arbitration by agreement. Very often the sides agree, or practically agree, weeks before, but one side or the other hangs back till the day comes when they can arbitrate upon it?—Yes.

11,970. Would not that sort of thing happen? Would it prevent the sides coming to an agreement, because they would disagree so as to get the month's notice?—I do not think that that would actually take place. The matter is considered on its merits, and one could easily discover in the course of discussion if there were any opinions which they were holding in reserve, or if they were adopting some tactical move. One can generally discover that in conversation between the two sides separately.

11,971. It does take place in organised trades?—I know it does.

11,972. *Chairman*: Then you propose that in no case should more than two months elapse between the proposal and the coming into operation of the rate?—Yes. I put it in the negative form, because if we could possibly have the rate fixed in less than two months it would be an advantage. The shorter the time the better both for the original proposal and for varying.

11,973. You think that an alteration in a proposal, which is agreed by both sides, can be accepted without further notice?—You are referring to item (d)? Yes. That is coming up time after time in connection with my Boards; after the notice of proposal has come up for re-discussion, and the time has arrived for fixing it, we have thought of or have actually proposed a certain slight alteration, or what seemed to us slight, or on some occasions a considerable alteration is suggested, and we have been held up by the thought that if we did this the Minister would not confirm it, and we should require a new notice. That has been a source of irritation to the members of the Board.

11,974. You would avoid the fresh notice and the fresh delay by authorising the Minister to consent if the Board consents?—If the Board is quite agreed, because as a rule it might have been that they had changed their mind in the interval; they might have discovered by talking with one another, on their respective sides, that this would be a useful change even though it is a serious change; and I would leave it to them and let them take the responsibility.

11,975. When you speak of the Board being agreed, do you mean that they must be unanimous?—Yes, when this alteration to which I am referring under (d) is concerned.

11,976. Do you also mean it as regards the higher rates?—What I was thinking of under that head—

11,977. I understand that, but I wanted to supply an omission; I did not ask you at the time. You know what I mean by the higher rates?—Yes.

11,978. When you say that higher rates should be agreed on the Board, do you mean that the Board must be unanimous? That is to say, would you have one dissident authorised to stop a rate?—You mean one dissident representative—one member?

11,979. Yes.—The difficulty of answering that is that I have had no experience of such a situation. As a rule the people go by sides, and the two sides work together each as a block, and one individual very rarely or never asserts himself individually. It may be a misfortune, but that is as it has happened.

11,980. It is conceivable?—That one particular member should do so?

11,981. Yes?—I should not regard that as a sufficient justification for completely holding up the position.

11,982. I am taking this part of your statement rather more quickly. As regards notice, you point

8 February, 1922.]

Professor J. 'B. BAILLIE, C.B.E.

[Continued.]

out that there is great difficulty about having notices fixed up outside a large works, and you suggest that they might be posted up inside each workroom?—Yes. I realise that that might involve a little trouble and expense, but it seems to me worth while, because the main point of the notice, it seems to me, is to bring the rates under the observation of those directly concerned, and that should be effective if it is to be satisfactory, otherwise you cannot expect the workpeople to know when the rates are being paid, or what the rates are.

11,983. *Dame Adelaide Anderson*: It would mean extra trouble in printing separate notices for each department, I suppose?—I should imagine it would.

11,984. You would not know the precise quantity needed so easily?—There might be difficulties such as these, but I have no doubt that they could be overcome, and in any case they ought to be overcome in the interests of the workpeople. They are concerned with these rates, and unless they know what the rates are, it seems to me that it is not fair to them.

11,985. The blocking at the entrance would hinder the work of the factory if everyone tried to read them?—Yes, if everyone did that.

11,986. *Sir Arthur Pease*: But ought you not to go further than that: is it not practically impossible to read those notices when they are stuck up on the wall?—I agree that that is so in many cases.

11,987. There ought to be some sort of pamphlet which they could tear off?—I quite agree. That is what I have suggested.

11,988. I do not see how anybody could read those notices if they were stuck up on a wall.—Yes, I agree.

Chairman: Your next suggestion, I see, is that copies of them should be on sale at Labour Exchanges?

11,989. *Mrs. Lyttelton*: But you think that they ought to pay for them?—Yes, to cover the paper. After all they are concerned, and it would not cost more than 1d. or 2d., which is enough to cover the paper.

11,990. *Sir Arthur Pease*: You want to prevent waste of them, too?—Yes, certainly; and if the rate is an advantage to them, why should they not pay for the copies?

11,991. *Dame Adelaide Anderson*: You mean just the cost of the paper?—Yes.

11,992. *Chairman*: As regards the usefulness of Appointed Members, I have myself nothing to ask. With regard to having three Appointed Members, you suggest that a Chairman might prove sufficient?—Yes.

11,993. Does that mean the Chairman only?—Yes, the Chairman only. Of course there would be a Vice-Chairman in reserve, as I suggest, so that in case the Chairman is not able to appear on a particular date the Vice-Chairman could be called upon to take his place; and I see no reason why in all circumstances three should be summoned.

11,994. Some Chairmen have told us that they feel happier if they have two Appointed Members with them?—I feel unhappy unless when I am alone I prefer to be alone because I know my own mind, but I do not always know the minds of my colleagues.

11,995. *Sir Arthur Pease*: Is a Board properly constituted if it has three Appointed Members, and one is not there?—Quite; it is a majority of members that constitutes a Board—a certain proportion fixed by the Act.

11,996. *Mr. Pugh*: It places a good deal of responsibility upon the Chairman if he sits by himself, does it not?—I much prefer to be quite clear as to the issue and see my way through. I have been used to it in previous experience that I have had, and I seem to grasp the situation better when I am not troubled by considering how this will affect other people directly concerned with the position—I mean my colleagues beside me.

11,997. I was rather thinking of the difference between a Trade Board and a Wages Board, where a chairman does not have to give a vote or a decision. On the Trade Board you have to do that?—Yes.

11,998. You still adhere to the idea of the single Appointed Member, even although he has to accept the responsibility of giving a decision?—Yes, I think so. That would be my own feeling in the matter. I do not say in all cases. I mean there are certain trades where it would perhaps be useful owing perhaps to the complicated nature of the trade, or for subsidiary circumstances it might be, to have someone to talk with; but stating it quite generally I should much prefer for my own part to be alone.

11,999. *Chairman*: Then you think that the Minister should keep the choice of Appointed Members in his own hands. When the time comes for re-nomination of members, he might see the Chairman of the Board and ascertain his views?—I think that would be useful, because he has no means of finding out how the individuals on the Board are actually working—whether they are really assisting the Board or hindering it. He has certain power of suspending or removing a certain member on the ground that he is incapable, and so far as I can make out he has no machinery for finding out whether any member is incapable.

12,000. It is not really removing, it is not re-appointing?—Not reappointing.

12,001. Then as regards rates for juveniles, you give us your experience. Sometimes they are graduated by age and sometimes by experience, I gather?—That is so, and a Board can choose which of these methods of distinction between juveniles it care to adopt.

12,002. It depends really upon the history of the trade and the custom of the trade?—Yes.

12,003. *Mr. Pugh*: That is to say that there should not be that difficulty, say, in the dressmaking trades which has been represented to this Committee, where it is a case of learners coming in over the age, say, of 16 years? The Boards have power to fix rates which are not necessarily on an age basis?—Quite, but they can if they wish to do so. It may be more difficult to adopt another basis; the most obvious way no doubt is the age basis; but it is not necessarily the fairest way. However, it is for the Board to settle.

12,004. And the Board can settle?—The Board can settle how it pleases. The adoption of the age basis, for example, in jute and in flax was largely due to the way in which increases were given by Arbitration Courts during the war. Prior to the war the general method by which wages were fixed was by the length of experience; a girl of 15, let us say, would probably get the same wage as a woman of 20 if she were equally skilled, but wage advances were given during the war on an age basis, and it seemed to the Board, wisely or unwisely, that that should be the basis upon which the rates should be fixed by the Board when it was set up, namely, age. I do not say that that appealed to all the members of the Board, but that is the way in which the Board actually did decide. There has been a certain amount of regret since, and that regret has been expressed by various members of the Board on the workers' side and on the employers' side. The opinion has been expressed that that was altogether a wrong basis to adopt in such a trade, and that it should have been experience and not age. It is just possible that they may revert to that and re-cast all the rates in the light of that other principle which formerly was the custom of the trade; but that is the history of their adoption.

12,005. *Sir Arthur Pease*: Does it make any difference to a piece rate?—In what sense?

12,006. I mean a girl of 15 if she did as much work on piece as a woman of 25 would get the same rate?—That is so in the case of piece rates; at least that is generally so; but in certain cases you will find a piece rate worked out for juveniles below 18 and a piece rate worked out for adults above 18, but in general it is true to say that the piece rate is the same all over, whether it is for a person over 18 or for a person under 18.

12,007. Would the work which is done by a juvenile be different from the other?—No, and in

8 February, 1922.]

Professor J. B. BAILLIE, C.B.E.

[Continued.]

some cases the juvenile will earn more than the older person, on certain classes of work.

12,008. Are not certain classes of work reserved for juveniles to deal with?—In some cases that is so, but in other cases no, they do the same sort of work.

12,009. *Chairman*: As regards the personal relations between the two sides, you say that the Trade Boards have had a good effect?—That is my opinion. I do not say that it would be corroborated by everybody on the Boards with which I am concerned, but on the whole that is the impression I have gathered from the working of the Boards, and in the case of one Board I have in mind it is emphatically true to say that it has had an admirable effect. I think both sides would recognise that. But the opinion of the two sides on this particular point has rather altered with the history of the Board. To begin with, for example, on one of the Boards I am thinking of the relations between the two sides were anything but cordial; then they became extremely pleasant to one another and worked together, and they had nothing but good to say of the Trade Board. Then a time of bad trade set in, and they got apart again and began to fight with one another, and some of them have nothing but bad to say of the Trade Board. That is what one might expect; but speaking generally, and taking the working of the Boards as a whole, that is how I should express it: it does do good, and the two sides understand one another in a way in which I do not think they could understand one another so successfully by any other means, as far as I can see.

12,010. On the other hand you say that there is some danger that the effect of the Boards may be to prejudice the personal relations between employer and employed?—Yes, I thought it well to refer to that. As a matter of fact, I had a conversation with one employer a short time ago on the matter and he says that there is not much fear of the Trade Boards interfering with personal relations between themselves and their employees. I was very glad to hear that, because I had heard the contrary view expressed on other occasions, so that I thought it necessary to call attention to it.

12,011. *Mr. Pugh*: You would hardly expect to find any difference in that respect between the machinery of collective bargaining so far as Trade Board trades are concerned and what you would find in similar circumstances in other industries?—No, I should not think so.

12,012. *Sir Arthur Pease*: Where there is organised bargaining there is very often the greatest difference between the feelings between one employer and his men and the feelings between another employer and his men in the same industry?—That is quite true.

12,013. And you think that condition will prevail with regard to Trade Boards?—Yes, I think so. As long as it is worked properly and a proper spirit develops between the two sides, as one hopes it will in days to come, I do not see that that need interfere at all with the good relations between an employer and his workpeople; but it will depend, of course, upon how it is worked. I can understand that at present in certain cases employers may feel so embittered against the Boards that they may turn their bitterness against the Boards into hostility against the workpeople who support the Boards; but I think that is hypothetical. I should like to see how far that would turn out to be the fact.

12,014. *Dame Adelaide Anderson*: With the Joint Industrial Council method the organisation is completed by the Works Committee or the Works Council?—Yes.

12,015. It would be purely voluntary in connection with a Trade Board?—A Works Committee?

12,016. Yes.—It would be altogether outside the scope of the Trade Board.

12,017. But there it is in the Joint Industrial Council idea; that is part of the whole machinery?—Perfectly. There is no reason why that machinery should not exist inside a works although the trade is under a Trade Board.

12,018. But now they do exist, do they not?—It is quite possible. I have no direct knowledge upon it, but it is quite possible.

12,019. You have no direct knowledge of them nor of their influence?—Not at present.

12,020. *Chairman*: Then you suggest that the power of Trade Boards might be extended so as to include the power to investigate industrial disputes and to act as arbitrators?—Yes, in certain cases. I thought it was worth while suggesting that to the Committee, because it seemed to me that that would put the coping stone on the work of the Trade Board; it would round off in a useful way their functions if they had the power to settle, within the bounds of the Trade Board, any disputes that arise.

12,021. In what way would you suggest that they should intervene?—For example a dispute may arise at a given works between the employer and his employees, or in a given district, over rates of pay, over an advance which might be asked, or over some difficulties in connection with the rates actually fixed Under the Act at present there is no penalty attached to the workpeople; they can strike if they like and you cannot get at them. The employer is punished all the time; the workpeople are not. In such a case it is highly desirable that you should have some sort of agency which, in the name of the Trade Boards, would say to your disputants: "Now we must not allow this to go on. You are under our Trade Board. We want to see what the facts are and to know the facts of this case, and we cannot allow you to dispute while you are under the general survey and scope of this Board. We are therefore going to institute an inquiry to see what the facts are, and we will report to the Board and try to settle it by the Board." That is how I should proceed.

12,022. Do you propose that a strike should be made illegal pending investigation by the Board?—I should give all the powers to the Board in such circumstances as are at present covered by the Industrial Courts Act.

12,023. *Mr. Pugh*: Are you not just asking for similar powers to what are exercised by Wages Boards themselves in ordinary industry?—Do they exercise these powers in ordinary industry?

12,024. I was asking whether what you were trying to get for Trade Boards was similar powers to those which are exercised voluntarily by wages boards in other industries?—That was mainly what I had in view. What powers you would give regarding strikes seem to be a detail. I did not go into that on its merits.

12,025. All questions of dispute are referred to the Board. It does not prevent strikes. I mean it does not do away with the power to strike or lock-out, but the Board is the machinery of the Trade for settling disputes?—Yes, that is it.

12,026. You want a similar thing here?—Yes, I want similar power.

12,027. *Mr. Layton*: Would you limit its jurisdiction to disputes arising out of questions dealt with by the Board?—All disputes arising in connection with the trade covered by the Trade Board.

12,028. That might be much wider, of course?—Much wider. It would not be confined to wages; it might concern conditions. There is no reason why it should not. It seems to me that it would be an advantage to have all these matters under the complete control of the Trade Board so as to make it really the legislative and governing body in the trade. That is what I have in mind, and I think that is involved in the principle of the Trade Boards Acts.

12,029. *Dame Adelaide Anderson*: Would you take into account the Factory Acts, which lay down conditions?—That is another matter altogether, it seems to me.

12,030. You are not thinking of conditions of safety and health, or any of those things?—I would not cover anything covered by another Act, of course.

12,031. What conditions have you in view besides wages, health, safety, and so on?—Hours of employment.

8 February, 1922.]

Professor J. B. BAILEY, C.B.E.

[Continued.]

12,032. Hours are under the Factory Act.—Times at which people come to work; whether a person is slack; all sorts of things might arise.

12,033. *Sir Arthur Pease*: But you cannot force any one man or any body of men to work if they do not want to?—In general, I agree.

12,034. And you cannot force an employer to keep his works open if he does not want to?—I agree.

12,035. You could not get any compulsory sanction for such decisions, could you?—What compulsory sanction have you at present under similar conditions?

12,036. Both strike and lock-out.—Perfectly. If you care to suggest that this machinery would not completely allay trouble, I would agree, but it is a question of trying to prevent it to the very last moment, and I think machinery such as this would assist in that direction. In the same way, by no means will you prevent war, but you can delay it indefinitely; and by such machinery as this I think you would in many cases, because you would get a Committee, say, of the Board invested with power to examine into the situation and to report. That in itself brings an impartial mind to bear upon the situation, and that has a remarkable effect in calming people's feelings and getting them to understand what exactly is the point of view of the respective sides. That is of very great assistance in allaying a dispute. That is all I mean; but if you say that you shall have absolute power to compel an employer to open his works, and to compel the workpeople to go to work, of course that is out of the question.

12,037. *Mr. Poulton*: You said that an employer was penalised all the time in wages disputes. In what way is he penalised?—He is the only person to whom penalties are attached by the Act.

12,038. I am asking about this widening of the powers. In what way is he penalised?—Do you mean under the present Acts?

12,039. No, under this suggestion of yours, you say workpeople can come out on strike as they like, but the employer is penalised all the time?—He is penalised under the Act, and there is no penalty attaching to anything that the workpeople may do. I suggest that some machinery should be adopted so as to bring the two sides together in case of dispute. In the case of a dispute arising, without some such machinery as this the employer might be compelled to pay a rate or compelled to do this or that, and he might feel that he was not being fairly treated; but give the Board power to investigate the matter and examine into the case, and see what the situation is, and report, and try to allay the dispute, and I think you are dealing more fairly with the two sides. That is all I have in mind.

12,040. *Sir Arthur Pease*: To act as conciliators rather than arbitrators?—They might agree that they should suggest arbitrators, or the Board might agree to act as conciliators. I carefully considered the question referred to by Mr. Poulton that one side alone is under a penalty, and why should they be penalised alone; but I did not see any way how to attach penalties to the other side. I may remark, in passing, that I do think that it has been not altogether fortunate that one side has come to the Board knowing that they are to take all the blame and all the penalties, and the other side is not to have any penalties attaching at all. The employers feel that they come there more or less in the position of an accused, and their sense of justice is being condemned by Act of Parliament, and so on. That may or may not be true of what one might call sweated industries; that is not for me to say; but with a good many industries brought under the survey of Trade Boards I do not think it can be regarded as a fair statement of their case. I see no remedy for that situation. I see that the penalties must be primarily attached to the employers, and it is very difficult to attach any penalties to the other side, and therefore I suggest this means by which in cases where disputes do arise and difficulties arise out of the working of the Acts or in connection with the trade coming under the

Acts you would find this extension of the powers of the Board very serviceable.

12,041. *Mr. Pugh*: It would make them really Conciliation Boards as well as Trade Boards?—Yes, it would make them Conciliation Boards, and, if necessary, Arbitration Boards if the two sides agree. I make the last remark because in a certain case it has been suggested that where difficulties arise between employer and employed the Chairman of the Board should act as arbitrator. It has been suggested; but subject to that I think probably conciliation would be the main function performed by the Board.

12,042. *Sir Arthur Pease*: Then you would have three stages really: (one) the lowest or compulsory rate—a general compulsory rate?—That is right.

12,043. (Two), the piece rates and the higher rates, which would be compulsory only if the two sides agreed?—That is right.

12,044. And (three) rates settled by arbitration which there would be no compulsory powers to enforce on either side?—I did not know where you were coming out. In the last case, of course, the case of arbitration, the arbitrators—the means of conciliation—could not possibly establish a rate as the Trade Board rate unless the Trade Board fixed the rate fixed by the conciliator or arbitrator. That is quite obvious. But if, for example, a dispute did arise where the question was one of wages higher than the wages already fixed, and a rate was fixed by the arbitrator, I suppose you would regard it just as an arbitration rate unless the Board sanctioned it as a specific rate, which would be very unlikely. I have not thought of that point at all to which you are referring as establishing another rate by this means. I do not think that would be so.

12,045. *Mr. Poulton*: The question of its being carried out would depend upon the organisation of the two sides?—Quite, and that would be quite sufficient, because you would have the whole organisation brought to bear in a local dispute. But, after all, the Board has a certain amount of authority, and it would have growing authority, the better the relations between the two sides; and the chances are that that process would be sufficient for securing that any decision arrived at by the arbitrator or by the Board acting as a conciliator would be carried out.

12,046. They would be acting in a capacity entirely different from a Trade Board, though, would they not?—Perfectly. This is a function which I should suggest being assigned to the Trade Board not in the place of any other function, not as a rate-fixing power, and in no way taking over the functions of the Board in the way in which we have so far suggested, but as something over and above and as supplemental, and on the whole, I think, necessary to complete the work of Trade Boards.

12,047. *Chairman*: You really would give them the power of the Industrial Court?—The Industrial Courts Act in their particular trade. Perhaps it might be better if, instead of handing over all the powers I have suggested to each Trade Board, you had a Central Arbitration Tribunal for trades coming under the Trade Boards alone; but you might say that that is at present taken over by the Industrial Courts. That may or may not be.

12,048. *Mr. Pugh*: Would you bring in the super Trade Board for this?—No, I have no intention of that at all.

12,049. *Chairman*: I think your last suggestion is that the Acts should be consolidated?—That seems to me most important. That was mentioned during the Debate on the Act in June, 1918, by one Member of the House of Commons; I have forgotten his name; and I am surprised that more attention was not given to it. It certainly does seem to me very important.

12,050. Certainly, if you get a third Act you must consolidate the three?—Yes, but apart from that I should have thought it would have been better from the first to have consolidated the other two Acts, the amending Act and the principal Act.

Chairman: We are very much obliged to you for coming here.

(The Witness withdrew.)

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

Mr. J. J. MALLON and Miss M. J. SYMONS called and examined.

The Witnesses handed in the following statement as their evidence-in-chief:—

The following summary is submitted on behalf of the Trade Boards Advisory Council set up under the General Council of Trade Union Congress. This Advisory Council includes all the Trade Unions represented on Trade Boards, and this summary embodies their conclusions and proposals.

I.—RETENTION OF MAIN POWERS CONFERRED UPON TRADE BOARDS UNDER THE 1909 AND THE 1918 ACTS.

The main criticism urged against the Trade Board system would appear to be that the Boards have in some way exceeded the powers conferred upon them, or at least that in the use of these powers they have gone beyond the intention of the Acts. The Trade Boards Advisory Council believe that such criticism is due to a misconception of the powers actually possessed by the Boards under the 1909 Act, and certainly to a misconception as to the intention of both Acts.

As regards the 1909 Trade Boards Act, it will, of course, be clear to the Committee that with the exception of the power to fix guaranteed minimum time-rates for pieceworkers, piecework basis time-rates, and overtime rates, the powers conferred upon the Boards by Section 3 of the 1918 Act are the same as those conferred upon the Trade Boards by Section 4 of the 1909 Act, and further, that the power to fix detailed rates for special classes of workers, for instance, was actually exercised by the first Trade Board to be set up, namely, the Chain Trade Board, which fixed an elaborate scale of rates varying according to the size of the chain made.

Further, it will be within the knowledge of the Committee from the reports of debates in the House of Commons on the 1918 Act and from the pronouncements of Cabinet Ministers at that time, that it was contemplated that Trade Boards should not only protect the lowest paid worker from sweating, but should provide machinery in unorganised trades for carrying out the work performed by Joint Industrial Councils in organised trades. In the words of the Second Report of the Whitley Committee:—

“The level of organisation in industries in Group C is such as to make the scheme we have proposed for national or district industrial councils inapplicable. To these industries the machinery of the Trade Boards Act might well be applied, pending the development of such degree of organisation as would render feasible the establishment of a national council or district councils.”

The Trade Boards Advisory Council are convinced that it is essential that all the powers conferred upon the Trade Boards under both Acts should be retained, and particularly desire to refer the Committee to the following points:—

A.—Method of Application of the Acts.

It may be assumed that there is general agreement that the method of the 1909 Act by which every provisional order had to be submitted to Parliament for confirmation is cumbersome and a waste of Parliamentary time. It has, however, been suggested in certain quarters that the quicker method of proceeding by means of special order under the 1918 Act has led to the establishment of Trade Boards without due consideration, and that a statutory enquiry should be held in every case before the setting up of a new Trade Board. In this connection we would refer the Committee to the history of the formation of Boards under the 1918 Act. It will then be found that the summary of negotiations in the catering trade, already submitted to the Committee, is not unrepresentative of the methods which have been adopted. In every case a number of preliminary conferences of persons interested in the trade have been held, and it is not until the ground has been thoroughly explored by this means, and by independent investigation into wages and conditions by

officers of the Ministry of Labour that the draft definition has been circulated. When at a later stage the Provisional Order is issued, it is then open to the trade to send in objections and to exercise their right to request a statutory enquiry under the provisions of the First Schedule of the 1918 Act.

The Trade Boards Advisory Council consider that the fact that no request for such a statutory enquiry has in fact been made under the 1918 Act is in itself sufficient evidence that there is no need to institute a practice of preliminary statutory enquiries in every case, since it is feared that such a procedure, apart from its cost would still further delay necessary protection of the workers.

B.—Trades to which the Act can be applied.

The Council contend that nothing would be gained by a return to the wording of Section 1 (2) of the 1909 Act, and would strongly oppose any amendment in the 1918 Act which would have the effect of limiting the operation of Trade Boards. By a careful consideration of conditions prevailing in trades to which the 1918 Act was applied, at the time of its application, particulars of which have already been fairly fully submitted to the Committee, the Council arrives at the conclusion that it is exceedingly doubtful whether the Act has in fact been applied to any trade to which it could not have been applied under the conditions of the 1909 Act, but they also maintain that the wording of Section 1 (2) of the 1909 Act was so ambiguous that in practice it is unlikely that it would have secured to these workers the protection to which they were entitled. They consider that the emphasis which is laid on the lack of “adequate machinery for the effective regulation of wages throughout the trade” in Section 1 (2) of the 1918 Act is proper, since these conditions admit of comparatively easy proof, and where they exist invariably involve low wages at least in sections of the trade.

C.—Powers of Trade Boards under Section 3 of the 1918 Act.

(1) This Section of the 1918 Act has led to considerable controversy. It has already been established that the permissive powers to fix “minimum rates of wages for time-work” “general minimum rates of wages for piece-work,” so as to apply universally to the trade or so as they apply to any special process in the work of the trade or to any special classes of workers in the trade, or to any special area, are identical in the 1909 and the 1918 Acts, and were in fact exercised under the 1909 Act.

As regards the increased powers conferred under the 1918 Act to fix a guaranteed time-rate for pieceworkers, overtime-rates, or piecework basis time-rates, it does not appear that the exercise of these powers has led to any serious criticism. These increased powers were undoubtedly conferred in order to enable Trade Boards to do what had become the almost universal practice on all trades.

A great deal of experience in dealing more particularly with wages of women workers had been gained during the war and embodied in the provisions of the Statutory Rules and Orders issued under the Munitions of War Acts. It was contemplated that a number of trades which had been covered by such Orders during the war would eventually come under the Trade Boards Acts, and the Trade Boards would not have been in a position to deal adequately with such trades under the more restricted powers of the 1909 Act.

As regards the power to fix overtime rates in particular, it would appear that the basis of the normal working week, which is inherent in the Trade Board system would be seriously endangered unless the Boards possessed the power to fix additional rates for hours worked in excess of the normal working week.

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

(2) *Reasons against limiting the number of rates which a Board may fix.*—Certain criticism against Trade Boards has centred round the power of the Boards to fix more than one statutory general minimum time-rate. In considering the value of such criticism, it is important to note that the Boards which have departed furthest from such an attitude such as the Boot and Shoe Repairing Trade Board and the Brush and Broom Trade Board, are unanimous in expressing the view that their Board could not meet the conditions of their respective trades by merely fixing one general minimum time-rate.

The volume of evidence against these rates for special classes of workers is small and in the case of certain employers who have spoken against them such as Mr. Jackson of the National Union of Manufacturers, it should be pointed out that on the Stamped or Dressed Metalwares Trade Board Mr. Jackson was himself a party to proposing special rates for classes of both male and female workers by agreement.

In the course of evidence, the following methods of dealing with this question have been suggested:—

- (a) That only one time-rate should be dealt with by the Board;
- (b) That rates other than the one time-rate might be fixed, but only where agreement between the sides is reached without the votes of the Appointed Members;
- (c) That even where such rates are arrived at by agreement their operation should not be statutory.

The Trade Boards Advisory Council consider that any of the three suggestions would cripple the usefulness of the Trade Boards, and they contend that in promoting them witnesses have had in mind what they conceive to be the position of a particular trade, rather than the conditions existing in Trade Board trades as a whole. In certain trades the nature of the work performed is very much at the same level throughout. In other industries special classes of workers happen to be able to protect themselves and where these conditions operate the Boards have not availed themselves of the power to fix special rates. In other trades, however, one or other of the following conditions has operated:—

- (a) Certain classes of workers may have been working before the operation of the Board under such sweated conditions that even a low general minimum time-rate would have forced them out of existence, e.g., homeworkers in many trades have required special rates.
- (b) In some trades, certain employers are found throughout the country paying such a low level of wages that an exceptionally low general minimum time-rate has to be fixed, e.g., on the Sack and Bag Trade Board, which represents a case in point, it was possible by fixing a special rate for special classes of workers to protect a certain proportion of the workers more adequately than had been possible by the low general minimum time-rate.
- (c) In certain trades which employ a relatively small number of unskilled labourers, and where the whole of the trade for which the Board is really set up consists of skilled workers, the lowest rate fixed would probably be entirely inappropriate to the great majority of workers in the trade.
- (d) In other cases specially skilled workers or workers engaged on specially arduous work, such as women on men's work in the Sugar Confectionery Trade, and workers on special machines in the Tin Box Trade, can only be protected by special rates.

In this connection it should also be noted that casual workers in certain trades need special protection, as, for instance, casual workers under the Laundry Trade Board engaged for the purpose of getting out ships' work at the docks.

It would be impossible to mention in detail the various cases that have occurred and may occur, but in considering the argument that special classes of workers are able to protect themselves, it should always be remembered that many of the worst cases of sweating have occurred among workers engaged on work of a special nature, such as skilled embroiderers, and brick makers, while in assuming that such cases can be dealt with by organisation, the very basis on which the Trade Boards Act is applied to trades is overlooked.

(3) *Learners.*—In dealing with this question, the importance of the powers of a Trade Board with regard to learners cannot be overlooked. While there may be differences of opinion as to the expediency of the methods adopted by Trade Boards in dealing with this problem, it would no doubt be admitted that wise legislation in this respect is the most constructive piece of work which can be done by a Trade Board, since it affects the whole future of the trade. In certain trades, such as the Tailoring trade, on which detailed evidence has been submitted to the Committee, the Board is faced with a very complicated problem, since while apprenticeship may be desirable in certain skilled branches of the trade, other branches which are quickly learnt may call for a scale of learners' rates, and yet other sections may be more properly dealt with by a system of juvenile rates based on age.

On this matter the Council submit that the interest and ingenuity of Trade Boards will be seriously endangered if their powers are limited in any way.

In considering the criticisms which have been made as regards the action of various Trade Boards in dealing with the learners, the Committee will no doubt bear in mind that this criticism arises mainly in the case of new Boards which were faced with peculiar problems after the war. The conditions of employment in many trades had been abnormal owing to war conditions and in dealing with juvenile labour the Trade Boards had to bear in mind two general points:—

- (a) The importance of not fixing rates so high that children would not in fact be taught the trade;
- (b) The importance of not fixing rates so low that employment of children at the expense of adults would be encouraged in occupations which were already overstocked and in which many children had no reasonable hope of securing permanent employment.

On the second suggestion that Appointed Members should not be permitted to vote on any rates above the lowest rate fixed, it is contended that such an amendment is impracticable and unnecessary. The point at which the experience of Appointed Members ceases to be sufficient to enable them to vote on rates is not a fixed one, since it must vary according to the particular circumstances of each case.

In many cases the second or third set of rates on which Appointed Members may be asked to vote may all be at a comparatively low level. In other cases, the actual point of dispute between the two parties may not be a technical one, but it may involve a question on which the Appointed Members are as competent to express an opinion as on any other. It might also be argued that on these relatively higher rates the duty of the Appointed Members to represent the point of view of the consumer becomes of greater importance.

As regards the third suggestion that these relatively high rates, however they may be arrived at, should not be legally enforceable, it is strongly contended that such a provision, if applied to a Trade Board trade would render the work of the Board useless. While amicable agreements can be arrived at by the two sides of Trade Boards, who know that the rates fixed will be observed by the trade as a whole, in the majority, if not in all cases, they would no longer be arrived at if the employers concerned could be subjected to competition by firms who did not choose to comply with the agreement. This very difficulty has led to the abolition of Joint Industrial Councils and Interim Reconstruction Committees in many trades, and to the substitution of a Trade Board in trades such as the Boot and Floor Polish, and,

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

judging from experience, the Council have no doubt that the work of the Trade Boards would share the same fate if statutory protection were removed from any rates.

It has been suggested that in exercising and demanding powers to regulate wages above the lowest minimum, Trade Boards are in a preferential position as compared with the large organised trades of the country. The obvious answer to such a contention is that in so far as a trade is completely and adequately organised for the purpose of regulating wages it possesses its own machinery and neither needs nor desires the alternative machinery of the Trade Boards Acts. If the rates of wages in such trades throughout a comparatively long period are compared with the rates of wages in Trade Board trades, it will be found that the level of wages in the organised trades is considerably higher. The fact that at any given time, such as during the present abnormal trade depression, rates lower than those generally fixed by Trade Boards may be discovered in certain highly organised industries is no argument against the Trade Board system, since one would naturally expect a steadier level to be maintained in an industry in which wages have been comparatively low over a long period.

II.—ALTERATION PROPOSED IN THE EXISTING SYSTEM.

A. The Trade Boards Advisory Council propose that the Trade Boards Acts should be amended so as to give the Minister power to include several trades within one Board. It has been suggested in several cases, such as the distributive trades, the Birmingham metal trades, the clothing trades, the jute and kindred trade, that grouping would diminish the number of difficulties that now arise on scope, and would also overcome certain objections from employers who complain of the complexity of a position in which they are covered by a number of Boards.

If the necessary amendment in the Acts is made, the Trade Boards Advisory Council suggest on procedure that if the Minister is unable to accept the recommendation of any Board on the question of grouping, or if two Boards disagree, the matter should be referred to the Tribunal, which will be dealt with in a later section of this evidence.

B. The Composition of Trade Boards.

(1) *Chairman and Appointed Members.*—The Trade Boards Advisory Council suggest that with regard to the Chairman, representative bodies of employers and workers should be asked to prepare a panel of persons possessing the necessary standing and experience, to be submitted to the Minister of Labour, and that the Minister should appoint from this panel after consultation with both sides of the Trade Board.

As regards the two Appointed Members other than the Chairman, the Council propose that the same representative bodies of employers and workers should be asked to prepare two panels of employers' and workers' representatives respectively, and that after consultation with the particular Trade Board concerned the Minister should appoint one assessor from each panel to act as the Chairman.

It should be clearly understood that the Council propose that all three persons, when selected, should act permanently on the particular Board to which they are appointed, since they cannot see that any useful purpose would be served by a succession of Appointed Members who would be unable to maintain any continuity in policy.

The Council consider that their proposal, if adopted, would go a long way to remove the objections to the Appointed Members which have been made from both sides. They would remind the Committee that this system was adopted in the constitution of the Munitions Tribunal, set up under the Munitions of War Acts, and that it worked very successfully on the whole. It was not found that the two assessors always disagreed, and thus cancelled out, and on the other hand their experience and knowledge contributed to wise and acceptable decisions.

As to the various suggestions that have been made for the complete abolition of the Appointed Members and the reference of a difference between the sides to some Arbitration Tribunal, the Council consider

that such an alteration would cut right across the principle of conciliation underlying the Trade Boards, and it would greatly weaken the status of the Boards by constant reference to an outside body.

(2) *The Composition of the Trade Boards has been criticised by certain employers on the ground that—*

(a) An undue proportion of Trade Union officials are appointed to the Boards;

(b) Trade Unionists are represented on the Boards disproportionately to their numerical strength in the industry.

On the first point, while the Council are anxious that workers actually engaged in the trade should be adequately represented on the Boards, they maintain that it is in the interests of efficient working of a Trade Board that representative officials should be present on both sides. While officials would always be guided by the experience of the workers in a trade on technical points, these workers are, by the very nature of a Trade Board trade, inexperienced in negotiation. In practice it has been found that a very great deal of time is saved, and that better conclusions are arrived at if persons having some knowledge of Trade Board machinery and general negotiations are present on both sides. In their absence a great deal of time tends to be wasted, through misunderstandings, and if conclusions are reached because certain facts are overlooked owing to inexperience no good can result to either side in the long run from such decisions.

Further, on all Trade Boards, where a necessarily limited number of people legislate for very large numbers, it is important that the legislators should be representative in the sense that they can both collect the views of their respective sides and express them on the Board, and circulate information regarding the proceedings of the Trade Board to their respective constituents.

On the second point, that of undue representation of Trade Unionists, the Council would point out that where the Ministry of Labour have been unable to secure Trade Union representatives covering the whole area under a Trade Board, non-unionists have been appointed, but wherever any degree of organisation exists, they maintain that a trade unionist who only represents a small number of workers is more representative and therefore more useful on a Trade Board than a non-unionist who is necessarily only in a position to represent himself or herself.

C.—District Trade Committees and District Rates.

The Advisory Council do not desire to express any general view for or against District Trade Committees or District Rates, since they are of opinion that these matters should be left to the individual Boards. They suggest that no alteration in existing powers should be made on these matters with one exception—in the case of District Trade Committees, they feel that the power of a Trade Board to set up such Committees should be extended so as to enable them to be abolished if they are no longer desired. In their opinion the fact that once District Trade Committees are established a Board has no power to disband them is an anomaly in the Act, and might deter a Board from experimenting in the usefulness of such Committees.

No other alteration in the existing powers on this matter is desired by the Council, and they would be strongly opposed to any amendment which made the setting up of District Trade Committees or the fixing of differential rates for various districts compulsory, since such a practice may be advisable in certain cases and utterly unworkable in others.

D.—Provision of the Acts for Proposing, Fixing and Confirming Wages, &c.

(1) On the question of the period for objections the Council consider that the period of notice in the case of the first proposal of a new Board should be two months, as now. In such cases it is important that employers and workers should have time to familiarise themselves with the new machinery.

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

As regards any further proposal, however, or any variation in the rate fixed, the Council strongly recommend that the period should be shortened to one month.

(2) *Power to amend a Proposal without re-proposing.*—It has been suggested in various quarters that greater elasticity is necessary to enable the Boards to vary a proposal in accordance with the objections received without being obliged to re-propose. It is undoubtedly true that very few cases have occurred in which either side has pressed any point arising on the objections received so as to involve a re-proposal, in view of the very serious delay entailed in such a procedure.

If the period for objections were shortened to one month, as already suggested, the deterrent to a re-proposal would be less strong, but owing to the difficulties which have arisen on what constitutes a substantial alteration in a proposal, it might be advisable to amend the Acts so as to admit of variations at the fixing stage where such variations are arrived at by agreement on the Board.

(3) *Confirmation of Rates.*—The Council are of opinion that the procedure with regard to the confirmation of rates is of the utmost importance and requires urgent revision. Very great dissatisfaction has been caused by the delay which has occurred in many cases in the confirmation of rates by the Minister of Labour, and it appears necessary to safeguard the power of confirmation from any suspicion of political pressure. At the same time, the Council bear in mind both the Minister's responsibility to Parliament for the administration of the Acts, and the importance of doing nothing to weaken the status of the Boards.

After careful consideration they therefore propose that the powers of the Minister as regards the confirmation of the rates fixed by a Trade Board should be limited either to:—

- (a) Confirming the rates sent to him by the Trade Board; or
- (b) Referring them to the Industrial Court within a week.

For this purpose, the Council recommend that the Industrial Court should be strengthened by the addition of assessors chosen from panels of Trade Board representatives. The powers of the Industrial Court in this matter should be limited to either:—

- (a) Referring the rates to the Minister of Labour for immediate confirmation, or
- (b) Referring back the rates to the Trade Board concerned.

The Industrial Court should be obliged to arrive at its decision within a strictly limited time, and the Minister should act forthwith on the advice of the Court.

It is submitted that such a procedure, while retaining the responsibility of the Minister, would have the advantage of removing the onus of confirmation or reference back from the political sphere; at the same time it would not weaken the present status of the Trade Board by causing their decisions to be automatically re-discussed, and possibly re-fashioned, by an outside body and thus reducing the Boards to a Court of first instance.

E. Scope.

The present unsatisfactory position in which neither the Board nor the Minister has the final word in deciding questions of scope has received general attention and there is no doubt that disputes on this question and differences of opinion between the Boards and the Minister on the allied question of the definition of a Board have converted certain employers otherwise favourable to Trade Boards into opponents of the system.

The Advisory Council suggest that questions of scope should be first considered by the Trade Board concerned, who should tender their decision to the Minister of Labour. If the Minister is able to accept their view, his decision should be legally binding. If he is unable to accept it, or if allied Boards express

contradictory views, the matter should be referred to the Industrial Court, constituted as proposed above, whose decision should be final and legally binding.

F. Machinery of Enforcement.

Since the principle underlying the Trade Boards Acts is that the wages arrived at on any Board should be generally observed, the question of proper enforcement of Trade Boards rates is of vital importance. As regards the machinery of inspection, the Trade Boards Advisory Council desires to stress the recommendations of the Majority Report of the Trade Boards Administration Committee, and to urge that the Committee should secure their full acceptance. It is, however, generally admitted that the inspection staff has not grown in proportion to the increased number of Trade Boards, and the Council are bound to urge that the number of trained inspectors should be increased. The Council feel, however, that proper enforcement would be greatly facilitated if the workers and their representatives were in a position to play a more direct part in securing their statutory rights. The Trade Unions as such have at present no right to take proceedings against employers who evade the Acts, and though presumably this power could be added to Section 6 (2) of the 1918 Act, which now gives the Minister power to take civil proceedings, such an amendment would not in practice prove effective, owing to the severe financial strain it would impose on the Trade Unions.

The Council feel very strongly that some less expensive machinery is needed in the shape of a Court in which the worker or his representatives would be in a position to state the case and recover arrears of wages before persons more closely acquainted with technical and industrial questions than the magistrates. They suggest that some Court constituted on the lines of the Munitions Tribunals would be a good alternative to the County Court for this purpose. The direct representation of the workers by a Trade Union representative would reduce the cost, and make the proceedings less alarming to the ordinary worker, while the assessors chosen in the way in which the assessors of the Munitions Tribunals were chosen would be in a better position to arrive at wise decisions.

It is fully realised that the cost of such new machinery may arouse criticism at the present moment but as against this cost it should be remembered that it would reduce the need for increased inspectors by relieving them of a large number of cases and thus setting them free for routine inspection where the workers are unorganised. It is also possible to contemplate that such Courts, if set up, would be in a position to undertake other industrial work.

G. Slow Workers.

It has been contended that the provisions of Section 5 (5) of the 1918 Act with regard to workers affected by any infirmity or physical injury are too limited to enable the Board to deal with slow workers. The Advisory Council gave this matter careful consideration and while they are naturally anxious that workers should not be thrown out of employment owing to the operation of the Acts, they cannot find that unemployment has in fact been caused by the limitations of this Section. They would point out that in almost all trades, it is open to firms to place the workers referred to on piecework, so that—provided the piecework basis time-rate is correctly fixed—the employer has no further obligation to the "slow worker." Where this is not possible, they feel that the wording of Section 5 (6) has admitted of such wide interpretation that it has been possible to cover cases which require protection. It appears to them that some of the witnesses who have spoken in favour of widening the terms of this section had in mind the conditions of their own particular trade, which would make it possible for a committee of the Board to consider the case of slow workers adequately. The Council, must, however, bear in mind the condition of all Trade Board trades, and they are bound to submit to the Committees that in cases as the laundry

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

trade in which very large numbers of applications for permits are received, it would not be possible to deal with wide powers without endangering the basis of the Acts.

H. Power to Acquire Information as to Wages.

The Trade Boards Advisory Council consider that everything is to be gained by arriving at decisions on Trade Boards with full knowledge of all the facts, and they therefore urge that power should be acquired in the Acts to enable the Minister of Labour (before a Board has been set up) and the Trade Board itself, once formed, to require a return of wages paid in any firm or firms.

This would not only enable the Board to arrive at decisions on more sufficient data and thus greatly facilitate the work of the Appointed Members, but it would also enable the Boards to assist in the work of inspection in any area where evasion was thought to be taking place.

CONCLUSIONS.

In considering the Trade Board system as a whole, the Advisory Council submit that its utility has been abundantly proved not merely to the workers concerned, but to the trades concerned as a whole, and to the community. The Council consider that the recent attack on the system arises not from any serious defect in the main provisions of the Acts, but rather as a result of the abnormal trade depression of the present year.

In this connection they would draw the attention of the Committee to the Majority Report of the Trade Boards Administration Committee, in which representative employers, workers and Appointed Members expressed the following opinion:—

"That Trade Boards have been a potent means for securing and maintaining industrial harmony in the trades for which they have been established. It will be recalled that the establishment of Trade Boards in trades which were insufficiently organised to establish a Joint Industrial Council was recommended by the 'Whitley Committee' as a means of improving relations between employers and employed, and that the National Industrial Council of 1919 advocated the immediate establishment of Trade Boards in the less well organised trades. We consider that the almost entire absence of industrial unrest in trades covered by Trade Boards, even in the difficult periods during and after the war, of extreme and rapid fluctuations of money values, is a great tribute to the power of a Trade Board to settle rates of wages on a firm basis. It is significant that during the last few days both the Wholesale Mantle and Costume Trade Board (Great Britain) and the Dressmaking and Women's Light Clothing Trade Board (England and Wales) have, as a result of their first year's working, unanimously passed resolutions expressing their sense of the value of a Trade Board."

This opinion has been strengthened by resolutions passed unanimously on many Trade Boards, such as the following passed by the Ready-Made and Wholesale Bespoke Tailoring Trade Board on 27th April, 1921:—

"That in view of the attempts now being made to bring about the abolition of Trade Boards, the Members of the Board of whom the majority have had many years' experience of the working of Trade Boards place on record their opinion that the establishment of a Trade Board has been of considerable advantage to the Ready-Made and Wholesale Bespoke Section of the Tailoring Trade, notwithstanding certain administrative difficulties, towards the removal of which steps are now being taken: and that copies of this resolution be forwarded to the Minister of Labour and the Prime Minister."

The Council deplore the refusal of the Minister of Labour to accept the Majority Report of the Administration Committee in full, as they believe that by

adopting the proposals set out in that Report the Minister would have secured the full co-operation of employers and workers experienced in Trade Boards in working the Trade Boards Acts.

The Council feel bound to point out to the Committee that the main lines of attack pursued by witnesses opposed to the Trade Board system is an attack on any legal regulation of wages rather than mere hostility to certain detailed provisions contained in the Acts. From their knowledge of the conditions which have existed in trades now covered by the Acts, and which still exist in other trades in which protection has been delayed, the Council urge that any alteration in the Acts which makes a return to such conditions possible would be a national calamity.

They have tried to meet any criticisms based on a genuine grievance in the proposals embodied in this summary and in urging their acceptance upon the Committee, they desire to express the hope that the Committee will resist any attempt to make the present abnormal circumstances an excuse to weaken machinery which has stood the test of experience and has immense possibilities for good in the future.

12,051. *Chairman (to Mr. Mallon):* You are a member of a number of Trade Boards, I think?—*(Mr. Mallon):* Yes.

12,052. I do not know whether you have time to give a list of them?—At a guess there are 16, I think. That includes three Irish Boards.

12,053. They are the Brush and Broom Board, the Corset Board, the Dressmaking Board, the Fur Board, the Hat, Cap and Millinery Board, the Paper Bag Board, the Paper Box Board, the Ready-Made Tailoring Board, the Retail Bespoke Tailoring Board, the Shirt-Making Board, the Tin Box Board, and the Wholesale Mantle and Costume Board?—Yes, and three or four Irish Boards, I forget which.

12,054. *(To Miss Symons):* I think you sit on five Boards?—Yes. I was a member of seven, but I have resigned from two.

12,055. *(To Mr. Mallon):* May I take your summary first? This statement is put in on behalf of the Trade Boards Advisory Council?—Yes. Perhaps I might explain in a word what that Council is. It consists of representatives of all the Unions having to do with Trade Boards. A conjunction between those Unions became necessary in order that the policy of their representatives on the various Boards might to some extent be harmonised. The Trade Boards Advisory Council is the equivalent of the employers' Trade Boards Consultative Committee, and, as I say, it can claim to represent the views of all the Unions which have Trade Board interests.

12,056. It is appointed by the Trade Union Congress, is it not?—Yes.

12,057. I see that it is a body of some twenty members, or thereabouts?—Yes.

12,058. You deal with the question of the retention of the main powers conferred upon Trade Boards by the Acts, and you say that the main criticism urged against the Boards appears to be that they have exceeded their powers, or that they have used their powers beyond the intentions of the Acts?—Yes. On that and the subsequent paragraph I should like to put to the Committee that the power which has been perhaps the centre of criticism, the power to fix various rates, is one of the original powers conferred on the Board, and I would like further to say that that power was conferred very deliberately. I remember the discussions which took place at the Board of Trade with regard to the Act of 1909, and I remember the expression of Mr. Churchill's view (Mr. Churchill then being President of the Board) so far as he was concerned, and so far as the Board was concerned. There was a very deliberate and very clear view that Boards should not be unduly circumscribed in their powers, and therefore it was not at all accidentally, it was deliberately and of set purpose, that the Boards were given powers to fix rates of wages for special classes of workers in their trades. I should like further to point out that immediately, and without anybody objecting, that power was exercised. In the very first determination of the

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

Chain Trade Board you will find that four rates of wages were fixed for different sets of workers. On the Wholesale Tailoring Trade Board and the Paper Box Board, which were appointed, I think, in 1910, it is perfectly true that we did not immediately make use of that power, but that was not because we did not know that we had the power. As a matter of fact we discussed on both those Boards schemes of rates for various workers in the trades, as elaborate as the present scheme. It was only because the sides could not agree upon rates for various classes, and because at that point in the history of Trade Boards the Chairman did not feel that he ought to assist in a scheme of highly elaborate rates, that those schemes did not come into operation. The point which I want to make is that that power, and that they either exercised that power as in the case of the chain trade, or essayed to exercise it, as in the case of these other Boards. I might add that later on, under the Act of 1909, the Tin Box Trade Board certainly, and I think the Sugar Confectionery Board also, used their power to fix a second rate. In the case of the Tin Box Trade Board the circumstances were that young people were found to be employed on presses of a certain stubbornness and danger. It was thought that this work was so special that if it were done by young persons a special rate should be fixed to apply to it, and we therefore laid it down for those young persons that if they were employed upon this work they should get not the ordinary learners' rate, but the full adult rate. Those are cases in which, under the original Act, this power was actually exercised.

12,059. *Dame Adelaide Anderson*: At what date was that particular power press question dealt with?—On the Tin Box Board?

12,060. Yes.—I think it was in 1914. It was there or thereabouts. There was an inquiry in which the employers very willingly shared to ascertain what types of press were dangerous, and they were as anxious as we were to provide against the undue and unwise employment of those young people in those processes.

12,061. It was liable to very serious accidents?—Yes.

12,062. *Mr. Layton*: In the case of the chain rates, what rates were they? You are not speaking of the difference between juvenile and other rates?—No, four sets of time rates were fixed. At the beginning it was proposed as regards male workers to fix one rate. It was pointed out that that rate, if fixed, would have no relevance to and no effect upon the case of other workmen in the trade, because the types of work were separate. It was then felt by the men in those other departments of the trade that they might be affected adversely, and a strong claim was made on behalf of those men that a rate appropriate to them should be fixed. That claim was upheld by the Board, and, as I say, the four rates were in fact fixed.

12,063. Did they cover what can be called skilled work?—Yes. They did not, of course, cover the heavy part of the chain trade, but that was not scheduled. They covered a lot of work which certainly would be regarded as skilled.

12,064. *Mr. Poulton*: But you have never had any doubt, nor had those who worked the Act, that they had power to settle more than one, two or three rates if they wished to?—Not the faintest.

12,065. No one has ever seriously objected?—There has never been any question about it at any stage, and, as I say, so far as I remember there was a very deliberate conferment of those powers on the first Boards by Act of Parliament, on the advice of the Board of Trade.

12,066. *Chairman*: I suppose you would agree that as regards skilled rates the Appointed Members are not quite of the same fitness for determining them as they are in the case of the minimum rates?—That is so; but I think the word "skilled" there is question-begging, if I may so.

12,067. I thought you just called them skilled; that is why I used the term?—I referred to one particular rate which was skilled, but generally these rates would be better described by some other word. I think it was Adam Smith—I regret the absence of Lord Weir, because he would approve of my quoting Adam Smith—

12,068. We have other Scotsmen present?—I appeal to Mr. McCallum Scott for his approval. I think it was Adam Smith who said that skill was one of many determinants of wages, and that is what I would emphasise. These special rates—I think that is the better name for them—are fixed, and continue to be fixed, for all sorts of reasons other than the reason of skill. One knows that in the case of the building trade bricklayers' labourers have always got a special rate because of the periodicity of their work. If you look at the census of wages for 1906, you find that a journeyman tailor works not as many workmen do for 52 weeks a year or thereabouts; he works on an average 40 weeks a year. Again in the drug and fine chemical trade you have special rates which are described under the term "dirty money," which cover certain dirty types of work which involve detriment to a man's overalls and other garments. For these and for many other reasons a higher rate may be necessary; and the point involved may be one upon which the Appointed Member as well as anybody else can pronounce; the matter may be entirely within his competence.

12,069. That may be, but I suppose as a rule these special rates are best fixed by those who know the trade?—Personally I should prefer that, and personally I work in that direction. I think there is the tendency, to which attention has been called by other witnesses, a tendency now distinctly observable, on the part of the Appointed Members to throw the onus of fixing those rates on the representative members of the Boards.

12,070. *Mr. Pugh*: You do not see any necessity for withdrawing or for limiting the powers presently possessed with particular regard to what are called skilled rates?—No, I should regard any interference as most regrettable, and as calculated to do infinite injury to the Boards, and to destroy the very great possibilities which, as I see the matter, are now inherent in them.

12,071. *Mr. Poulton*: And that in the interests of the industry as an industry?—Certainly. We will have a chance to develop that later, but my answer to Mr. Pugh is that I can imagine nothing more misguided from the point of view of the public good and industrial order than any deprivation of those powers.

12,072. *Chairman*: Did you hear Professor Baillie's evidence?—Yes, I heard some of it.

12,073. On that point?—Yes. I should like to make a remark or two about that, either now or later, as you please.

12,074. I think it comes now.—If Professor Baillie would forgive me for saying so, I thought a good deal of what he said, though it was interesting, was hopelessly academic. I mean all that dissertation about semi-skilled and the rest of it seemed to me entirely beside the mark. You can never get agreement on a Trade Board as to what constitutes semi-skilled, and if you raised any such discussion you would have upon that matter as much feeling as would arise, or more feeling than would arise, with regard to the actual fixation of the rate. Again, the suggestion that rates should be suspended seemed to me to be not only academic, but really remote from the facts. If you had the members of the Board in the mood to agree to a suspension of the rates which would give the trade liberty, which we are assuming to be dangerous to it, the Board would, of course, be in a mood to reduce the rates to whatever was suitable to the conditions which prevailed, and that would in the circumstances, I suggest, be the proper course for the Board to take.

12,075. *Mr. Layton*: You remember that he was only referring to what he called the optional rate?—Yes. I regard the optional rate as an entirely

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

hopeless suggestion. I think I might save that for later on, because it arises at a later stage in the notes.

12,076. *Chairman:* Then as to the method of the application of the Acts, you certainly think that the method of 1918 is better than of 1909?—There are two points there: there is the question of the method by which a trade is brought into the Act, and there is the question of the kinds of trade which should be brought in. With regard to the first point, that is, the question of applying the Act, I do not suppose that there is any great difference in principle between the procedure of Provisional Order on the one hand and the procedure of a Special Order on the other, but practice and experience show that the procedure of Provisional Order, like the procedure of Private Bill legislation, has serious technical drawbacks which have been recognised in recent legislation by Parliament itself. The stiffness and inflexibility of a method not adapted to the successful handling of matters in regard to which specific evidence is difficult or impossible to obtain—

12,077. I do not think you need labour that. Nobody has suggested to us in terms that we should go back to the procedure of the Act of 1909.—I am happy to be told that. Then, with regard to the second point, I think, if I may say so, that there is a good deal of misunderstanding there. Really, the difference between the definition section of the Act of 1909 and the similar section of the Act of 1918 is the difference between a broad and a narrow test. As I have said, statistical information is very hard to obtain with regard to the wages in any trade. The Government figures are as old, I think, as 1906, and therefore they are hardly of much use. You cannot, except with very great difficulty, get that information. Apart from that, you may assume reasons for the inclusion of a trade on other grounds. There may not be the condition of low wages existing in the trade, but there may be reason to apprehend that the wages in the trade will very seriously break. It seems to me that if you can show that such a state exists it ought to be possible to get the Act extended to that trade.

12,078. When you say "will seriously break," do you mean will fall below a fair level?—Yes.

12,079. Below the level of subsistence?—Not necessarily that. Towards the end of the war, you will remember that a Sub-committee of the Reconstruction Committee was appointed to go into the question of women's employment and women's wages after the war, and they laid down in their report the principle, to which I think perhaps many members of the Committee would subscribe, that the functions of the Board ought to be preventive as well as remedial. What was apprehended then was that in certain trades there was a likelihood of a very serious collapse in wages, and the reputable employers in the trade as well as the workers in the trade were anxious that steps should be taken to prevent that backward movement. It seems to me that one ought to take into account the propriety of setting up a Trade Board where that condition exists.

12,080. That was special. That was connected with the war coming to an end?—Yes.

12,081. Then the other point I wanted to put was the one that I hinted at a moment ago; if wages is the test and the only test, then it seems to me that the Minister may, if he pleases, bring into the Act some trade which on the whole it would be improper to include.—One could make out a case, I suppose, if wages only were in question, for the inclusion of mining; one could make out a case for the inclusion of the steel trade, especially in some of its areas. On the basis of the figures in this week's "Economist," I think one could do that; but clearly it would be wrong to have those trades in, because they have this condition of high organisation which makes it quite unnecessary for the State to concern itself in that particular way with the good of those trades; so that what I am putting is that it is a question of a broad test rather than a narrow test, and the section which is in dispute might restrict, and pro-

perly restrict, the power of the Minister to bring a trade in.

12,082. Then with regard to the powers of the Trade Boards under Section 3, you say that they have led to considerable controversy?—Yes.

12,083. You say that they were identical in the two Acts so far as that goes?—Yes.

12,084. They are very similar, but not quite identical I think?—Yes.

12,085. As regards the new powers to fix a guaranteed time-rate for pieceworkers and piecework basis time-rates, you do not think that they have led to any serious trouble?—I think not.

12,086. I think the power to fix overtime rates was conferred by the earlier Act, was it not?—No, by the Act of 1918.

12,087. If so, there must have been great difficulty in working the earlier Act, unless you had power in some way to deal with overtime. I suppose that is why the amendment was made?—There was dissatisfaction that the Boards were in that respect defective.

12,088. *Mr. Layton:* The Act of 1909, I take it, gave no protection to pieceworkers except by the fixing of the time rate?—It prescribed no special treatment for pieceworkers. We fixed a time-rate that was the obligatory duty of the Board; and in the absence of any general minimum piece-rate the piece-rates had to be so fixed as to allow the ordinary workers in every group to get the equivalent of the time-rate.

12,089. The function of what is now regarded as the piecework basis time-rate?—Yes.

12,090. *Sir Arthur Pease:* That piecework basis time-rate has to be such that a normal worker can earn it?—Yes.

12,091. Supposing that there are 20 people in a shop, and three do not, what happens to the ones who do not earn it?—Probably that would be quite satisfactory. The "ordinary worker" clause is very ingenious, if I may say so, and has worked on the whole with astonishing success. It is applied with such elasticity that it is conceivable that you might have a hundred workers on a given piece-rate, and they might all be earning at a rate less than the piecework basis time-rate, and yet that rate might be pronounced fair within the meaning of the Act, because it might appear that every one of those hundred workers was in some way infirm or old, or decrepit, and if that were so, all those workers would be seen to be sub-ordinary workers, and the employer would not be open to any penalty for employing these persons at rates which yielded less to them than the prescribed rate. All he has to do is to see that his piece-rate is fair. When the piece-rate is fair he need not worry any more.

12,092. By fair you mean?—In the sense of the Act.

12,093. A rate which the normal worker, without undue strain, could earn in an ordinary day?—Just that, yes.

12,094. *Dame Adelaide Anderson:* Would you say that that really provides adequately for the case of the sub-normal worker, the one who was slow?—In the trades with which Trade Boards have dealt up to the present the situation has been easier than it may become, inasmuch as we have been dealing to a large extent with pieceworkers. So far as we are dealing with pieceworkers I think this clause is satisfactory.

12,095. *Mr. Poulton:* In practice it works out so?—It works out to the general satisfaction, on the whole.

12,096. *Mr. Layton:* The only new principle, so far as wages are concerned, introduced by the Act is the guaranteed time-rate for pieceworkers?—Yes.

12,097. And that is not in fact exercised?—It has been exercised on very few occasions. That power, and one or two other powers, were put into the Act of 1918 to enable the Boards to deal with the new types of trade to which it was expected they would be applied. As you know, under various Statutory Orders rates of wages were fixed for women in the Engineering Trade, and in that trade a guaranteed

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

time-rate had been customary. In so far as Boards were going to deal with that type of trade, it was felt right to arm them with a power with which the trade was familiar.

12,098. *Mr. Layton*: It would be correct to conclude from what you have said that any difference in the fixing of rates which may have occurred is not due to any important change in the Act, but rather to an exercise of powers which existed under the old Act?—Of course, that is qualified by the paragraph in our note which says that various new powers were conferred, but the indispensable powers were all conferred in the Act of 1909.

12,099. *Chairman*: Then you come to deal with the proposals for limiting the number of rates which a Board may fix?—Yes. That is, as we realise, a matter of very great importance, and on that I hope that Miss Symons, as well as myself will have a good deal to say.

12,100. You say that the Witness who favoured that change had in mind the position of particular trades rather than general conditions affecting trade as a whole?—Yes.

12,101. Will you develop that?—I think Miss Symons will say something about that. (*Miss Symons*): What we meant by that was that it may be quite possible for a representative on a particular Board to say to you that in his case the special classes of workers might be in a position to protect themselves, but we felt that it was our business to look at it from the point of view of the Trade Boards as a whole; and we have discovered so many cases in which the special classes of workers are as unable, or almost as unable, to protect themselves as the workers who would be covered by the lowest time-rate. It seems to us that the reasons for these special rates are so different that it would be impossible to provide for special cases, and not for others, if any amendment of the Act was suggested.

12,102. I suppose it is true to say that all these higher rates are instances of wage regulation rather than of anti-sweating legislation?—That, I think, would depend very much on the point from which you started. I mean, some of the Boards have been obliged, probably owing to the conditions with which they had to deal, to fix an exceedingly low rate. In those cases it seems to me that even your second or third rate might come within the category of anti-sweating, and not really be called wage regulation. I mean, the point at which it ceases to be one and becomes the other is very difficult to define.

12,103. *Mr. Poulton*: Have not the Boards found out to some extent by actual practice that they were bound to set another rate, because one operation dovetailed into another to such an extent that unless they set a rate for all the operations, which might of themselves be different operations, they would have about half the workpeople without a rate set, although under a Trade Board?—I think that is very true. I think that once you begin to deal with a trade you find that practically when you are in the middle of it the conditions of the trade rise up and hit you unless you deal with them; and in some cases, if only one rate had been fixed, I think there would have been serious danger that the people on the Board would have been concerned with fixing a rate for the majority of the people who were in fact covered by the Board, and that might lead, it seems to me, to a rate being fixed not in relation to the lowest class of worker, but in relation to the majority class to the exclusion of the lowest class of worker. I think that might very well happen in certain cases which I have in mind if you were confined to one rate.

12,104. *Mr. Layton*: But you would agree that the case for State enforcement of a rate of wages is very much stronger in regard to what we have called anti-sweating—the lowest class of unskilled labour generally—than it is in regard to other grades?—(*Mr. Mallon*): Theoretically that would be so, but you would look at the question practically, and you would see what you could achieve by the enforcement

of a single rate; and if it seemed to you that by enforcing that rate you would not very much improve the conditions of the trade, you would probably modify your theory a little. Just look at this question as we see it on a particular Trade Board; take the Retail Tailoring Trade Board. If you fixed one rate there to apply to male workers you would deal with a mere handful of porters. They would not be the people for whom the Board was set up to legislate; those people would be the bulk of the people in the trade; they would be the people in definite occupations, and the effect on them of your low rate would be nothing at all.

12,105. Is it not to some extent begging the question? I am assuming that the small group of people are the only people who are earning what is called a sweated wage. It is rather begging the question, is it not, to say: "But this is not any good, because it does not affect all the rest of the people in the trade"?—Surely not, because I have pointed out that the basis for a special rate is not necessarily or solely the question of skill. You have to look at the total circumstances of the occupation, and if you find a set of people whose conditions are such as to call for a special rate, then—

12,106. But what do you mean by being such as to call for a special rate?—Let us assume that you have in some section of the trade a good deal of irregularity of employment. That will not be met in the rate which you fix for the lowest grade of worker in the trade.

12,107. *Chairman*: I do not follow that last observation?—Suppose that you have porters in the tailoring trade working 52 weeks a year; suppose you have cutters and other operatives working on the average for 40 weeks in the year; then if you fix a rate of 1s. an hour to apply to the porters, it may be that that rate is not unjust so far as the porters are concerned, but it will not meet special circumstances, skill apart.

12,108. *Mr. Layton*: That particular illustration is designed to show that you may have to fix a different rate in order to produce minimum earnings? Yes.

12,109. You must turn those earnings into an hourly rate, quite clearly?—Yes.

12,110. But that does not deal with the main point: whether there is any other object in a rate sanctioned by the Board than the safeguarding of the minimum?—So far as your object is to give everybody employed a reasonable income, you cannot, as I think I have suggested, maintain your principle of never fixing more than a single rate.

12,111. You have given the case of irregular work which is to give earnings over a period; but take other cases. What reasons are there, because that would not cover the general case of the differentiation of rates?—(*Miss Symons*): If I may say a word in reply to Mr. Layton, would not Mr. Layton agree that the point at which a rate is a subsistence level is very debatable; that there is a great deal of difference of opinion as between one rate and another as to what is really a subsistence wage?—If you are in that position of doubt, and you have got to start for your lowest class of worker with an exceedingly low rate, is it not possible that you will do a serious injustice to the whole of the workers in the trade if you confine yourself to fixing that one rate? It may be that it really is not a decent subsistence wage; it may be that without any hardship to the trade, while you have got to have that rate for the lowest class of worker, you can fix other rates for special classes of workers without injuring the trade in any way.

12,112. I put it to you in this respect: I quite agree that the difficulty is to draw a line; indeed I do not see where the line can be drawn at all. But if you cannot draw it in the Trade Board occupations, do you contemplate the extension of the same idea, supposing, for example, the Government granted the petition which is now being put forward and gave legal sanction to Industrial Council rates? You start with a minimum there. You started in 1909 with the

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

minimum of Trade Boards; you are gradually extending the Acts to cover all kinds of trades; you are now asked by Industrial Councils to give legal sanction to their rates. If you are going to depart from the 1909 principle, are you not moving towards the suggestion which was put before us the other day by Mr. Wethered, in which he contemplated all wage rates in the country being fixed and having legal sanction behind them?—(Mr. Mallon): You say the 1909 principle. There is not any 1909 principle.

12,113. I withdraw that, and I say the 1909 practice in the main, with the exception of certain cases?—I do not want to commit myself to any opinion as to what should be done in the case of the Industrial Councils, but as regards Trade Boards I think the Boards since 1918 have been set up with a very definite mandate to regulate wages in their trade, and I think it all turns upon the question whether you are in favour of trade government or not. If you are, then I think your general principle ought to be to arm the Boards with powers which will enable them effectively to govern their trades. If, of course, you do not believe in that principle, then do not set up Boards of that kind; but speaking as one who believes in that principle, who has seen it, as I think, bearing fruit and bearing the promise of still more abundant fruit, I think you cannot do anything wiser in the public interest than to give the Boards those powers.

12,114. There is a distinction, is there not, between trade government, and trade government with the sanction of the State enforcing its decisions with penalties and making disobedience a criminal offence?—Yes.

12,115. Presumably decisions now arrived at may affect a much larger number of people than Trade Boards at this moment apply to, because there is still a very large margin of people who are not yet in the Trade Board system, and who are certainly not covered by an Industrial Council; so that the demand which you are putting forward may be a demand covering, several million more people than are now covered?—Yes, but is it not for those who object to the principle to show that in practice it has produced results inimical to the public good? If so, can we have a statement of what those results are? No witness has attempted, so far as I have seen, to convince the Committee upon that, and if you have regard for the number of employers and the number of trades under the Act, the thing that I think must strike you is the fewness of the opponents of the system, and the triviality of a great many of their complaints. I think that on the whole the effect of the Inquiry has been to show that the Boards have in the main the approval of the trades and of the employers with whom they have dealt.

12,116. I did not want really to argue the point; I wanted to put it in this way: whether you really contemplate the application of State-enforced wages to a very large portion of the wage earners of the country, covering, let us say, four million, five million, six million, or possibly even seven million workpeople, and covering all grades within that sphere, and all State-enforced? Is that the sort of conclusion to which you look?—If the method is that of Trade Boards, yes.

12,117. Dame Adelaide Anderson: I thought I understood you to say that practically the earliest Board we had, the Chain Board, regulated wages?—Yes.

12,118. And others did so too?—They either did or attempted to do so.

12,119. Then as regards the preventive work of the Trade Boards Acts, is it not a characteristic of most of the legislation since almost the middle of last century—the Public Health Acts, the Factory Acts, and so on—to be preventive rather than merely remedial?—Yes, I think so.

12,120. This Act shares the characteristic of other social welfare legislation?—Yes.

12,121. Setting a standard quite apart in the matter of wages; that is, a limit below which things shall not go in wages, as in sanitation, as in safety, and as in health in Public Health matters?—Yes.

Mr. Layton: It is not a minimum if your scheme of fixing all rates is adopted.

Dame Adelaide Anderson: The minimum as regards the scale of work required to be done.

12,122. Mr. Poulton: A minimum in those degrees?—I think there is a sense in which all the rates fixed by the Board can be said to be minimum rates, and I do not know any case in which these rates are not in practice exceeded by considerable numbers of employers.

Mr. Layton: Yes, but there is no analogy between rates fixed for a whole series of grades of labour and a minimum sanitation. It would be comparable only to various grades of sanitation for different grades of workpeople.

12,123. Mr. Pugh: Taking that question of compulsion, is there really any difference in the actual results by the enforcement of rates by organised efforts on both sides, by workmen and employers, and the enforcement of rates by legislation?—I do not think there is any difference in the economic effect, because what is done in both cases is that a rate of wages recognised as just by the leading employers on the one hand and the Unions in the trade on the other is gradually enforced over the whole trade. The methods are different, but the effect is the effect of enforcement.

12,124. If they are both enforced, and if there is any effect, the effect must be the same in both cases, other things being equal?—Yes, I think so.

12,125. Would you not regard the difference between Trade Board trades and organised trades which are not governed by Trade Boards as being a case where those trades which come within the purview of the Trade Boards are not able to enforce decisions whereas the others are, and that consequently you must have someone else stepping in in the form of the State in order to see that the decisions are enforced?—I should like to elaborate that just a little, because it is suggested that the effect of the Board has in some cases been to fix such rates that the cost of living is thereby increased. One need not argue the whole matter of the economy of high wages, but I hope that the Committee, when some of the older and more experienced inspectors appear before them, will ask the inspectors as to the effect which these rates in fact have had on industrial organisation and industrial efficiency. It is perfectly true that during the war the effect of that kind of Trade Board rates was negligible. Employers were enjoying altogether wider margins of profit than are normal; but if you ask the inspectors who know what took place before 1914, I have no doubt at all that you will be reassured, and that you will be satisfied that the effect of the rates of wages which were fixed prior to the war was not to increase the cost of production or selling prices, but to bring the cost of production down. There is direct evidence of that sort in the files of the Trade Boards Office, and I would submit that as a very important part of this discussion. Then, arising out of Mr. Pugh's question, what do the Boards in fact do? They do not impose any arbitrary rate upon the trade; they do not say "What would it be nice to allow people in this trade to obtain?" They find out what rates are in fact being paid by reputable employers in the trade; they find out what rates in fact are recognised by the Unions in the areas where the Unions are strong; and after discussion in which that rate is or those rates are generally trimmed a little bit, the rate or rates which emerge are imposed on the trade. The only effect of that is to ask, and to compel, backward or unprogressive employers to do what other employers in the trade are already doing. It seems to me perfectly obvious that the effect of fixing wages on that basis cannot be to raise the cost of production in the trade. Certainly it cannot be to influence adversely the selling prices in the trade, because that is already controlled by the fact that large employers in the

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

trade who are putting goods on to the market in large volume have their conditions not in the least disturbed. That happens, I venture to say, in every trade to which the Trade Boards Act has been applied.

12,126. *Mr. Layton*: That would not apply as between the low and high wage districts where a rate has been imposed which is either the London rate or something between the two; but that would be a disturbing element, surely?—Disturbing in some respects, but it would not disturb selling prices, because they would be controlled by the areas in which wages are not upset.

12,127. But it might put up prices in those areas. For instance, we have had a good deal of evidence as to exactly what has been done in Cornwall?—I should be prepared, as I think Mr. Wethered did, to make some distinction between distribution and handicraft on the one hand, and large scale manufacturing on the other. I am speaking for the moment of large scale manufacturing, and there it seems to me that it is quite impossible that there can be any general disturbance of prices owing to fixations by Trade Boards which proceed on the basis which I have described, and that is the normal and habitual basis upon which Trade Boards work.

12,128. The effect of the evidence which we have had would naturally lead to the inference that prices have not been much disturbed in London, but it does not by any means follow that that applies to prices in other parts of the country.—I should like to go into that with you. I think I could show you that in practically all the trades with which we have been dealing London is not the highest paying centre. It is in some; in others its place is not even high; in a number of women trades I have found, during an experience of 15 years, that London is often a very unsatisfactory centre of employment: that Manchester in some trades, Leicester in others, Leeds again, and Glasgow, for sets of trades, pay better than London.

12,129. *Chairman*: You mention learners incidentally. You say it is important that the powers to deal with learners should not be endangered. I am not quite sure what suggestion you have in view there?—(*Miss Symons*): The suggestion we had in view there was that, as it has been suggested that the powers of the Boards might be confined to one rate, we presumed that it might be suggested that they would also include only one rate for the juvenile workers, and the point which we wanted to make to you was that owing to the complication in some trades it may be necessary to fix several schemes for juvenile workers in the same trade, because different branches of it may require to be dealt with in different ways.

12,130. There might be different minima for two young people doing different work?—Yes. You might have one worker, say, of 15 years of age engaged in a branch of the trade where there was an apprenticeship scheme, working at the apprenticeship rate, and another worker of 15 years of age in another branch of the trade, perhaps, working on a learner's rate, because her class of work was not sufficiently skilled to call for apprenticeship; and yet a third child possibly engaged on purely messenger's work paid a rate according to age; and that it might be necessary, in order to get the most efficient training, to have all those various schemes in order to deal with that problem properly.

12,131. *Mr. Poulton*: That is to say, the practice of the Boards has shown that you want that elasticity?—Yes.

12,132. *Chairman*: I do not think anybody has objected to that, but I am not sure. It is just as well that you mentioned it.—We only thought that it might be held to be a logical development of the one rate.

12,133. *Mr. Pugh*: I should like to hear some observations on a point which was strongly urged, especially in regard to the dressmaking trade, with which I think you are both conversant. The difficulty was very much emphasised as regards bringing young people into the trade, for instance those who

have been kept at school by their parents an extra couple of years, that they could not be brought in because at a certain age you had got a certain rate which had got to be paid regardless of experience. I should like it to be made perfectly clear, if it can be made clear, that that is not a difficulty with which the Boards themselves are unable to deal; it is something which they can deal with.—(*Mr. Mallon*): Certainly.

12,134. What is your experience?—The history of that is this: before the Trade Board was set up at all a Special Order under the Wages (Temporary Regulation) Act, I think, was made, fixing a minimum rate of 7d. to apply to female workers of 18 years of age and over in that trade, and fixing almost equivalent rates to apply to female persons who were just under 18. That did, I admit, produce a great deal of trouble in the trade, because at that time the employers were willing to transfer from munition work large numbers of young girls who had worked for some time in the manufacture of munitions, and who, of course, knew nothing at all about dressmaking. These rates, which were not Trade Board rates at all, stood in the way of that transference. That was a position which the Trade Board inherited. What it did was to fix very much lower rates for young persons than the wages which obtained under this Special Order to which I refer. Apparently the provision so made, though not useless, was not sufficient, and there was, I think, some reason to complain that the employment of young persons was not likely to be furthered by the arrangement which the Board had made in that respect. Those rates have now been revised, and I think there is no longer any complaint that either as regards very young persons or as regards what are called late entrants, that is, persons who come into the trade at an advanced age, any difficulty is created by the rates of the Trade Boards.

12,135. The point is that you say that the Boards have power to deal with that situation?—Quite. The trouble was, I think, that the people in the trade who were aggrieved did everything but come to the Trade Board, and for a long time we did not know that there was this widespread complaint as to the unsuitability of the set of rates which we fixed to apply to young persons. As soon as the Board was thoroughly informed and was made acquainted with the circumstances, it acted, I think, with reasonable promptitude, and the rates were re-arranged. On that, might I be allowed to say—it will come up later on, but it is germane here—that one very serious difficulty with which the Boards in their later phases have had to contend is just this, that they legislate, but somebody else enforces. Enforcement is done from Montagu House; legislation is done from Old Bailey. Therefore, again and again we are left in the dark as to what does take place as the result of the fixing of our rates. A very large part of the smooth working of the Boards in their earliest manifestations was due to the fact that in the first place under Mr. Aves, and later on under Mr. Reid who was the Secretary of the Trade Boards Office you had these two sides of the work co-ordinated and so the Board was kept in touch; it was informed before it fixed any rate as to what was the nature of the rate which it might be expected to be able to impose.

12,136. *Chairman*: That was because Mr. Aves was both the Chairman of the Boards and also an official of the Board of Trade?—Yes, quite so, and Mr. Reid's position was equally dual. We were promptly informed, because the Inspectors were in contact with us, if anything was wrong. Now, there is this unfortunate divorce, and we determine that the wage in this trade shall be so much, and the wage in this other trade shall be something else, but at that point we lose touch with the trade, and sometimes there is a long period of time in which no adequate information reaches us as to what is going on. Before difficulties of that sort can be got over, and before smooth working again is possible, the inspectorate will have to be brought into much closer conjunction with the Boards than is the case at present.

8 February, 1922.]

Mr. J. J. MAILLON and Miss M. J. SYMONS.

[Continued.]

12,137. *Mr. Poulton*: Upon that matter you have yourself had considerable experience, have you not? I mean you are not now talking about it from what other people have told you as to the friction that arises and the unnecessary delay, and, as you say, the divorce of the two material branches; it is all actual experience of your own of the working of the Board?—Yes. There is no matter which causes more trouble on the Trade Boards than this separation, which results in bad feeling, misunderstanding, friction, and also, I am afraid, a very serious waste of public money.

12,138. *Chairman*: What is your idea in that connection? Is it that each Board shall have power to direct a prosecution?—No, I think that could not reasonably be asked. I think that all we can reasonably ask is that the two parts of Trade Boards' activity, legislation and administration, should be brought together. I think that would certainly be facilitated if the inspectors, and enforcement generally, could be directed from the same premises as those in which the Boards meet. Mere physical continuity is very important in this connection, and if we could, as once we could, call in an inspector and get him to tell us what his experience in a particular area, or a particular trade, had been, then I think we should be in a very much happier state, and some of the mistakes which have been made would certainly not be made.

12,139. *Dame Adelaide Anderson*: What is the obstacle now to calling in an inspector? It seems a strange idea that you cannot call an inspector to come and give you the information which he or she is there to acquire and to give for smooth working. What is the real obstacle?—On that I should like to refer you to the Report of the Trade Boards Administration Committee. I admit that the detail of our trouble is not set out there, but I think you will get the outline of it. We went at great length into all those questions when that Committee sat, and I think perhaps it would be wrong for me to take up the time of this Committee in a task of recapitulation; but I do suggest to you that it is a matter with which the Committee ought to deal, because until it is dealt with, and until the two sides of the work are brought again into effective conjunction, there must be this unfortunate consequence of friction.

12,140. Are there any notes of the evidence, or of the ground which was covered, beyond what is in this Report?—I think Minutes were taken, but I am not sure. Nothing like a verbatim report was made. The report of the majority of the Committee was directed to bring about that conjunction, and it provided, amongst other things, for the restoration of the inspecting staff to the old headquarters, and it provided also—and this was the point upon which we broke down—for the presence at the Trade Board Office of an Assistant Secretary to the Ministry in whom both sides of the work would be co-ordinated. It was the failure of the Minister to agree to that recommendation which made it impossible for us to set up the Advisory Committee which the Report also proposed.

12,141. If you could, in fact, at any time get an inspector or an officer brought to the Trade Board when it was sitting to enable you to get that information, would that satisfy your needs?—I think it would go very far to satisfy our difficulties. Of course inspectors are about the country, and while they are doing their work in the country they cannot be at the beck and call of any Trade Board; but there was never any difficulty under the old regime in making provision for the attendance of an inspector, if it were known or anticipated that he would be required.

12,142. You can at any time get the attendance of a factory inspector if you want it?—Yes, but it is more than that: it is the association of the two sides of the work which is so important. If the inspectors were doing their work from Old Bailey now, we should get flowing into that place a constant stream of suggestions, complaints, and comments, which would fertilise the work of the Trade Board.

12,143. One can quite see that. If you had copies of all the important reports bearing on the particular trade?—I would go farther and say that when a particular Trade Board is considering some departure in policy, or some very drastic re-arrangement of its rates, it would be of great advantage to have the inspectors who know most about that trade present, and to allow them to interpose if they thought it proper to do so, and to make suggestions to the Board.

12,144. You have to safeguard the position of an inspector as perfectly impartial between the employers and the workers, have you not?—We are very lucky in that respect. I think not since the Trade Boards began has there ever been any suggestion that the officers, all of them, are not entirely impartial. I think one of the striking things in Trade Board experience has been the extent to which the officers inside and outside the office have won the entire confidence and respect, both of the employers and the workers.

12,145. I was not really meaning to suggest anything else, only that it is important that they should be under a control which would safeguard their perfect impartiality?—Yes.

12,146. *Mrs. Lyttelton*: At present do not reports of inspectors come before the Trade Boards at all?—We recently have been given reports on administration, in which we get in summarised form the experience of the inspectors. We are told that so many visits have been paid—

12,147. Supposing you have made an Award and the inspectors have found that it has not been carried out, you do not get the evidence that it has not been carried out, or their opinion as to why it has not operated properly?—I will say that we get very imperfect information upon those points.

12,148. *Chairman*: You do get summaries of the reports of the inspectors, I think?—Yes, we do get them now. There was an interregnum in which we did not even get those.

12,149. Now you do get those?—Yes.

12,150. That would include cases where the Act has not been carried out?—Yes, certainly.

12,151. *Dame Adelaide Anderson*: But in the old days the Chairman of the Boards directed the work of the Trade Board inspectors?—Yes. That I admit is not now possible.

Chairman: Not as Chairman of the Boards.

Dame Adelaide Anderson: No, not as Chairman of the Boards?—But he did happen to be the same person.

12,152. *Chairman*: Of course that is impossible?—Yes, I agree.

12,153. It is too large?—Entirely too large.

12,154. Then may I go to the alterations proposed in the existing system? The remainder of your evidence will be printed; and we have read it and I dare say shall read it again?—If you would bear with us for a moment, there are one or two points which we should like to add upon this. (*Miss Symons*): On the sixth page, dealing again with a suggestion that rates above the one rate might be fixed by agreement, you probably have heard a great deal of evidence upon this, and we do not want to weary you, but I do want to say that we have had very many instances lately of the complete breakdown of voluntary machinery owing to competition from people who were not parties to the agreement. When I was a member of the Interim Reconstruction Committee in the Boot Polish Trade, which worked quite satisfactorily for a short time, it was pointed out to us by the employers, I am sure perfectly truly, that it was a trade in which firms could start up with very little plant, and partly for that reason and partly because a great many employers had tendered their resignations to the Committee, they were no longer able to carry on with rates which both sides had agreed to be quite reasonable, and they applied for a Trade Board. In that case the Trade Board has been set up. There was a similar case in the Drug and Fine Chemical Trade, which I will not go into in great detail, but there is one point which I should

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

like to mention. At an arbitration case which was held in July 1921, the Secretary of the Employers' Association, Sir William Glyn Jones, read to the Court a letter which he had sent to the Trade Unions in this joint negotiating body, in which he says: "At a general meeting of the Association, held yesterday, it was decided to seek the establishment of a Trade Board to cover the business coming within the scope of the Association." He remarked: "Usually, I believe, the demand for the Trade Board comes from the other side; in this case it is coming from the employers' side. It is only fair to say that it is supported by the unions, but the initiative has been taken by the employers." Then the letter continued: "The Association has been led to this conclusion by reason of the difficulty of continuing in existence as a voluntary organisation, in view of the competition with firms which are not members of the Association, and consequently not under any obligation to pay the wages agreed upon, and which, in fact, do pay considerably less than these rates." In that case application for a Trade Board was made, but the Trade Board has not yet been set up owing to the recent policy of the Government to suspend the setting up of new Boards.

12,155. The object, therefore, was to make rates which had been agreed upon between the responsible persons binding upon everybody?—Yes; it was felt that rates could no longer be agreed upon unless they were going to be binding on everybody.

12,156. But you know that the proposal put before us is that when a higher rate—you know what I mean by that—is agreed by a Trade Board, it shall be binding upon all employers, so that would meet your point?—Yes, that particular suggestion; but the suggestion was also made, was it not, that they might only be fixed by agreement and not statutorily? There was that suggestion as well as the other.

12,157. Mr. Pugh: Do you suggest that if the higher rates were left to voluntary negotiation they really would not be settled?—Yes, I suggest they would not in fact be agreed upon.

12,158. Not even by your established Board? You see, it is assumed that your Board, after fixing the rates which are obligatory, would proceed then to fix other rates which are necessary, and would do that by voluntary negotiation. Do you suggest that the Boards would not do that, and that they would break down at the point where voluntary negotiation became necessary?—I think that at that point, unless their conclusions were going to be statutory, they would in fact share exactly the same fate as has been shared by all these other bodies.

12,159. Even although their conclusion, being an agreed one, would be made statutory under the suggestion which has been put in?—That is the second point. I was dealing, perhaps unnecessarily, with both points, because I noticed that point had been made. The other point, that they could deal with these rates by agreement and that their decision should be binding, would, of course, meet the difficulty to some extent, but there our point arises that it would be very difficult to say where a vote of the Appointed Members becomes unnecessary when you are dealing with a technical question. Perhaps I may give just one instance of that, because it was mentioned incidentally, of the sugar confectionery trade. The sugar confectionery trade was faced with the problem, partly due to the war, of women being put on certain exceedingly heavy operations which had formerly been performed by men. There is a list of them: boiling of sugar and several other operations of that kind. It was felt there that this was exceedingly laborious work which it was certainly not right that women should undertake at the minimum rate which had been fixed for women by the Board. That, I suggest to you, is one instance where it is not really a technical question. If the Appointed Members were called upon to decide a question of that kind, there being no difference as to the nature of the work or as to the rate that the men were paid for it, it would be largely a question

of principle whether, in the interests of the trade as a whole, women engaged on that work should be paid some other rate than women on ordinary work.

12,160. What happened in that case?—In that case they fixed the rate.

12,161. Who did?—The Board fixed it, whether by agreement or not I am not in a position to say. I was only quoting it as an instance of a special rate in which the Appointed Members would not really be dealing with a technical question, but with a question of principle, upon which they would, I suggest, be as competent to give a decision as on any other. (Mr. Mallon): In short, we suggest that the proposal that occupational rates should be fixed without legal sanction, is a proposal that no such rates shall be fixed at all. The breakdown as regards voluntary bodies is now of a very serious kind, and new cases occur every day. In the Paper Box Trade we have an agreement including the rates which are fixed by the Trade Board, and including certain other items also, of which one is an agreement on the part of the employers to give every year a week's holiday.

12,162. Mr. Layton: Do you mean with pay?—Yes. They held a conference, and the employers asked to be released from this part of the agreement, because they told us that either they must get release or the Association would break up; they found that various employers outside the Association would not give these holidays, and the Associated Employers could only give them at a cost which competitively was very serious to them, and in the circumstances, of course, we had to allow that very important part of the agreement to be cancelled. That is an illustration of what is happening.

12,163. There is no such agreement as that in any Trade Board arrangement?—No. I want to ask at whatever is the proper stage that the Committee will take that into account. A great many sets of employers and workers are very anxious that a provision of that kind should be put into a Trade Board determination. The great bulk of the employers are perfectly prepared to consider the principle of a week's holiday, and the importance of the principle will be recognised; but they cannot effectively do that unless they have the power to impose it on the whole of the trade. (Miss Symons): The same difficulty arose in the Tin Box Trade. The Board there considered the question of a week's holiday. They were unable to make it statutory, but they made a recommendation, and the recommendation has broken down because everybody was not compelled to observe it. I was discussing the matter with some big employers the other day, who put the point that it was not being done generally, and therefore they could not consider it, because they were in competition with these other firms.

12,164. Mr. Pugh: This is rather an important point. We will assume that was a case of wages, or we will take your holidays if you like. Supposing the Board, having agreed, had been able to make that compulsory just the same as you make the minimum wage compulsory, would not that rather have altered the position? Would you then have had the difficulty which you have now?—(Mr. Mallon): Not a bit; that would have met us completely.

12,165. So that there is a distinction between an arrangement whereby you have to fix certain rates by voluntary agreement which can be made compulsory, and a case where, having fixed your rates by voluntary agreement, they can only be made compulsory if you have sufficient organisation on the workers' side to enforce them?—That is so.

12,166. You would make a distinction between those two cases?—Yes.

12,167. Then, assuming the advantage of the alternative where the agreed arrangement would be made compulsory, would you still hold that it is infinitely better to proceed to fix any rates under present Trade Board conditions whether they are higher rates or minimum rates: I mean to say that you should go on practically as you are now?—I think that is quite vital.

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

12,168. It is better to go on as you are now?—Yes. (Miss Symons): Because your other alternative, though better than nothing, would not meet all cases.

12,169. Considering what appears to be the ultimate aid in this sense, that when a Trade Board reaches a point where you have sufficient organisation you then do enter into voluntary agreements, do you or do you not think that an arrangement whereby you encourage voluntary negotiations in respect of higher rates would rather tend to extend the spirit of organisation, and would encourage the spirit of organisation, and that you would get an advantage in that respect?—(Mr. Mallon): I think that stage may in some trades be reached later. I quite appreciate the importance of it, but at the moment I think we cannot pretend that that stage has been reached. In some of the trades with which we have to do you have very large organisation of the workpeople, but it does not there embody much industrial strength. You may have, as you have in the clothing trade, a single organisation with 100,000 members, but when you analyse that membership you find that it consists of a great many of about 85 or 90 per cent. of women, and the extent of many of them are young women. As you know, their industrial influence is not very great, and if the employers are in a bad mood they can say: "Do what you like with your 85,000 women; take them out," and it does not matter, because they can very easily win when they are opposed to a union of that kind. In so far as we have got organisation of these trades, we have got organisation of that sort and in that degree, and I do not think that the stage is reached in which we can say that we can manage without legal sanction. What everybody is agreed upon in all these discussions is that it must underlie any agreement which is come to that all employers are going to pay. If you have a rate which has no legal sanction at all, that will not suit the employers, because it will mean that the rates will only be paid by those firms which belong to the Association, and at some stage, especially in a time of depression as this is, a firm will say to itself: "Why should we belong to that Association when the only benefit which it confers is the benefit of having to pay higher rates than otherwise would apply to us?" That inducement will be sufficiently strong to drive that firm out of the Association, and the Association will collapse. Take the other case in which the rates have legal sanction but are not enforced; the persons affected can apply by civil process to recover arrears of wages. That will not suit the employers' side. First of all, they will know, as practical men, that there will be collusion on a large scale between certain types of workers and certain types of employers, and where that active collusion does not exist that there will be an inertia and a neglect to demand the rates on the part of the workers which will be almost as disastrous. Whatever the precise cause the effect will be this, that only the employers who are public-spirited and conscientious men will be paying the rates, and the others will escape. That condition will be pronounced to be unsatisfactory at some stage, and the employers will ask to be released from their engagement.

12,170. Of course, I was not suggesting that you can rely upon your present organisation. I would take your conclusion to be that, having regard to the very high percentage of female labour in trades which are presently governed by Trade Boards, you could not get any advantage from an arrangement of voluntary negotiations in respect of higher rates, even although the arrangement was afterwards enforced by law, as compared with what you have now; that there would be no disadvantage to the Trade Boards at all, and I suppose you would hold no detriment to the general community, by continuing on your present arrangement. Is that your view?—Yes, very much so.

12,171. Mr. Layton: Before you actually leave this topic I would like to ask a question in regard to the third paragraph on page 6 of your statement, so as

to be quite clear as to what your view is. In effect, what you say there is that if legal enforcement is limited to one single rate, this would render the work of the Board useless. Do you mean the whole work of the Board?—I think so.

12,172. Or do you mean the work of the Board in respect of the higher grade negotiation?—I think I would be inclined to put it very highly. You see what would certainly result in a case of that sort would be an enormous resentment among the men in the trade, and among the women in the trade, who would expect some appropriate provision to be made for them and who would find that that provision had not in fact been made. That, as I said, was one of the reasons which induced the Chain Trade Board to depart from the principle of fixing a single rate. You may do enormous harm if you say to all the people in a trade: "We are going to fix a rate of 9d. an hour or 10d. an hour for the men in this trade." Since you exclude nobody, everybody in the trade supposes that that rate applies to him, and you do far more harm on the whole than if you fixed no rate at all. You would cause great ferment.

12,173. You think that to fix a minimum which would have the effect of abolishing sweating would be useless, because it would bring in greater evils?—I think that what Miss Symons said is pertinent there, because sweating is a relative term, and sweating in one grade of workers is not quite the same thing as in another; but I would like to put to the Committee this very great danger, and I think Professor Baillie mentioned it too; I am sure it is very real: that if you fix one rate you will not get a rate adjusted to the circumstances of any particular set of workers in the trade. At present we fix a rate for porters, we fix a rate for pressers, we fix a rate for cutters, we fix a rate for any other set of men who are in question, and those rates are nicely adjusted to the circumstances of those men. Deprive us of our power to fix those rates, and in so far as we fix any rate at all we will fix a rate which will take notice, to some extent, of the case of the porter and to some extent of the case of some other person. Instead of having a series of rates nicely adjusted to the grades of men in the trade, you will have a rate which embodies the worst kind of compromise, as it will apply nicely to the circumstances of nobody at all. (Miss Symons): May I give you an instance of that. The Perambulator Trade Board, of which I was a member, has fixed a set of, I think, 12 rates for men and 8 rates for women. I think it has been mentioned to the Committee as a Board which is entirely amicable and which has no complaints to make. I am perfectly certain, judging from my experience on that Board, that if you had faced it with the problem of fixing one rate for men and one rate for women it would not now have agreed upon what that rate should be. You have most of the workers in the particular works possessing considerable experience and skill; you have a certain number of general labourers, both among the women and among the men; you have got women, probably to a greater degree than in any other trade, doing exactly the same work as the men—on the same operations. I do not know how in practice you would deal with that problem on the basis of one rate. The lowest rate fixed is quite a low rate. Certainly if you fixed that rate you would have certain employers, I think, paying only that rate to quite experienced and skilled workers. You would have very great resentment if you fixed any rate in between the two, which would be entirely inappropriate to all their classes of workers, whereas at present elasticity has enabled the Board to arrive at this rather complicated position which has caused universal agreement.

12,174. Mr. Layton: I fully appreciate your argument in general, but it is difficult to reconcile so strong an argument as this with the very general commendation which I think the overwhelming majority of the witnesses have given to the Act of 1909, under which most trades fixed just the single minimum rate?—(Mr. Mallon): May I follow that up?

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

Chairman: I do not think, if I may say so, that this paragraph refers to a suggestion that the minimum only should be fixed.

Mr. Layton: I asked Mr. Mallon that, and he said it did.

12,175. *Chairman:* No, it does not. Please read it: "As regards the third suggestion that these relatively high rates, however they may be arrived at, should not be legally enforceable," this observation is made, which is quite a different thing?—Perhaps I might reply to Mr. Layton's question briefly. In the case of all those trades to which you have referred there was a quite deliberate departure, and a unanimous departure, from the principle of fixing a minimum rate to the principle of fixing an elaborate code of rates.

12,176. *Mr. Layton:* Later, after the war?—Yes.

12,177. But the commendation to which I was referring was of the effect before the war, when there was a single rate in operation?—All that they meant, I think, was that the Act in that form had conferred very great benefits on the trade, had furthered organisation, had brought employers and workers together, and had given to the trade an organ through which it could speak, and so on. That is all very true, but the result of their organisation was to make all these persons voluntarily depart from the principle of one rate to the principle of a code of rates, and I put it to you as very remarkable that not one of those Boards has expressed itself in any sense except a sense of, I think I might put it, very strong approval of the work of the Boards.

12,178. *Mr. Pugh:* That is to say the Boards that have had the most experience?—The Boards that have had the most experience. I think if you will analyse the objections of the employers you will find that they come not at all from employers who have had adequate experience; they come to a slight extent from those who have had a short experience; they come to a very large degree from those who have had no experience at all. Large bodies of employers who have never been under a Trade Board, but who have allowed themselves to be frightened by all sorts of bogies, have come along and have made a very large part of the trouble with regard to this matter; but every large body of employers who have had considerable experience of Trade Board machinery are, I think it is not putting it too high to say, satisfied with it. (*Miss Symons:*) I think it is fair to say, further, that the Boards which have fixed most elaborate schemes of wages are mostly the Boards which have not protested, but have expressed their approval of the system.

12,179. *Chairman:* That is not unnatural.—(*Mr. Mallon:*) I do not want to detain the Committee, but this is really of very great importance, and perhaps you will allow me just to say one other word about it. Professor Baillie, for instance, spoke as though it were possible to keep the discussion of a minimum rate apart from the discussion of the rates of wages generally, which ought to apply to a trade. It is not. You have your representatives of workers—of Trade Unions—meeting on one side of the Trade Board, and you have your representatives of Associations of Employers meeting on the other side of the Trade Board. They are not going to waste their time discussing an abstraction called a minimum rate; they are going, in so far as they have any power at all, to discuss rates of wages which will be applicable to their trade, and which will produce the best kind of industrial relations. Are you going to encourage them in that (as I think) very proper method of proceeding, or are you going to limit them to fixing one rate of wages, which, as I have said before, will apply with nicety to nobody in the trade? I venture to think that neither employers nor workers would think it worth while to carry on those lines. It is vital that every part of the industrial contract should be surveyed by a body like the Trade Board, and it would be a grave mistake to interfere with this supervision.

12,180. *Mr. Layton:* I see the force of the strong argument in favour of your point, but I only wanted to elicit from you how far you thought that if Parliament limited the power it would render the whole system abortive?—I do not want to exaggerate, but I think it would do that.

Mr. Layton: That is what I wanted to be quite clear about.

12,181. *Dame Adelaide Anderson:* Would it make it, in fact, unreal?—Entirely unreal.

12,182. Would you say sweating is relative; it is relative to the industry and circumstances generally, as well as to the individual worker?—Yes; in short, the case for fixing different rates for different grades of workers in the trade is precisely the same as the case for fixing different rates for workers in different trades. Why do you not have one rate for every trade? Because the circumstances of the trade, because the quality of the worker, and because ever so many other things are entirely different. For just the same reason you discriminate between your workers in a trade. One rate will not apply to them all, and it is idle to pretend that it will. If you are going to do the task which is proper to an organ of government, I think you must look at the circumstances of each class of workers, and give them, or attempt to give them, a proper rate.

12,183. Quite apart from questions of danger or exertion? Because those come into account in some cases?—I think those elements are taken into account, certainly.

12,184. And social status, partly?—That comes in too.

12,185. *Mrs. Lyttelton:* How do you meet the objections that have very often been made by employers as to the way it holds up changes in their arrangements?—That, I think, is not a controversial question, and we do not want to make it so. The view of the workers has been throughout, and is now, that they will do everything in their power to expedite the work and make it more easily adjusted to varying conditions.

12,186. Elasticity is what you want?—Exactly. We have no wish to do anything but that; and as regards objections we do invite the Committee to classify and analyse the objections which have been put in by the employers, and I think you will then be impressed by the small volume of real hostility which that analysis will reveal.

12,187. *Chairman:* Now we will go on to the next head. You refer to grouping first?—Yes. That comes under "Alteration proposed in the existing system."

12,188. Yes. You say that there should be power to group. I do not think that you need dwell much upon that?—No, I think all that I want to say upon that is that there is a steady trend in that direction. I think Mr. Wethered referred to an interesting agreement we had come to in the paper bag trade. That agreement was sent on to the paper box trade for the notice of the employers in that trade, and I think the outcome of discussions will be that those two trades will agree upon identical rates. Where you get that measure of agreement I think it is only a question of time before you can put the two Boards together. In the same way various Boards in the clothing trade are tending to find it convenient to have the same sort of rates, and that also suggests amalgamation or conjunction.

12,189. I see you suggest that if the two Boards do not agree to group, the question shall be referred to the Industrial Tribunal?—Yes.

12,190. Would it not be better to leave it to the Minister to settle it?—I should have no objection, but in a later part of the statement we bring in the Industrial Court for various purposes, and it seemed proper not to make a distinction between those other purposes and this.

12,191. After all it is the Minister who forms the Board?—Yes. I do not think we would emphasise that.

12,192. *Mr. Pugh:* You have not thought of such work as grouping being dealt with by a body which

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

is similar to what we were discussing this morning, when Professor Baillie was in the chair—what he calls the super-Trade Board? Have you any views on that?—Yes, I would like to see an Advisory Committee in existence, and I think it might help the general situation very much indeed. I am sure it would; and if such a body did exist then I think it would be proper to ask it, in the first place, to look at the circumstances of any dispute which might exist between two Boards, and I think very probably it could get the matter straightened out. If it did not, of course you would have to resort to other machinery, but in the first place I would be prepared to let the Advisory Committee look at a matter of that sort.

12,193. Of course it is rather an important development. Do you anticipate the difficulties which I daresay you heard Professor Baillie was apprehensive of, as to affecting the autonomy of the Board?—Yes. I would not for a moment approve of the setting up of a Board which would have such functions as he had in mind when he said that. I am considering merely an Advisory Committee which would work with the Minister and would deal with any troubles if such arose from time to time, and use its best offices to remove these.

12,194. The question of scope and difficulties of that kind?—Yes, quite so. I would give that committee a general power to advise.

12,195. Do you think that such a body would be any improvement upon the present arrangement of having the matters dealt with by the department with its various experts who are fully conversant with Trade Board conditions and the arrangements under the Act?—I do not want in the least to be disrespectful to those experts, but so often they do what they do in *vacuo* so to say, and the effect of that is very often unfortunate. Again and again alterations, sometimes of a purely verbal kind, have been made at Montagu House in a determination, but with very upsetting consequences. The Trade Board, acting with its knowledge of the trade, has put a determination into a particular shape because that was the best shape, and somebody remote from those considerations has, for reasons which seemed to him good, made an alteration. I think an Advisory Committee would humanise and vitalise the administration and would keep a contact between whoever was responsible for the administration of the Boards to Parliament, and the Boards themselves.

12,196. How do you suggest that the Board should be constituted?—I think it is vital to have a very important member of the staff of the Ministry of Labour as Chairman. The Minister, of course, could not be asked to find time for purposes of that sort, but the Parliamentary Secretary possibly might act as Chairman, or if not I think that the Permanent Secretary might—at any rate somebody of considerable departmental importance. He should be the Chairman, and for the rest you would have perhaps two appointed members, and equal representatives of employers and workers, not a great many. Something was said this morning as to the difficulty of constituting a body of this sort. There would be no difficulty. What would happen would be, so far as the workers are concerned, that we should select a certain number of persons who are already on the Committee of our Trade Boards Advisory Council. If it were decided to have 8 workers, very well, we would select 8 workers and those workers would have authority to speak on behalf of all the Unions. In the same way the employers through their machinery would select 8 employers. It could be brought into existence almost at once.

12,197. That would be 16, which would be rather large, would it not?—It would meet not very frequently. I should think a monthly meeting would be ample.

12,198. Mr. Layton: On this question of grouping, do you contemplate a comparatively few great Trade Boards as the final result?—Yes, that is what I should like to see, and what I hope to see.

12,199. About a dozen or 20, say?—Yes; and I think you might have sub-committees of the Boards which would deal with the sectional interests of the trade. Of course I would reserve plenary powers in every case for the full Board.

12,200. That suggestion has obvious advantages, but I would like to take your view upon certain obvious objections such as, for example, that it would be unwieldy and less rapid in its operations and so on?—I think that the constitution of that Committee would want very careful consideration. I have not considered the question at all thoroughly, but I think that what you might do is to give your sub-committees power to co-opt from the trade or the section of the trade for which they are responsible; and you would have a fairly representative sectional committee.

12,201. I have not quite followed that?—If you had one Board, for instance, for the whole clothing trade, you would have a dressmaking sub-committee on that large Board.

12,202. Who would sit with the Board when it dealt with matters connected with dressmaking?—Yes, and where matters were specially important to the dressmaking trade, or perhaps solely important to that trade, they would act apart from the others and they would be entitled to co-opt various persons to assist them in their deliberations.

12,203. What would be the effect of that upon organisation? Would it be true to say that in small Boards with comparatively local range a Board of that kind is more likely to encourage organisation?—I do not think so. I think that the Trade Board in any form is bound in the long run to encourage organisation, and I think it is encouraging it. I look forward to seeing at no very distant date a very large Union embracing all the workers in the clothing trade on the one side, and a large Association of employers representing all the employers in the clothing trade on the other.

12,204. Your suggestion would tend to enlarge the scope of the individual organisation of both sides?—Yes; I think that has to come.

12,205. Dame Adelaide Anderson: But when you get that great development of organisation in the women's industries, you think they would even then not be strong enough to stand alone; they would need a Trade Board?—I am sure so, for a long time to come.

12,206. As regards the women, one of the reasons why they are weak is that so many of them go out of the industry?—That, of course, is a very important reason. There are others.

12,207. And then there are a great many fairly skilled workers who could be brought in in an emergency?—Yes.

12,208. That weakens organisation in itself?—Yes.

12,209. Mrs. Lyttelton: And those conditions are constant; they will not change with time?—They do not change, no.

12,210. Chairman: Shall we now go on to the question of the constitution of the Boards? First you deal with the Chairman and Appointed Members. You suggest that there should be a panel, and that the Minister should appoint a Chairman after consulting the members of the Board?—We do not suggest that too strongly; we merely throw it out as a suggestion.

12,211. Then as regards Appointed Members, you suggest that the others should be chosen from panels?—Yes. What we feel about the Appointed Members is that they have perhaps had rather a rough time, and have been treated with some want of fairness, and perhaps of courtesy, but I think it is fair to say that one is often in some doubt as to precisely why an Appointed Member other than the Chairman is found upon a particular Board. Their qualifications, which no doubt exist, seem often to be nebulous. Well, that nebulousness, I think, is a mistake. I think it would be very much better to give a definite character to the Appointed Members who work with the Chairman. We have considered how one can do that most easily, and the conclusion to which we have come is the one set out here. The effect of it would be this: we think that the employers would feel that they were able without unduly prejudicing their interests

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

to go to the employers' representative, the employers' assessor, and give him such confidential information as they thought he ought to have. The workers on their part would feel similarly free. Very often there is, especially at the beginning of the Board, an unfortunate cleft between the Appointed Members on the one hand and the representative members on the other. We would like to see that bridged, and we think our suggestion is one way in which it is possible to build a bridge.

12,212. But unless you went outside the trade covered by the Board?—Oh, yes, we propose to do that.

12,213. I was going to say it would mean just increasing the number of employers' representatives and workmen's representatives. Do you propose to get employers' and workers' panels consisting of men of industrial experience?—Yes.

12,214. General industrial experience?—Yes.

12,215. Mr. Loyton: Do you think that both sides would give more information than they do to the present Appointed Members? I quite realise, of course, that when the Board is started there is a certain amount of shyness on all sides, but presumably that breaks down?—Well, it breaks down where, if I may put it plainly, you have the right kind of Appointed Member; but that right kind of Appointed Member does not exist in every case, and where he does not, then both sides are a little bit shy of making admissions which may damage them.

12,216. Mr. Pugh: I suppose the point is that whoever might be the persons, employers or workers on the Board nominated to their panels, there would tend to be a greater degree of confidence if they had the right of proposing those panels, and the Appointed Members were selected from them; is that so?—Yes. Again and again we do know that without any sufficient reason, perhaps without any reason, both sides have combined to suspect an Appointed Member, or even a Chairman. They have not known much about this individual, and they have suggested that the Minister has made the appointment for this or that reason. All that kind of thing would be got rid of at once if you had this machinery of consultation.

12,217. Chairman: Do you think it would?—I think so, if you had consultation.

12,218. Do you not think that the same kind of suspicion would remain even although the Appointed Members were persons experienced in the trade?—I think not. Of course, I realise that it is a very difficult rôle to fill.

12,219. And you would not have quite the same free consultation among the three Appointed Members as you have to-day if one of them was there rather representing the employers' side and the other representing the workers' side?—Well, they would act to some extent as feelers for the Chairman. They would help him in that way.

12,220. Mr. Pugh: It would place a great responsibility on your Chairman, of course?—It would.

12,221. Mr. Bell: Have you any experience of cases where the very fact that an employers' association have said that they would like a certain individual to be Chairman would arouse suspicion on the part of the workpeople's side?—Of course it would arouse a good deal of suspicion.

12,222. Is that not rather telling against your proposition?—No; the suggestion is that an employers' association should say so if you got some sort of agreement.

12,223. I was meaning where they were seeking agreement, and a request came from the employers' side, or a statement was made that on their side they would like so-and-so to be Chairman: has not that sometimes at once aroused suspicion on the part of the workpeople's representatives?—If there was a suggestion that a particular person should be appointed it would give rise to suspicion. Just the same thing would happen on the other side, but I think there are a great number of persons whose neutrality, uprightness and honour would not be in question. I think we should have no difficulty in drawing up a panel. (Miss Symons): And having drawn it up, we suggest that the initiative should

come from the Ministry of Labour, that they should suggest somebody from that panel to the Board.

12,224. Mr. Pugh: I am only afraid you are being rather optimistic about it.—(Mr. Mallon): Yes.

12,225. Chairman: Subject to that, you think the Appointed Members should continue?—Yes.

12,226. Then as regards the composition of the Board, you deal with the vexed question of the Trade Union officials?—On that I am not sure that this is the best moment, but I want to do it at some time—perhaps I might say what occurred with regard to the Boards that were in existence in 1918. They had to consider what use should be made of the new powers conferred by the Trade Boards Act of 1918, and they had to consider also what, if anything, should be their relation to the Whitley Committee scheme. I will put in a paper which deals with that point. The Tailoring Trade Board, one of those in existence, met to consider these matters and passed two resolutions: "That this Committee recommend the Trade Board should respond to the express desire of the Minister of Labour that the Board should act as the official consultative body for the trade, and is of opinion that having regard to the powers conferred by the Trade Boards Act, 1918, the establishment of a Joint Industrial Council is unnecessary, and recommend that the Trade Board itself should exercise the functions of a Joint Industrial Council." The second resolution is to this effect: "That with a view to effect being given to the foregoing recommendation and in order that the additional powers conferred by the Act of 1918 may be efficiently exercised, the Committee is strongly of the opinion that the constitution of the Trade Board should be devised on such a basis that the representative members should consist solely of persons jointly selected by the organisation representing employers and workers respectively, and recommend that the Minister of Labour be approached with a view to such alterations of the regulations establishing the Board being made as may be necessary." Well, that does mark, I think, an interesting departure of policy. There the Trade Board ask unanimously of the Minister that in future the Board should be constituted on the same model as the Industrial Council, and should consist of representatives of Associations in the trade. The other Boards in existence acted in the same way as from that date, and I think the Minister was giving effect to what at the time was desired by employers and workers. As from that date the workers' side of the Board has been built up so as adequately to represent all the Unions in the trade.

12,227. What is the date of that?—That is 1918, and there is attached to this Minute a memorandum, for which I was responsible, suggesting the way in which the Trade Board could make use of the powers which it already possessed—the powers conferred under the Act of 1918—and could also discharge the functions of a Joint Industrial Council. I might point out in passing that I said the functions described the memorandum under (a)—those are the functions of fixing minimum rates and accompanying conditions which become binding on the whole trade by force of law—are the old Trade Board functions, but they are given greater potency and elasticity by various provisions of the Act of 1918. That makes it clear, I think, in my view at any rate, for what that is worth, that the effect of the Act of 1918 was only to give greater potency and elasticity to the powers which the Boards already possessed. But the point I am on is that the Minister of Labour, as from that time, has tended to give effect to the wishes of both employers and workers with whom he was dealing that the Boards should be representative of the Associations in the trade. Well, of course, it follows that you do get a great number of trade union officials, but of course that is true not only of Trade Boards; it is true of Joint Industrial Councils. It was true, while they lasted, of Interim Industrial Reconstruction Committees; nor did it seem that these bodies could adequately discharge their functions if they

8 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

were constituted on any other basis; and it has to be remembered that although the presence on the Boards of actual workers is very important, and is highly desirable, yet those workers, except in very exceptional circumstances, cannot contribute very much to a general discussion, and indeed, in my knowledge of them they are only valuable when some concrete process of the trade is being referred to, and when perhaps you are dealing with a question of the actual piece-rates to be fixed for a job. As a matter of fact, the experience which a worker has in a trade is very often restrictive. A worker has worked in a particular factory in a particular process. His knowledge of the trade is not a general knowledge such as an inspector of the Trade Boards might hope to attain to; it is a limited and circumscribed knowledge. In short, he is able to talk about the concrete process that he knows, but he knows nothing else, and therefore if you confined yourself to workers in the trade as is suggested, you would have a volume of experience which would be entirely insufficient for the carrying on of the work of the Board.

12,228. *Mr. Pugh*: But is not the question rather this; at any rate, this has been raised: Where the objection has not been made to the Trade Union representatives the argument has been that they themselves have no practical experience of the trade. What do you say about that?—Well, in some cases, of course, it is quite true. It is quite true where you are dealing with a trade in which there is not any craftsmanship and where the workers are distributed over a number of general labour unions. You have to give representation to all those general labour unions; each of those unions includes members who work in ten, or twenty, or thirty, or forty trades; and it follows that you have a great number of people who have no knowledge of the trade.

12,229. But you have always got somebody who knows something about it?—You have always a great

number of people who have first-hand knowledge of the trade. I think a great deal too much has been made of the matter. You had Mr. Barnard especially talking about the question as though it were one of very great importance. Mr. Barnard, after saying that nobody but an actual employer or worker should be on the Board, proceeded to express his indignation that the Board did not find a place for Mr. Quilter, who, admittedly, was not and never had been, a worker or an employer in the trade.

12,230. I think it came down to this, as regards most of the criticism referred to, that the majority—some said 75 per cent.—of the members of a Board ought to be persons who were, or had been, engaged in the trade?—Well, I should not like to contest that as a general principle. I quite agree that it is important that the workers in the trade should be heavily represented.

12,231. Then as regards district trade committees you would leave that to the Boards?—Yes. There is a good deal to be said about that and the other question of district rates. I do not know whether you want to go into that matter?

Chairman: I am afraid that I cannot remain any longer. If the Committee desire to conclude the evidence of this witness, would somebody else take the Chair?

Mr. Pugh: I think Mr. Mallon is rather an important witness, and I should not like his evidence to be curtailed. I should suggest, unless you think it is practicable to finish to-night, that we should adjourn now and finish Mr. Mallon's evidence later.

12,232. *Chairman* (to *Mr. Mallon*): When would you like to come again?—I am very largely at the disposal of the Committee; I have given the Committee a good deal of trouble, and I should like to consult its convenience.

Chairman: I am told that there will be time next Wednesday morning to conclude your evidence.

(Adjourned till Wednesday next, the 15th inst., at 11 o'clock.)

TWENTY-FIFTH DAY.

Wednesday, February 15th, 1922.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE, G.C.M.G. (*Chairman*).

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTELTON, D.B.E.

MR. JAMES BELL, M.P.

SIR ARTHUR F. PEASE.

MR. E. L. POULTON, O.B.E., J.P.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (*Secretary*).

Mr. J. J. MALLON and Miss M. J. SYMONS recalled, and further examined.

12,233. *Chairman*: Mr. Mallon, you had reached a point in your evidence where you dealt with District Committees, and you have expressed the view that this matter should be left to the individual Boards?—(*Mr. Mallon*): Yes. I thought it might be interesting if I elaborated that just a little, because the point is one of importance, and a good deal of attention has been given to it. The representatives of the Unions on the various Boards have never been, and are not against differentiation. All they desire is that the Boards should be given a free hand and should be allowed to do what seems on the whole to be best for the trade with which they are dealing. As regards attempts that have been made in the past to fix differential rates, I ought perhaps to say that both sides—employers and

workers—went into the matter without bias, and they did their very best to meet any cases of grievance, or alleged grievance, that were put to them; but they were held up by practical difficulties. Generally there were three points in these discussions. It was argued that where a manufacturer is in an out-of-the-way part of the country he is handicapped by that, and therefore it is not right to put upon him just the same obligations as regards wages as are borne by employers in large centres. We found on investigation that that was not quite as simple as it looked. In the first place, there was the offset of low rents and low rates.

12,234. Low local rates you mean?—Yes. If you have two places in the Eastern Counties—and we had a good many of these places put before us—

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

there was a very wide difference between what was paid under these headings there and what was paid by employers in, say, London. That was the sort of thing that we had to consider on the first point. The second point was this: It was said the Unions in the great trades assent without demur to the fixing of rates on a district basis. Why then do you make difficulties on these Boards? Of course we explained that we did not make difficulties. We pointed out that so far as the Unions assent to wage variations on a district basis, their assent is little more than the register of the variations in the strength of their organisation. I got out some figures years ago to show this. I took the towns of Hull and Leicester, and I compared the rates of wages which were in fact being paid in the building trade, in the engineering trade, in the furnishing trade, in the printing trade, and so on, and I showed that whereas those rates were in some cases low in one of these towns they were for other trades high in the same town, and I think I did make the point that there is no principle of scientific adjustment of Trade Union rates to local conditions. There is little more at the back of those variations than the greater or lesser strength of the organisations which are concerned in the fixing of them.

12,235. Do you mean that these Unions really differentiate on no other grounds than that? Have they not some regard to economic conditions if they agree to a differentiation?—Economic conditions come in, but I think you will find it generally true that if the organisation in any area is strong, wages tend to be high. If the organisation is weak, wages tend to be low.

12,236. Is that really the basis on which the Unions proceed?—I think you will be driven to that conclusion if you look at the documents which are in question.

12,237. I am rather surprised at the managers of these great Unions assenting to that principle?—I think that there is no question that they do in practice accept it. You can find no other basis for a rate of 28s. in certain parts of the Eastern Counties for engineers when the London rate is 42s. That was the case before the war.

12,238. Is not a basis to be found in the differences in cost of living, in transport, and other matters, as between the Eastern Counties and London?—That is my third point, and I will address myself to that now.

12,239. *Sir Arthur Pease*: But take the Co-operative Societies. We have had evidence of their rates, and they have a differential rate for their employees in different districts of the country, and, of course, as you know, they pay a much higher rate than the average?—Their scale for women, brought into operation, I think, about 1913, was on a flat basis. It gave a wage of 17s. to women 20 years of age and upwards in all parts of the country. It is quite true that some of the local Societies were slow to adopt that scale; but pressure to adopt the scale was kept up persistently, and I think most of them did eventually adopt the scale.

12,240. I have not got the figures in front of me at the moment, but they put in a definite statement showing very large variations in the rates which they paid in different parts of the country—one was the Midland area, another the Northern area, and another was the Southern area—which had been agreed to?—Yes.

12,241. *Mr. Poulton*: These are all distributive trades?—Yes.

12,242. *Sir Arthur Pease*: I presume they had reasons for doing that?—Yes. Those reasons might be—I do not pronounce on that—the strength of the organisations in the areas where the rates were higher than in the other areas. I would not like to commit myself on that particular case.

12,243. They were the general rates of wages paid in those districts for all other kinds of employment, were they not?—I do not know.

12,244. *Chairman*: Take the Joint Industrial Councils. I have got before me the figures for

general labourers employed by Local Authorities. The country is divided into certain areas which they call zones, or grade areas. Surely those zones and grade areas are not fixed according to the strength of industrial organisation?—I do not say solely, but I do say mainly. May I ask you to do a simple thing? Take two towns, as to which the index figure in the Board of Trade tabulation of the cost of living is the same. Then take the rates of wages which are in operation for given trades—trades that occur to you—and you will find that there is a fluctuation—a difference—between these sets of rates explainable on no other principle than that in certain of the Unions concerned organisation in that place is strong, and in other Unions it is weak.

12,245. *Sir Arthur Pease*: But even within one area governed by the same Trade Union and the same organisation, substantial differences are found in different parts of the area on account of the differences in the district. One is near a seaport—a disagreeable district to live in—and wages are very high. In another case perhaps it is in a country district. There is the same Union and the same District Committee, if you like, but still there is always a substantial difference?—Yes. The circumstances in a given area may tend to favour a certain high wage, but if the workers concerned in that area are not strongly organised they will not be able to take advantage of those favourable circumstances.

12,246. But they are organised in exactly the same way, as far as I know, in the case to which I am referring?—I should think—but I do not dogmatise—that the wages would tend to be the same. I do not say they would always be the same, but that would be the tendency.

12,247. 99 per cent. of the men are in the Union?—Yes.

12,248. *Chairman*: Perhaps we may pass from what is in the minds of the managers of these Unions and come to your own view?—May I deal with the question of the cost of living? If you look at the Board of Trade inquiry which took place, I think, in 1906 you will find that the variations are from 100—which is the figure to represent London—down to, I think, a figure of about 80 or less. I have not got the figure before me. When you try to relate those varying figures representing cost of living to wages in the areas, you fail entirely to do so. When the Tailoring Trade Board was established, we devoted a lot of time to this question of variation, and we were not opposed at all to the principle that there should be a variation based upon the differing costs of living; but we found that would have involved us in quite preposterous situations. For instance, the wages in the wholesale tailoring trade for women were higher in Manchester than in any other town in the country. The wages for women in that trade were lower in Norwich than in any other town in the country. Yet if we had persisted on the basis of cost of living figures we should have been compelled to fix a higher rate for Norwich than for Manchester, because the cost of living was higher in Norwich than it was in Manchester. The cost of living in Norwich and Ipswich—two towns which are industrially difficult—was appreciably higher than the cost of living in Leeds. I mention this to show how difficult it was for the Boards, and how difficult it is, even if you have all the goodwill in the world, for them to find a basis for differentiation. Mr. Wethered, I think it was, made a distinction between manufacturing trades, whose commodities tend to find the same markets, and other trades like those of distribution, and handicraft production which tend to sell in the local market. I think the workers as a whole will be prepared to follow that line, and I think they are now gradually tending to follow that line. But where you are dealing with manufacture, you find it almost impossible to get a principle of differentiation which does not create more difficulties than it remedies.

12,249. If you are going to have differentiation in areas, say for distributive trades, have you any

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

view as to which is the better mode of differentiation—whether by population or in some other way?—I think you can only put it on the basis of population. That, after all, is something existent—something demonstrable—and you can administer on that basis. I do not know on what other basis you could administer.

12,250. I think some trades have fixed zones; that is, they have taken in some industrial area and made that a zone and fixed a rate there according to the index figure, or something of that kind. Have you ever had occasion to consider that matter?—No. On the Boards to which I have belonged we have differentiated in one or two cases on the basis of population. There has been no attempt to do more than that, and I should think—though again I speak with diffidence—that the zone difference would be full of peril. Within the zone you would almost certainly get inequality of conditions comparable with the inequalities which exist in the country as a whole.

12,251. The building trade has zones, I think?—Yes, it has.

12,252. Do you find that a difficulty?—I should think you would find it a difficulty. I am not speaking with exact knowledge, but I think you would. It certainly would be a difficulty which would occur in so far as the zones were large.

12,253. You would leave it to the Trade Boards to set up District Committees, or not?—As they choose.

12,254. And then I think you want to say something about abolishing the Committees if they are no longer desired?—Yes, that is important. I think it must be a defect or an oversight in the Act of 1909 that it empowers the Boards to create District Committees, but it does not empower them to throw down those District Committees when they are set up. The consequence of that is, of course, sometimes serious. You create a scheme of District Committees. In the paper box trade, for instance, we have nine of them. Having brought them into existence these Committees pursue us—we cannot get rid of them. They have no useful function, as we have found.

12,255. Mr. Poulton: They can pursue you?—Yes. They cost the country a good deal of money, and we are bound under the Act, whenever we vary a rate, to send our proposals down to the Committees. That means, of course, that the Committees must be convened, and that a great many people must be drawn together to attend them, and all that is futile. I think the Trade Boards should experiment in regard to district machinery, but, of course, they never will experiment if they realise that the consequences of setting up District Committees is that, if set up, the Committees will remain in existence for ever. I think it is only a defect in the Act.

12,256. Mrs. Lyttelton: What were the ideas your Trade Board had in their head when they set them up? What made them have them?—It is kind of you to suggest that we had any idea; but it was that we were all fresh at our job. We had not any preconceived ideas, I think, at all, and since the Act gave us the power to set up District Committees, we thought it wise to set them up. There was no wish then, or, I think, now, to choke the free expression of district opinion.

12,257. Chairman: Do you on those Boards consult those District Committees before you propose a rate, or only after proposing it and before fixing?—There was some discussion on those earlier Boards whether the Board should send down to the District Committee a recommendation, or whether they should throw the onus of recommending on the District Committee. The course adopted, I think, in every case was to send down two rates. The employers proposed a rate, and the workers proposed a rate. Those two rates went down to the Committee for consideration.

12,258. That was before the proposal by the Board?—Yes.

12,259. Mrs. Lyttelton: Why should they be a failure; that is what I want to get at?—There is a number of reasons. I see my friend Mr. Harmer is good enough to attribute their failure in the tailoring trade to me, but that does me more than justice. What did happen was that the trade about this stage began to be organised, very largely, I think, as the result of setting up the Board. The employers had to organise themselves in order that they might say something collectively. In just the same way the workers had to organise themselves. But, of course, this organisation covered not merely the Central Board but the District Committees, and since the two sides had formally adumbrated their policy on the Central Board, they were bound more or less to say the same thing on the District Committee, and that is, in fact, what happened. It was not worth while to have District Committees to say "Ditto" to the main Board. I have thought a good deal about these District Committees, and my own view is that in general there is not any particular use for them or grace in them. But I think where a special district is disposed to argue that its circumstances are special—that its problems are different from those that exist in other towns—there is no reason at all why that district should not be given some machinery through which it can speak, as long as plenary powers are not conceded. I think the vital thing is that plenary powers must reside in the Central Board.

There is one other thing I would like to say. I have felt, as I think others who are on Trade Boards must have felt, considerable regret that the workers for whom we legislate, and the employers for whom we legislate, do not know enough about the work of the Boards. We think if they knew more, and the whole thing was more alive and fertilised, there would not be these misunderstandings. I do not know what the suggestion is worth, but I have always thought that it would be useful to have in the districts, not District Committees but occasional district meetings; they might be half-yearly, or they might be yearly. To these district meetings representatives of the local employers and of the local workers would be invited, and they would receive from their representatives—employers and workers—on the Central Board an account of the stewardship of those persons, and those who attended the meetings would have a right of question and comment and criticism and suggestion. I think that procedure on those lines might be useful.

12,260. Chairman: The meetings would be called, I suppose, by the representatives on the Board?—I think it ought to be done officially. I think there ought to be a notice sent out as from the Trade Board or from the Ministry of Labour—preferably, I think, from the Trade Board—that these meetings would be held on a given date, and two representatives from the workpeople in each factory, say, should be invited to attend; and such employers might be invited to attend as chose to turn up. Then they would receive an account from the people who purported to represent them.

12,261. Sir Arthur Pease: Would there be no possibility of dividing the actual work to be done—say, fix the general principles on the main Board and leave a lot of the detail for carrying them out to the District Committee?—That is desirable, and I should like to see a development on those lines. The only difficulty in the way of doing that, I think, is a practical difficulty. If you take the areas of the District Committees which have been set up, you find that these areas are very large, and it is almost as difficult to convene a District Committee for any purpose as it is to convene a meeting of the Board. Then when the District Committee meets, since its members are drawn from a very wide area, it has not that immediate knowledge which is supposed to be the virtue of these Committees. If, for instance, you have a Committee in the tailoring trade—as you have for the North-East—you draw representatives from several

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

counties, and if you are dealing with a case which has arisen in Bradford, or in Stanningley, or some other such place, it may be that nobody on your Committee comes from those towns or has any knowledge of them. Then your District Committee has no more advantage in dealing with a case which arises there than your Trade Board would have. That is a difficulty I see there, but on the general principle I agree. I wish it could be done.

12,262. But in the big organised trades, even where there are national settlements, it would be quite impossible to carry on without having District Committees of employers and employed to settle hundreds and hundreds of difficulties which arise from time to time?—Quite. That contact is made in these trades by the local organisation. The local Association of employers is in touch with the Unions.

12,263. Outside the Trade Board?—Yes.

12,264. There is one point on a matter which was raised a little way back. Have you experienced as a Trade Board any evidence that in a particular district where a trade is concentrated the workers are actually worth more and do more work in a given time than they do in an outlying district?—Yes, I think there is some evidence of that, certainly. I think if you take the town of Leeds you get a concentration on the clothing trade which does result, over a period, in the acquirement of a special degree of skill by the workers. That illustrates one sense in which the minimum never can become the standard. We fix a minimum rate for women in the tailoring trade. It does not matter what rate we fix, the rate paid in Leeds is always above that rate. That is perhaps one part of the answer to those who say we ought not to fix flat rates. You have a flat rate, but on top of that flat rate all sorts of economic influences begin to get to work, and the reasons, whatever they are, which have decided that the rate in Leeds should be something more than the rate in Norwich will again manifest themselves, and the Leeds rate will climb up on top of your flat rate. So you have a flat rate co-existing with wide variations on top of the flat rate.

12,265. Your flat rate would be the standard rate in one place, but only a minimum rate in another?—Yes. It is a flat minimum; but above the minimum you have very wide variations which are explained by such facts as those to which you direct attention.

12,266. Mr. Poulton: That would not necessarily become a standard rate, even then?—No.

12,267. A minimum is entirely different from a standard rate?—I mean that you have your minimum, but your standard rates do tend to be sometimes very widely ahead of your minimum rate.

12,268. Apart from the question of District Committees, where they have been set up, considering proposals sent down from the principal body, would you give them any initiative? Suppose they had got some special difficulties in a district which they felt were such that the central body had no full knowledge of, should they be allowed to make proposals to the central body?—I think they ought to have the widest powers of that kind so long as those powers are powers of suggesting.

12,269. I do not mean legislation?—I entirely agree. I think they ought to have powers.

12,270. Chairman: Perhaps we had better go now to the next point. On the question of the period for objections, I gather for a new rate you would keep to the present period of two months, and for variations you would reduce it to one month?—Yes.

12,271. Then as to amending proposals without re-proposing, you would allow a power of amendment?—Yes; I think that is important.

12,272. But only, I gather, if the amendment is agreed on both sides?—Yes. I think that would meet with all the serious cases in which it is desirable to make an alteration.

12,273. Now as to confirmation, which is an important matter. You deal with the question of confirmation of rates by the Minister?—Yes.

12,274. You agree that there must be some confirming authority?—Yes.

12,275. I suppose someone responsible to Parliament for the confirmation?—Yes.

12,276. But your Council propose that the Minister should be limited either to confirming the rates sent to him by the Trade Board or referring them to the Industrial Court?—Yes. As we see the matter, there are three possibilities. You could contemplate an entirely autonomous body and let it fix and enforce its own rates—at any rate, definitely fix its own rates. I think, if I may say so, that there is more to be said for that policy than appears on the face of it. The Board does tend to be sober and responsible in the degree in which it exercises real power, and in so far as you take power away from it, I think you tend to devitalise it. If the Boards had the powers which they now enjoy, and had much more information than they now possess—as to which we shall say a word in a moment—I think there is no reason to suppose they would make an unwise use of their powers. I think rather that the fact that there was no appeal from them would tend to make them move with great circumspection. But I do not press that, because I think it is unlikely, in all the circumstances, that the country would contemplate the setting up of Boards of this kind with full powers. The other possibilities are to set up a Trade Board Council such as was proposed, I think, by Professor Hobhouse, and the proposal we make here. With regard to the Trade Board Council or super-Trade Board, or whatever it is called, we do not criticise that, and we realise that it has some very great advantages. On the whole, however, it does not seem to us that the policy would be likely to meet with public approval just now, and we do not press that either. What we feel very strongly is that the present system is a thoroughly bad one, and it is bad for, among other reasons, this: It does expose the Minister—or it is thought to expose him, which is just the same thing for all practical purposes—to political pressure. The fact that the pressure is exercised, or is thought to be exercised, is a very serious matter. We have tried—those of us who have been connected with Trade Boards from the beginning—to keep Trade Boards out of politics. Once you let Trade Boards be labelled this or that, their usefulness is compromised and almost gone. Just at present it is being reported to this or that Board that this or that powerful politician has sent in a protest against the rates which are proposed to be fixed in this or that trade. I need not emphasise the seriousness of that.

12,277. Mr. Poulton: Do you mean that he has sent it in as a member of the industry, or as outside the industry?—Outside that industry. There is no reason why I should not mention the name; it does not carry any censure against him. It was said to the members of a Scottish Board that a letter of protest against the rates—couched, I am sure, in quite correct terminology—was received from Mr. Bonar Law. Naturally, it upset the workers on that Trade Board, and other names were mentioned in that connection. In so far as there is a possibility of that, we have, I think, a very undesirable state of affairs. What is felt always in these matters is that somebody is seeing the Minister, or may be seeing the Minister, and as to that we know nothing. When the Minister, for good reason, says: "I will not confirm these rates," or "I refer them back," we do not know what considerations have induced him to take that course. That is very unsatisfactory. I need not emphasise the state of affairs which exists at present. Miss Symons, I think, will say something about it on that; but it is very unsatisfactory. The fact that a good many employers are dissatisfied with the Trade Boards machinery proceeds to a large extent from the Minister's inexcusable and, as they see it, entirely unexplainable dilatoriness. Every employer wants a rate at a given time, he cannot carry on his business if a scheme of rates is hanging over him—nobody can—but that is what he cannot

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

get. He does not know where he is from six months to six months, and he cannot get ahead with his costings.

12,278. *Chairman*: As between the Central Board which is proposed and the Industrial Court, I suppose the Central Trade Board would be rather quicker than the Court?—Yes, I think it might be.

12,279. And it would also, it was suggested to us, have the advantage that it would contain representatives of both employers and workmen?—Yes.

12,280. And there would be a certain number of them, but the Industrial Court, I suppose, would be a smaller body?—It would be a smaller body.

12,281. And it would have a lawyer—perhaps Sir William Mackenzie or someone else—presiding, and two other members?—Yes. We make the suggestion, which you have noted, of course, that for the special purposes of these appeals, so called, there should be added to the Industrial Court certain persons—we do not say anything, I think, as to numbers—who have appropriate experience, as assessors.

12,282. I suppose you would have before that description of tribunal a formal argument, possibly with Counsel?—I should hope not.

12,283. That is what I was wondering?—I should think that that would be lamentable, because I think it would have the effect of going far to sterilise the Boards. If the Boards thought that there was going to be in every case an appeal, and that the case would be argued again, the effect on them, I think, would be grave.

12,284. I suppose you would have to make rules of court to meet that point?—Yes. I sympathise entirely with what you are saying. I think that would require very great care. The presumption must be that when a Board, thoroughly representative of its trade, has with deliberation come to a conclusion with regard to that trade, that that conclusion must be right. I think you cannot proceed on any other basis. Therefore, that implies some limitation of the cases in which appeals should be allowed; but I do not take it upon myself—and I do not think Miss Symons will either—to suggest what those limitations should be.

12,285. That wants a little thinking out. I have come to no conclusion at all. I am really only desirous of knowing which is the better plan?—Quite.

12,286. Would it be better to have your Central Board, or whatever you call it, just hearing the representatives of the two sides of the Board, and any other evidence they want, and deciding the matter in a room, or to have what must be, I think, a somewhat more formal hearing before the Industrial Court?—In so far as it is formal, it is bad. I think we want to have the most informal procedure possible. I think it is highly undesirable that we should have protracted formal argument, because that very often conceals the truth rather than reveals it.

12,287. You have got this difference, have you not, that whereas the Central Board would contain men who have experience of a good many trades, the Court is presumed to know little or nothing before the hearing begins?—Yes. The Trade Boards have a grip on the wages part of the trade as a whole, and I think that is good. I do not think we want to put the Trade Boards on a sort of economic island and leave them to themselves. They must have a relation to the main wages system of the country.

12,288. I suppose your Central Board would inform itself as to that?—Yes, it would have to if it were going to do its work properly. I really feel very much what you feel—that the qualities of informality and expeditiousness and so on would be possessed by the Central Board more than by the other tribunal. But I think the other tribunal has by this time earned for itself an accepted place; it has got a status, and I think there would be a disposition on all hands to accept its decisions.

12,289. It would be possible to give the Minister an option so that he could refer minor matters to the Central Committee and matters of importance

to the Industrial Court?—Yes, I should think that is not impossible. I should like to think about it. On the face of it, if I may say so, I think it is a good suggestion.

12,290. *Mr. Poulton*: There would have to be a safeguard to prevent a Court of this sort delaying things?—Yes, I quite agree. I should hope it would be possible, if the suggestion we make is taken advantage of, to limit in some not captious way the reference of cases. I think that if the Minister is satisfied that no very great harm will be done by the fixing of a rate, then he should fix the rate, because it may be supposed to have been sent to him as the result of the very careful deliberation of the Board. If the Board has not very carefully thought over what it is going to do, it has failed in its duty. If there is no suggestion of that sort, the Minister should fix; but if, on the other hand, he thinks there is a possibility that the Board's mind has not been fully informed on some question of importance—if he thinks that certain industrial or other harm would be likely to result from the fixing of these principles, then he might refer the matter to this expert tribunal.

12,291. On page 9 of your statement, do I read your evidence aright in thinking that your suggestion would really take away from the Minister every power of even suggestion; that is to say, he becomes merely a registering machine?—Yes, that is broadly the effect of our suggestion. We think that good from the point of view of the Minister himself.

12,292. I am wondering whether that is not going too far the other way, and whether he might not have some power of suggestion without setting up the machine, because however simple the machine it would take time?—(*Miss Symons*): Our difficulty about that is that the present system unfortunately takes more time. Perhaps I can give a recent instance. There was a Trade Board set up quite recently. For various reasons there was a delay of two years in setting up the Board. It was the Boot Polish Trade Board. It eventually fixed a rate. There were various delays before the rate was actually fixed, in order to enable the employers to consult the trade as a whole. When we met finally, there was one point in the whole set of rates on which we could not agree, and they were carried by a vote. But the employers very fairly said that they were not playing for time and that they hoped, as we did, that the final result of the Board would be brought into operation very rapidly. The period suggested was a fortnight. A fortnight elapsed, and no word was heard from the Minister as to what had happened. As Secretary of the workers' side, I wrote two letters, to which we got no reply. We finally went to see the Ministry of Labour and asked them what they proposed to do on these rates, and what their reason was for the delay. All we discovered at length was that nobody had appealed against the rates. There had been no definite appeal to the Minister that these rates were dangerous, and we could not ascertain the Minister's reasons for delaying the matter. We do not know whether we are going to get those rates. That is the kind of difficulty we are so anxious to remove, because we feel it weakens the whole status of the Board and makes it appear that their lengthy deliberations are a waste of time. It leads to uncertainty. Our difficulty is, in dealing with Mr. Poulton's point, to give the Minister any scope without involving ourselves in that kind of difficulty—a position in which we are simply held up, and uncertainty and dissatisfaction are caused all round.

12,293. I had not that kind of thing in mind. I was thinking of a case where you are framing complex conditions of employment. I have just had such a document myself. It was put into the hands of two or three people, and we found mistakes in it, and it had to be rectified. Obviously you do not want this elaborate tribunal to rectify something which is quite plain. I do not mean the case put by Miss Symons?—You mean some legal and technical point?

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

12,294. Some oversight in the composition of the thing?—(Mr. Mallon): Doubtless that could be dealt with in the period allowed. We ask that the Minister should, in a given time, confirm the rates or refer them to the Industrial Court. Possibly in that time there would be some informal conversation between the representatives of the two sides and the thing agreed. (Miss Symons): On that point, do you not think that a good many of those difficulties would probably be removed in the proposal stage? In fact, our difficulty on some Boards has been that the Minister has allowed the whole of the proposal stage to elapse without calling the Board's attention to legal difficulties in their determination, and has raised them at a later stage after the rates have been actually fixed, which has caused delay at the last minute which might have been prevented by consultation between the legal adviser of the Ministry and the Trade Board at the proposal stage.

Mr. Poulton: It seemed to me that there was no latitude allowed him at all. All that he was to do was to register.

12,295. *Chairman*: If you gave the power to him to amend the proposal by agreement that would be satisfactory, combined with the power to refer to the Board?—(Mr. Mallon): I think so.

12,296. Now passing to the question of scope, you think that that should be first considered by the Trade Board or Trade Boards concerned, and if the Minister accepts their view his decision should be binding?—Yes.

12,297. But if he cannot accept it, or if the allied Boards express contradictory views, then you would give power to refer the matter to the Industrial Court?—Yes. All that we say on that is that the important element of these matters is time, and certainty. What is important is that you should know whether a given article or a given process is to be included within the scope of the one Board or of another. Employers, I find, do not very much worry as long as a definite decision has been reached. What they cannot stand is uncertainty.

12,298. Mr. Poulton: They want to know where they stand in relation to hours, wages, and general conditions, and that is the idea behind it?—Yes, that is the idea.

12,299. *Chairman*: Then passing to machinery for enforcing rates, you deal first with inspection. What do you say about inspection?—I think inspection is a very large part of the trouble. It was natural perhaps during the war that very much thought should not be given to this machinery; more important machinery had to be thought about. But after the war very precious time was lost, and for reasons into which I need not go, some of the most experienced Inspectors were allowed to leave the Trade Board office. That was a very great loss. Those Boards were started in very considerable number, but no very efficient machinery for enforcement was provided. That created a state of things as to which I, and I think all my colleagues, have the greatest sympathy with the employers who are concerned. A great number of employers were entirely loyal. They paid rates which they had agreed to at a time when they were perfectly well aware that large numbers of their fellow traders were not paying those rates. That put a very heavy strain upon their loyalty such as, I think, ought not to be put upon it. The fact that that was so, affected more than the trades immediately concerned. The opinion was spread that under the Trade Board Acts a number of employers who were public spirited and so on, felt compelled to pay, and did pay, certain rates of wages, but other employers of a different kind did not pay these rates. Nothing could be more fatal to the repute of the Boards. Another trouble was that when the Ministry of Labour were persuaded that there was a great gap in the inspection they endeavoured to fill it—no doubt with the best motives—from the ranks of not very highly qualified persons—those who were engaged in non-compliance work under the Unemployment Insurance Act. As I think the Inspectors, who I understand are going to give

evidence, will make plain, the work of inspection under these Acts is very highly skilled, and it is not possible to bring in people of inadequate experience and education and ask them to do this work. They cannot do it well.

12,300. Could the factory inspectors do any part of it?—They could, of course. The factory inspectors are entirely of the right stamp, but the factory inspectors, I imagine are very fully employed. There are not a great number of them, and then as regards the examination of wages books, which forms the main part of the employment of a Trade Board inspector, the factory inspectors have not had any experience, and they would have to be trained for that special work.

12,301. They have to look at particulars, do they not?—Yes.

12,302. *Dame Adelaide Anderson*: They have to start with a general knowledge of the investigation of wages books from the point of view of wrong deductions?—Certainly.

12,303. Under the Truck Acts as well as under the written particulars?—Yes, of course they are by no means strange to the technical aspects of wages.

12,304. And they have also conducted very difficult proceedings connected with wages?—Yes. I should like your view as to whether factory inspectors could combine with their already multitudinous duties this very large and technically difficult job of inspection of wages.

12,305. I do not want to place a new burden upon the factory inspectors. I only wanted to make it plain that they had some knowledge to start with?—Yes. What I should like to emphasise is the very specialised nature of the work. If you are dealing with a complicated scheme of piece rates, and if you have in every group to find the ordinary worker, you cannot do that unless you are accustomed to that job, and I do not know any set of inspectors—much as I esteem the various groups of inspectors—who would, without a good deal of training, be competent to do the work which is done by the Trade Board inspector of the best kind.

12,306. *Chairman*: It seems to come to this, that you do not think we can get on without additional trained inspectors?—That is what we think. I think there are ways, and we will discuss those ways, if you will let us later on, as to how that burden of inspection can be lightened. But there is no question at all that under any system we shall want more trained inspectors than are available at the moment. We make two suggestions on that. We make a suggestion as to the collection of information by the Board itself, and we make a suggestion as to the nature of the tribunal through which there shall be enforcement.

12,307. *Sir Arthur Pease*: But without inspection cannot the individual tell he is not being paid the right wage?—Of course he can in most cases. Sometimes it is a little bit difficult in a piecework case for even the worker to know whether he is or is not being paid less than he is entitled to, because what is looked to—as I explained last time—is not the earnings of any particular worker, but the nature of the piece-rate as a whole. On that large matter the individual worker does not know whether the piece-rate as a whole is paid or is not, and there you have to get an outside authority. (Miss Symons): Also I think the fear of victimisation would deter large groups of unorganised workers from making a complaint. They would be afraid of losing their work if they made a complaint; whereas under this system, if there is inspection the complaint does not come direct from them. In the case of unorganised workers, I think that is the only way you can get the rates recognised.

12,308. *Chairman*: The remedy for that is more organisation?—Quite.

12,309. Mr. Poulton: But it does not prevent them now from making complaints to you?—(Mr. Mallon): We have a complaint form, and we send these out through the various Unions which are affiliated to Congress. The organisers can get these forms in

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

large numbers. Where there is any complaint they are asked to send one of these forms to the worker. The complaint forms are very carefully drawn up. Then they are collected. We hope that that will save a good deal of the Inspector's time, because he will go down to investigate something on which he has definite information.

12,310. *Chairman*: I think that some suggestion has been made that complaints might be made to the Labour Exchanges?—I do not see how the Labour Exchanges could effectively intervene.

12,311. *Dame Adelaide Anderson*: What is really wanted, is it not, is that the complaint should get as quickly as possible to the sufficiently experienced Inspector?—That is so.

12,312. So that it might be a circular sent to the Inspector?—Yes.

12,313. Would you say that one trained inspector is more than two half-trained inspectors?—I would put it very much more highly than that.

12,314. And that the all-important thing is gradually to increase—not by jerks, but steadily—the number of trained inspectors?—Yes.

12,315. You do not want to water down too rapidly the trained inspectors?—That is so. I agree entirely with the point which has been raised as to expense. Criticism in that connection would be modified a little if the wide range of work these inspectors cover and their general usefulness, not only in enforcing rates but in helping employers, were considered. If you call one of the inspectors with wide experience, and ask him to explain the way in which, for instance, minimum rates were introduced into the shirt trade in Ireland, or when minimum rates were introduced into an entirely disorganised trade like that of paper bags in this country, you will find he will give you, without difficulty, any number of cases in which he was able substantially to help the employer to achieve a much better organisation of his factory. That is one aspect of the work of these persons which has not received anything like adequate recognition. They are by no means mere policemen; they come into a factory without any intention to put the employer in the wrong. They go in to see that a certain industrial condition exists, and if it does not exist, to aid the employer to bring it into operation. Not once, but many times employers have written to the Trade Boards to acknowledge the debt under which they have been placed by the highly expert advice they have received from the Inspectors. (*Miss Symons*): I think one must say, to be truthful, that the half-trained inspector actually does more harm than good. Meeting employers all over the country, I think that people of the wrong kind and people of the wrong experience who were brought in to make up the deficiency in inspectors under the Trade Boards, did more to irritate employers against the system than anything else. The period during which they were brought in, I think, shows the effect of their introduction.

12,316. *Dame Adelaide Anderson*: But you cannot have a ready-made trained experienced inspector?—(*Mr. Mallon*): That is so.

12,317. You must always be adding steadily, and an untrained inspector can do certain work that is useful—though, perhaps, not the highest class of work—in acquiring knowledge. The gist of the matter is to bring in untrained people of a suitable kind so as not to overwork the trained inspector?—(*Miss Symons*): Clearly. I meant to say that they must be of the right kind. You must not decide to have a less experienced type of inspector.

12,318. *Chairman*: It is really in connection with piecework that the main difficulty arises, is it not?—(*Mr. Mallon*): That is the main difficulty; but, of course, the identification of classes where special classes exist, and a great many other such matters, are very important.

12,319. *Mr. Poulton*: There is the question of overlapping?—Yes. It is not possible, as Dame Adelaide Anderson will know, to divide the work of an inspector into simple duties and less simple

duties. The inspector goes round when a trade is scheduled, and his duty may be to see that notices are posted, or something as simple as that; but he goes into a factory, and then the employer has been thinking about the matter and he has a number of questions to ask. He asks the inspector to advise him on all sorts of important points. If the inspector does not know the Act and the Trade Boards very thoroughly, it is quite likely he will give wrong advice.

12,320. *Dame Adelaide Anderson*: That is the trouble. At any moment a difficult problem may be sprung upon the inspector?—Yes.

12,321. But you can only meet that by steady training?—That is our view.

12,322. And trying as much as possible to utilise the experienced inspector and not those who are acquiring the knowledge?—Yes.

12,323. *Mrs. Lyttelton*: I suppose judgment has to be continually exercised as to whether the failure of the worker to produce what is expected of him is due to a lack of organisation, and the wrong sort of machinery, and all those sort of points?—Yes.

12,324. It is very complicated?—Yes. Most of the inspectors know the trades very well, and they can pronounce on these matters much more readily than you would suppose. They do it—and that is the great thing—with the approval of the employers in the trade. It is notable that so little complaint has been made in respect of the work of the inspectors of the best class.

12,325. *Dame Adelaide Anderson*: Is it not possible to retrieve any of the experienced inspectors who disappeared?—I do not know if it is; I am afraid it is not. There is just one other remark I would like to make. I think that the problem of inspection does get lost sight of as time goes on in a trade that has been under the Act for some time. If you looked into the figures you would find that inspection in the wholesale tailoring trade is a very much less serious problem than it was when we began. The employers have settled down to it. The Employers Association is behind the rates, and they are looking out, as well as the worker, for any case of evasion. We have complaints from employers if there is any reason to suppose that evasion is taking place. For all those reasons—because the employers are working to detect evasion, and because the trade has settled down to the new conditions and does not want to evade, you get the job of inspection very sensibly lightened.

12,326. *Mr. Bell*: Do I take it, Mr. Mallon, that you are of opinion that the decisions of the Trade Board could not be effectively carried out without some elaborate system of inspection?—I do not think anything elaborate need be contemplated, if by elaborate you mean something complicated. But certainly you do want a sufficiently numerous body of competent Inspectors; that, I think, is essential.

12,327. What you have in mind evidently are Inspectors of the same type as are appointed under the Particulars Clause of the Factory Act?—Of the same type as Factory Inspectors.

12,328. Do you think that those Inspectors could carry out their work without the assistance of the well-organised workpeople in that industry?—Yes; they can and do. Where there is organisation, that is all to the good, and it helps appreciably. But in lots of trades in which there is no organisation, or no organisation to talk about, like lace finishing in Nottingham, these Inspectors do perform their duties, difficult as they are, with very great success.

12,329. In the case of any alteration in an elaborate system of piece-rates how is the Inspector to obtain his information as to the alteration that is taking place and the exact effect on the earnings of the workpeople?—The Inspectors have been very good in all those respects. The rapidity with which a trained investigator can master the technique of a trade with which up to a given date he has been unfamiliar, is remarkable. As a matter of fact, the investigation of the Inspectors has thrown a light which

15 February, 1922.]

Mr. T. J. MALLON and Miss M. J. SYMONS.

[Continued.]

the employers, in some cases, have benefited by, on the organisation of various trades. I remember how during the war we had a report on the question of finishing. Flat rates were fixed for the making of army clothing, and it was attempted by the War Office to see that rates of wages for this work were substantially the same. That meant an investigation of the processes of the trade, and an Inspector was asked to report on what was included in the process of finishing army clothing. It appeared that finishing meant any one of about 12 things; the finishing process was carried on in so many ways. This was news to the employers, who all supposed that finishing was a generally understood term. It was not. Behind the term were very large diversities of practice.

12,330. *Mr. Poulton*: That means they were restricted in their idea of finishing to their locality?—Yes.

12,331. *Mr. Bell*: I see that you suggest some method. Suppose that you have an Inspector who receives his information, say, from a Trade Union official, and the Trade Union official knows that certain breaches are taking place by a certain employer, and he sends that information to the Inspector. Is it not a waste of time that the Inspector then has to verify it, if that evidence could be produced either before magistrates or some tribunal such as you suggest?—Yes, if it were as obvious as that; but in fact it does not tend to be quite so clear. You get an allegation that a piece-rate does not conform to the determination of the Trade Board, and that does call for very careful investigation. It is that type of complaint that takes up most of the time of the Inspectors. The question of time-rates is of course very much simpler. If you have a worker of a given age and of a given occupation who is getting 20s. instead of 30s. a week, there is not much trouble about it.

12,332. But the question even of piece-rates is only a question of fact, is it not?—Yes, but a very elusive and difficult fact.

12,333. *Mr. Poulton*: But is it not sometimes a question of conditions?—Yes.

12,334. Because the organisation may be such that they cannot earn the money, whereas under proper organisation they could earn the money?—Yes. There was a case of an employer in Londonderry whose piece-rates were satisfactory, but who had a defective dynamo, I think it was. As a result of that, although the piece-rate was right, the employees were getting very little money. The employer was twice warned, and as he failed to bring his machinery up to date he was prosecuted and fined heavily.

12,335. *Mrs. Lyttelton*: Would you say generally that the more organisation there is amongst the workers and employers, the less inspection is necessary?—Certainly.

12,336. *Sir Arthur Pease*: Would not a worker, if he or she found he or she was paid the wrong wage, go to the employer and complain?—In many cases I think, especially in a time of stress like the present, you would have many workers suffering a good deal rather than expose themselves to dismissal.

12,337. I have knowledge of some trades where the piece-rates are very complicated, and one of the rules between the Union and ourselves is that no worker may take any complaint before the Union till he has been before the Lodge?—(*Miss Symons*): That is where there is organisation. I was dealing with cases where there is no organisation.

12,338. It seems to me undesirable that people should run to some outside body before the complaint has been brought up before the employer directly?—(*Mr. Mallon*): We should entirely agree, and where there is organisation that is the course we advise.

12,339. *Mr. Poulton*: And would always advise?—Certainly.

12,340. *Dame Adelaide Anderson*: You would agree that in the worst places there is generally an obstacle to a complaint coming forward?—Yes.

12,341. And that it is rather where there is an idea that improvement is possible that a complaint comes forward?—Yes.

12,342. Is that the general rule?—Yes. Where there is organisation there is not much difficulty. We find if an employer on a Trade Board is opposed to some person whom he employs, there is freedom of discussion between those two persons. The man gets up and makes his complaint perhaps as to something which he says has occurred in the factory of his employer, and he is not in the least prejudiced. That is because it is a trade in which organisation is accepted by the employer, and there are good relations between the two sides.

12,343. Then the function of the inspector is to search out the worst places and to advise as to better organisation?—Yes.

12,344. That is his chief function?—Yes.

12,345. Apart from the possibility of taking proceedings?—Yes.

12,346. *Mr. Poulton*: You attach considerably more importance to the question of machinery than to the question of a prosecution?—Yes. We do not want a prosecution if we can get the result in any other way. Prosecution is a nuisance. There is just one other thing I want to say. It may be put—I do not know—that the question of effective enforcement has to do with the drawing up of rather elaborate schemes of rates; that in so far as the scheme of rates is elaborate, there is difficulty of information. In general, of course, one must admit that; but what one says is that the Boards very speedily learn. If you look at the way in which determinations have altered during the last 12 months, you see the Boards can be trusted to learn, and if their scheme of rates proves to be over-elaborate, or to give difficulty to the inspectors who have to enforce them, the Boards soon learn that, and re-arrange their determinations accordingly, and that difficulty is altered or removed. I think the best line to take is to let the Boards learn by experience.

12,347. *Sir Arthur Pease*: Would it not do to have simple piecework basis rates as minimum rates, and say that a normal worker must have a rate giving that sum?—That is what we do in most cases as regards piece-workers.

12,348. And leave the actual definite rate to be fixed locally?—That is, to have a piece-rate for the particular factory?

12,349. Yes.—That would involve very great difficulty.

Sir Arthur Pease: On the piecework basis rate. Say the time-rate was 1s., the piecework basis rate would be 10 or 20 per cent. more, and it would have to be shown that the normal worker in that group of factories, or whatever it was, could earn that piecework time-rate, and leave out all these complicated rates altogether.

Mrs. Lyttelton: Above it you mean?

12,350. *Sir Arthur Pease*: No—the fixing of these complicated rates?—(*Miss Symons*): You mean as against general minimum piece-rates.

12,351. *Chairman*: Is that not where the Inspector's work is most complicated?—(*Mr. Mallon*): That is so.

12,352. For that purpose he has to make all kinds of tests?—Quite. Where the Board can simplify his work by drawing up a complete set of piece-rates for the whole trade there is relatively little difficulty.

12,353. *Sir Arthur Pease*: Would not a piece-rate that was quite fair in one factory where they have got everything up to the scratch have to be quite different in a factory which was not quite up to the mark?—That in certain trades is quite true.

12,354. How would that be dealt with on the Trade Board?—A Board has a discretion, and if the Board were one in which it would not be desirable for any reason to fix a general minimum piece-rate, as has

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

been fixed in the brush and broom trade, the Board would refrain from fixing such a rate. In the wholesale tailoring trade we discussed the fixing of general minimum piece-rates years ago, but we found that there were such difficulties of organisation between the different factories—precisely the difficulties to which you draw attention—that we gave it up. (*Miss Symons*): It may interest Sir Arthur Pease to know on that, that on the Laundry Board the employers have asked the Board to consider fixing general minimum piece-rates, because they submit that the difficulties of inspecting the piecework basis time-rate and of knowing whether the piecework basis time-rate is paid is so great, that the problem would be simpler by fixing minimum piece-rates. A request has come from them to that effect. They feel it would be much simpler and that they would know where they were. (*Mr. Mallon*): An employer under the Act has always the right, if he finds his circumstances are in any way peculiar, to require the Board to fix a special piece-rate to apply to his workers, and he has done so in several cases. There is one employer in Hampshire who keeps a factory of a particular kind in which the workers are mostly married women who come in at such times as they can spare. It would be unfair to enforce minimum wages there, because you do not know what time they put in. He applied for piece-rates to be fixed for his factory. They were fixed, and they operate without any friction.

12,355. What is the procedure you would have to adopt supposing a new machine were invented which could do 50 per cent. more work? Would it be a long process to adjust matters?—There would be no difficulty at all. We should not know of the coming in of the machines if we had fixed a piecework basis time-rate.

12,356. I mean if he had got an actual piece-rate fixed?—Then of course there would have to be a modification of the rate; but that might be done very quickly.

12,357. *Chairman*: In the meantime, the basis would remain?—Yes.

Sir Arthur Pease: And then the man would be earning 50 per cent. more, and he would feel very hurt at being put back?—As regards the Trade Board, the employer would have to see that in the new conditions the equivalent of the piece-work basis time-rate was earned. As regards the Trade Union, the difficulty, I think, would not arise, because the employer, before ordering the machine, or as soon as he had ordered it, would get into touch with the Union, and there would be negotiation and an agreement.

12,358. Outside the Trade Board?—The Trade Board would ratify it as soon as it was put to them.

12,359. *Dame Adelaide Anderson*: But take the case where there was no Union?—As the general minimum piece-rate would not apply in the new conditions, the employer has only to see that the employee earns the equivalent of the piece-work basis time-rate. If a modification of the general minimum piece-rate were desired the thing would come down to the Trade Board. It would not be quite so expeditiously dealt with, but it would be dealt with without unreasonable delay.

12,360. *Mr. Poulton*: But the officials in the other case would make tentative arrangements pending a settlement by the Board?—Yes. In trades where those changes occur, the Unions are in touch constantly with the employers.

12,361. *Chairman*: I think we will now leave inspection. You have something to say about a tribunal for enforcing the Act?—Yes. The difficulty we have to meet is that the Trade Union secretary and the Trade Union organiser has at present no *locus standi* under the Acts. He cannot intervene; he cannot take a case. The worker herself or himself can of course act in his or her own person, but this is done under very great difficulty. The worker does not know very much about the presentation of a case, and in the Courts he is dealing with persons whose language, being legal, is not his own. In those

ways, the courts, as we know them, do not seem to us to be the best authorities for the administration of Trade Board rates. We have to consider if there is any other machinery which might take the place of the courts. In that connection, we considered what was done during the war by the Munitions Tribunals. I think it is agreed that those Tribunals on the whole worked with very great success, and that they pleased both parties. There was an informality about them which was valued very much by workmen and workwomen.

12,362. *Mr. Poulton*: Is it not valued by the employers, too?—It is valued very much by the employers. Before these Tribunals it was possible for the Trade Union representative, or for the worker himself, to plead, and he was pleading before some body who were familiar with his complaint and who understood what was the matter. If we could get similar machinery for the enforcement of Trade Board rates, a great deal of the present difficulty would be removed. If such tribunals as that are set up, of course the question of their powers arises, and I contemplate Lord Cave's questions on the point with a trepidation which I do not disguise. But we are quite prepared to assent to the thing being put into the correct legal shape. It might be possible to attach such courts in some way which Lord Cave will understand, to the County Courts. We do not emphasise the non-legal character of the courts. All we are anxious about is that they should be informal; that they should be easy of access both to the Trade Union representative and to the actual worker, and of course should, both from the point of view of the country and the worker, be cheap.

12,363. *Chairman*: How many cases do you anticipate would come before a tribunal of this kind in a month?—You raise the difficulty that we saw. Obviously, I think you could not set up these courts merely for Trade Board cases; that would be an unreasonable request. I think, therefore, if the courts are set up it would have to be considered whether they could not deal with industrial questions generally—certainly with wage questions generally—questions arising under unemployment insurance and health insurance, and other similar matters.

12,364. There would have to be a whole network of these tribunals to cover the country?—I do not know how many tribunals would require to be set up. I do not think a great number would be necessary. It would not matter that you had one tribunal in a very wide area as long as access to it was to be obtained in this ready way.

12,365. *Dame Adelaide Anderson*: May I ask for information whether this new sort of body is meant simply for the recovery of wages or for the conviction of employers for criminal offences against the Act?—This court would only have the power to fine. It would not have the power to do anything more than inflict such fine as is provided in the Act. It would have the power to do that. Of course there would be an appeal, I suppose, from courts of this character to an appropriate tribunal.

12,366. Would it be possible to have one or two industrial assessors sitting with the magistrates to add what is required in the way of knowledge?—You have, I think, a deputy to the Judge of the County Court, and I thought that that deputy might possibly act as the centre of this new tribunal.

12,367. *Chairman*: There are two different organisations. Minor criminal charges are dealt with at petty sessions courts where magistrates sit. County Courts only deal with civil cases. One must not mix up the two?—Quite. I would be willing to put the magistrates and the petty sessions out, speaking for myself, and get these matters referred either to some such machinery as is here indicated, or to something that, in my phraseology, would be a sub-committee of the County Court.

12,368. Would you give to this Tribunal power to inflict fines?—Yes.

12,369. What about imprisonment?—I do not think there would be any question of imprisonment; if the

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

Court has the power to fine more and more heavily for repeated offences, would not that be all that is necessary?

12,370. There must be some power to enforce fines, otherwise the fines would never be paid?—Yes, that is so.

12,371. Would you also give this Tribunal power to award arrears?—Yes.

12,372. Without limit?—Yes.

12,373. Appeals from Magistrates go to Quarter Sessions, except in a case where a case is stated for the opinion of the higher Courts; on the other hand, the County Courts only deal with civil matters; to which Body would you appeal from this Tribunal?—I would rather not say anything on that very difficult subject; I think it is rather for you, if I may say so. I think there would have to be a machinery of appeal, and I do not think if the Deputy were presiding over the Court to which I have referred, either the County Court or the High Court would be precisely right.

12,374. Is there anything to justify the setting up of this large number of Tribunals, whose members I suppose would have to be paid, and which would require the machinery necessary to work it?—Yes, I think the number is very important, but I should not desire that these Courts should be created all over the country, at any rate immediately, and I should not desire that they should be set up at all unless it were found that they were to be useful for other purposes. It was my view, seeing, as I understand, that at present the various kinds of Courts are overlaid, that there might be a gradual transference from those Courts of less serious matters, and the Judges and others might be free to deal with cases of a higher level of importance.

12,375. What kind of matters? If it was a question of wages they would go to a Petty Sessional Court?—Yes.

12,376. What matters would you transfer to this Tribunal?—I have in mind any case which arises under the Acts I have mentioned, the Trade Boards Acts, the National Health Insurance Act, Unemployment Insurance, and possibly Workmen's Compensation.

12,377. Mr. Poulton: And the Factory Acts?—Yes.

12,378. Chairman: Workmen's Compensation is a very important jurisdiction?—That is rather more difficult, I agree.

12,379. Sometimes it involves very large sums?—Yes.

12,380. Mr. Bell: Do you know any reason why the Trade Board itself should not deal with these cases?—In many ways there is a good deal to be said for that, but of course it is an entirely new proposal, and its novelty if nothing else would probably condemn it.

12,381. The Trade Board itself decides what rates should be paid, does it not?—It fixes the rates.

12,382. And on that Trade Board there are supposed to be men and women on both sides who know the conditions in that particular trade?—Yes.

12,383. What Tribunal would be more efficient than the Trade Board itself which has fixed the rates?—I think some such Tribunal would probably be accepted by a great many employers; the members of the Association probably would be very glad to have a Board of that sort to deal with complaints. But supposing you had a great number of employers outside an Association, and possibly at feud with the Association, they would not desire that a case of an alleged offence involving them should go before a Tribunal which they would either believe or say they believed was biased.

12,384. But the same objection, of course, applies that the employers could not be taken to the Tribunal itself fixing the rates if they were not members. The Trade Boards fix the rates. If there is a breach of the rates that they have fixed, are you not of opinion that the Trade Board itself could be that Tribunal?—Well, the Trade Board has been set up with quite different functions, and I think it would be a very drastic step to invest it with punitive powers.

12,385. In a well organised industry where you have, say, a Joint Board—you do not call it a Trade Board, you have a Joint Board—if there is a breach of the rates agreed upon what takes place then in that well organised industry?—The employer who is alleged to have broken the agreement is reported to his Association.

12,386. And then brought before the Joint Board?—Yes.

12,387. Who decide whether he is right or wrong? Is not the Trade Board supposed to be in a somewhat similar position to the Joint Board of a well organised industry?—As you perceive that is a very different case. In the organised trades you get an acceptance of that machinery by all the parties concerned, and the acceptance of that machinery involves the acceptance of this particular procedure which you are emphasising. It is rather difficult, of course, to contemplate that the Trade Boards should have, without the consent of anybody, the power to impose fines on employers who are alleged not to be carrying out its determinations.

12,388. I am not going so far. I was trying to get at the position that there is a breach and as to whether the Tribunal that you suggest should not be the Trade Board which itself should be satisfied whether there is a breach or not, and that the Trade Board should then decide what action should be taken against the employer who has committed the breach?—Other considerations apply. I do not think we should make very good judicial bodies. I think that would reveal one of our weaknesses.

12,389. Chairman: You are not appointed for that purpose?—No.

12,390. Mr. Poulton: Instead of setting up machinery would not it be desirable that in all cases which may have to come before the Courts the Courts in particular cases should have competent Assessors with them?—Yes.

12,391. The great difficulty is, is it not, that the members feel that the bench has not that competent knowledge technically of what importance is attached to the case which may be before them?—I think that is just it. The pleader is a lawyer who has only a very general knowledge of the Acts; he has a number of cases; he cannot perhaps give this particular case the consideration that is due to it, and the point is not clearly apprehended by him and is not clearly put by him to the Bench. The Bench is similarly uninstructed and you get, as you have got in many cases, failure on the part of the Court to comprehend what is the precise point of dispute?—(Miss Symons): I think there is another difficulty, and that is the difficulty of expense in the present procedure. I mean that with a Munitions Tribunal or with any court on the lines that we are suggesting the worker or his Trade Union representative would be able to come before the Tribunal and plead the case, which would not be expensive. It would not deter the Union from taking the case on the ground of expense, and it would not deter the worker from taking proceedings as some of them are deterred now. In our view that is one of its great advantages if it could be done.

12,392. Mr. Bell: Did I understand you to say that the Trade Boards are only appointed to fix rates?—(Mr. Mallon): Yes, and other things connected therewith.

12,393. And that the Trade Board which fixes the rates has nothing whatever to do with seeing that the rates are paid after they are fixed?—I did not say that. Of course they have a general duty of seeing that the rates are enforced, but that does not extend to acting as a Court in regard to a question as to whether a breach of the Act has in fact occurred or not, or as to the extent of that breach.

12,394. Mr. Poulton: That is the administrative side, whilst the point raised is a judicial one?—Yes.

12,395. Mr. Bell: You have one body which you can call a Trade Board or you can call it a Tribunal, if you like, which fixes the rates, and then you are advocating bringing in another Tribunal to see that

15 February, 1922.]

Mr. J. J. MALLOTT and Miss M. J. SYMONS.

[Continued.]

those rates are paid. Why is that?—You have to think of the fitness of the instrument. After all, if one is going to administer the law one must know something about it. On a great many of our Boards we have not anybody who has any knowledge of the law, and for that reason, if for no other, we should not be competent to discharge a purely judicial function. I wish that the Trade Boards were effective for all these purposes; nothing more would rejoice me than to sit in judgment upon a great many persons.

12,396. I think you will agree that they have an intimate knowledge of some of the most elaborate piecework rates in the country?—Yes.

12,397. But this is a question of fact simply as to whether the rates are paid or not and the Trade Board has fixed the rates after considering the work and the conditions. Surely no other tribunal can claim to possess such knowledge of the rates and the conditions as the Trade Board which fixes the rates?—In Lancashire, of course, you have a state of organisation, in some respects, almost ideal, and you really cannot generalise from the example of Lancashire. You cannot refer from Lancashire to some of these very different trades under Trade Boards. Just think of a Trade Board: the members are partisan to a large extent. You have your workers and your employers. It might be that in a great many cases of this kind there would be violent differences; the employers would hold unitedly to one view, and the workers would hold no less unitedly to another view. Does that mean that the Appointed Members of the Trade Board are appointed in a judicial capacity? They would disclaim that capacity; they would not want to add it to their present burdens and worries. I do not think, if I may say so, that is feasible. I think if you had an organisation like the Lancashire organisation a different answer might be possible, but it would not be in this case.

12,398. Perhaps the only question would be was this employer carrying out the decision of the Trade Board?—Take Lancashire; you have your recognised piece lists. A question of that sort can be very swiftly determined, but it cannot be determined in the trades with which we are dealing, trades which have no established piece-rates at all, and in which you have to investigate with respect to every piece payment before you know whether a rate is proper or not.

12,399. The question as to whether a rate is proper or not would have been taken into consideration before the rate was fixed. I thought we were dealing with what happens after the rate was fixed, and as to what steps should be taken to see that that rate is paid when it is fixed?—When a piece-rate is fixed by an employer which purports to conform with the time-rate or the piece-work basis time-rate, the question of its sufficiency arises, and it is just that as to which there is difficulty. I think there would be lots of rates of this kind fixed by employers which would involve disagreement on the Trade Board. (*Miss Symons*): I do not know whether you think it worth while going into, but there is one point on our suggestion which perhaps does not emerge quite clearly, that is that presumably sometimes these tribunals would come up against questions of scope; I mean an employer would be prosecuted for not paying a rate, and he would argue, in fact, that the work that these workers did was not covered by that particular rate or was covered by another rate. On that, the reasonable suggestion, we think, is that that should be dealt with just as the problem was dealt with by the Munitions Courts, that if they were merely faced with a breach of the rate and no difference as to what was the rate, they could deal with it if there was a difference as to the appropriate rate; it was referred back to a special arbitration body, and in the same way, if there was a difference as to the rate on a question of scope, that

question should be referred back to whatever scope tribunal you eventually decide upon.

12,400. *Chairman*: I suppose the appointment of working men as magistrates tends to increase the general confidence of workers in industry?—(*Mr. Malton*): Yes, I think so.

12,401. *Sir Arthur Pease*: How would it do for the magistrates to have the power to refer this to some body to go into if there were these very technical questions?—I think any suggestion of that sort is on the right lines. What we want is somebody who is familiar with the trades so that he apprehends at once, and without a lot of legal argument, the nature of the issues involved, and if he is dealing with that kind of case frequently, then he is almost certain to come to the right sort of decision.

12,402. What I have in my mind is, say, where the High Court send the matter to a Referee to go into the details and to have a report?—Yes, I should like to think about that; it seems to me a good suggestion.

12,403. *Chairman*: I think we understand that point now. May we now come to the question of "Slow workers." It has been suggested to us by many witnesses that power should be given in regard to certain trades so as to enable a Trade Board or its Administrative Committee to grant permits to slow workers. What do you say to that?—I do not think it is workable. I think where you have a system of issuing permits to workers who have a definite physical infirmity or injury or are obviously very old, that is a definite ground, and you can proceed. But if you are vaguer than that you may have all sorts of persons or their employers coming forward to request permits, and you have no grounds on which you can issue those permits, no definite grounds. The difficulty is that you tend to create inequality of treatment. One employer may bring a number of workers forward and he gets certificates in respect of each of those workers; some other employer who is competing with him does not do that, and he is paying higher wages to workers who are comparable with the others.

12,404. Could you trust the Trade Board to deal with that?—I am not sure that it is not beyond their power. I should like to look a little more carefully than I have done at the experience of the Agricultural Wages Board; they had a wider system of issuing permits, and it was attended with considerable difficulty. (*Miss Symons*): It varies so much in different trades. I am concerned with some Trade Boards where we get very few applications for permits and where it might be possible for the Administrative Committee, as you have heard from other witnesses, to investigate every case very carefully. On the other hand, I have dealt with permits from other Boards where I do think it would be impracticable. Just recently I have talked the matter over with several employers on such Committees and asked them whether they thought we could possibly deal with cases of slow workers if this additional power were granted to us, and in a great many cases they have agreed with me that we could not; we should not have the machinery at our disposal to investigate the cases of that kind properly.

12,405. Could you not set up local machinery?—I think in some cases it would be a most enormous problem, and you would have the serious risk of undermining the rate.

12,406. On the other hand, I suppose there is the great risk, if you make no such provision, that the worker who is not under any physical disability, but is still constitutionally slower than other people, may lose his place?—I think not in most trades, because where that arises they put the workers on piecework.

12,407. *Dame Adelaide Anderson*: Are not there some industries where another system is imposed, that you simply cannot put the pieceworker on a rate and let him remain at that; they have to get to a certain level?—(*Mr. Malton*): If a worker can be employed on piecework there is no question of the issue of a permit.

12,408. Not in any industry?—No, not in any industry under the Act.

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

12,409. There has been no scale fixed that prevents that operating in the case of a slow worker?—Are you thinking of the guaranteed time-rate?

12,410. Yes, that has been the point put forward?—I think there is only one trade in which that guaranteed piecework has been adopted, and I am not sure how far it is in operation at the moment. I do not think that has been a difficulty.

12,411. *Chairman*: There are trades in which there is not and can be no piece-rate?—That is true.

12,412. Like the distributive trades?—That is true.

12,413. You cannot provide for the slow worker there by putting him on piecework?—No.

12,414. *Mr. Poulton*: Supposing a basic rate was kept intact, there is no reason, is there, why it should not be sufficiently widened for those abnormal cases to be dealt with?—When cases of that sort are referred to the Board the Board does not, I think, stand too nicely on ceremony. If it is satisfied that a case is made out that the worker is for some reason not normal—it does not worry too much over the words of the section—it gives a permit. But the consideration that lies behind all this, I think, is that both sides want as far as possible to get rid of the sub-ordinary worker—I mean in an entirely painless way. You do that by preventing people who are not fit for an industry from getting into it. What we are doing gradually under this Trade Board system is to have a test applied to any young worker who seeks to enter a particular trade. Generally no question is asked for a month in all the trades where we have the system of issuing certificates for learners, and in some cases for longer. During that month the employer has a chance of ascertaining through his representatives, the Welfare Worker or whoever it may be, whether the worker is really fit for that trade. If the girl is not fit for that trade then she is turned away, and it is good from every point of view that she should be. In this way, in this entirely painless way, we are getting rid of the ordinary worker difficulty.

12,415. *Dame Adelaide Anderson*: She has to find some other trade?—Yes, she has to find some other trade; she is removed to something which is more appropriate to her. In the past no test of that sort was applied, and thus a very large class of sub-ordinary workers was brought into existence. There may be here and there some present difficulty and possibly some little suffering—I do not say that there is not—but I am sure that the effect of the Trade Board machinery, if you take a long view, is to prevent the slow worker from being created.

12,416. *Sir Arthur Pease*: Where does she go to?—That is a question almost always of the suitability of the trade. If you take a worker who has previously been fit for some manual employment, and put her into a trade in which she has to work with her head, she is not very good. At present there is no attempt really to suit people to their jobs, and all kinds of people do get into the wrong trades.

12,417. But the man or woman I am thinking of is a man or woman that nobody would want in any trade or any occupation unless they could get him or her at a considerably lower rate than is the ordinary rate of the trade. Are you going to shut those people out from employment altogether?—No. If the case was as plain as that then there would be something specifically affecting the man or woman and that could be made the subject of an application.

12,418. *Mr. Bell*: Is there any reason why this class of worker should be driven almost entirely into certain industries. What I mean is this, and I think *Sir Arthur Pease* will agree, that in the well organised industries of the country no provision whatever has been made for slow workers?—Quite.

12,419. *Mr. Poulton*: Oh yes, there is.—In some instances it is true.

Mr. Poulton: We are fairly well organised and we have always made provision for them.

Chairman: How do you do it?

Mr. Poulton: We have an agreed permit.

Dame Adelaide Anderson: For some particular type of worker?

Mr. Poulton: For any type, but the basic rate must not be endangered.

Chairman: But the Trade Boards would see to that.

12,420. *Mr. Poulton*: Yes.—(*Miss Symons*): I must say that in our own trade we usually have agreements embodying the wording of the Trade Boards Acts as a clause in the agreement and we deal with it in very much the same way as it is dealt with under the Trade Board.

12,421. *Sir Arthur Pease*: What about old age which is allied to it? Would you agree that people after a certain age should be excluded from the Trade Board rates?—(*Mr. Mallon*): There is no particular virtue in an age test. But if a person is too old for his job that is a point that the Boards must take into consideration.

12,422. They have not that power at present, have they?—Yes, they construe the words of the "permit" section to cover cases of age, and as a matter of fact we have issued a great number of permits in many of the Boards on account of age.

12,423. I thought we were told that they could not do that unless a man or woman was physically unfit?—Infirmity is pre-supposed. An employer writes and says: "I have a woman working for me and she is 73 years of age and she is not able as other workers are to perform her duties, but I think that a wage of so much would be appropriate to her."

12,424. *Mr. Poulton*: Would you with your large experience elaborate that point because I do not agree with the interpretation which has been put upon that clause of the Act by a number of witnesses because I hold that the word has a wider meaning. I should like to have your experience?—We have construed those words in a large way, and in a case such as I have supposed it may be that neither side is satisfied on the statement of the employer that a permit should be issued. If we are not satisfied, if we think perhaps that the disability of the worker is over stated, then we ask a local employer or a local worker (we do not stand on ceremony) to look into the matter and report and he does that. If there is still room for dissatisfaction, and that is very rarely the case, then we wait until a Trade Board Inspector reports. But the worker is not prejudiced by that because we allow the employer to have a permit *pro tem* or else we simply do not deal with his application.—(*Miss Symons*): Certainly on any of the Boards of which I have been a member we have treated the word "infirmity" in the section of the Act to cover old age, and I should say that the greater number of permits which we have granted on all the Boards that I have been connected with were granted to people where the infirmity has been old age.

12,425. *Chairman*: Would there be any danger in enlarging the power so as to enable the Board to grant a permit if by reason of any infirmity or physical injury or for any other reason a worker is incapable of earning the minimum wage?—(*Mr. Mallon*): I do not think I should very much demur to those words being inserted, but the case against the insertion of them is the case I have already mentioned, that it might possibly create inequality of treatment as between different employers.

12,426. Of course you have to make the word "incapable" emphatic?—Yes, I appreciate that. In so far as you make employers feel that one is getting different treatment to another you upset them.

12,427. But it is the Board which would have to settle it, not the employer?—That is so. But imagine a number of employers outside the Board, and they have in each of their factories a number of old people, then if one has no difficulty in getting certificates for his people and the other has there tends to be trouble.

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

12,428. They might be in different trades you mean?—Or in the same trade.

12,429. They would have the same Board?—As long as we are held to these words physical injury and infirmity we are not likely to make a mistake because those words do constrain us. But if we are not constrained we might be in a more generous mood on one day and a more uggardly mood on another day.

12,430. *Sir Arthur Pease*: Human nature?—Yes, in short, human nature.

12,431. *Chairman*: Will you now deal with the paragraph about "Power to acquire information as to wages"?—That is a very important suggestion. There are two points. In the first place a Board is established and it has to fix rates for a trade which previously has had no such rates fixed. The Ministry provide the Appointed Members with a document, which, of course, is a secret document and which we do not see. In that document information is given as to the rates of wages that prevail in the trade and so on. But obviously that information cannot be sufficient because the Ministry can only get information as to wages just as I can get information by going to employers and asking for it; they have no right to demand information. That means that the Appointed Members are perhaps not so very well equipped for their job of deciding what the rate of wages should be and that the representative Members of the Board are not equipped at all, because the employers do not like freely to communicate their wages one to another. The information of the workers' representatives is frequently defective, and so far as we have made mistakes on Boards by fixing rates that are to any extent inappropriate, it has been due to the fact that our information was defective. I do not suggest that the information, if any, obtained from employers should be made public; but I think that it ought to be within the power of a Board, when it is established, to call for a wages return from an employer in its industry; that the figures in that return should be dealt with by the Ministry or the Secretariat of the Board and that the figure should be furnished in an appropriate form to the Members of the Boards. With a statement of wages to steady them it would be almost impossible for the Board to go wrong.

12,432. *Sir Arthur Pease*: You mean a schedule of the actual wages being paid at the time?—Yes.

12,433. All the wages in the board brought together in the form of statistics?—Yes.

12,434. Not to present the individual wages of each mill?—No. The statements, of course, would be furnished by each mill or each employer but the Trade Board would not see the statements in that form; all it would get would be a generalised statement as to various rates of wages which had been paid.

12,435. *Mr. Poulton*: Would not the measure of that objection be done away with if it was made beyond any dispute that the wages when they got into the hands of officials would be dealt with under numbers instead of by name?—Yes. I think if it was understood that the information was private and confidential just as the information obtained for the hours and earnings enquiry in 1906 was, the difficulty would be minimised. I have asked the Secretaries of various employers' Associations whether there would be any objection to a power of this kind being wielded by Trade Boards, and generally I think there is agreement that it would help the Boards and make it impossible for them to fix on ill-advised rate.

12,436. *Dame Adelaide Anderson*: You suggest that even if the power is given to the Trade Board it would be exercised through the Minister?—Yes.

12,437. They would ask the Minister to collect the information?—Yes, a Trade Board would have its own power and they would employ either their own inspectors or such people as the Ministry thought proper.

12,438. It would be very serious for an individual firm to appear by name before the group of the Trade Board?—Yes. That is the second provision. On one Trade Board, which I had better not

name, it was alleged by the employers that there was a great deal of underpayments in a particular area. They had asked the Ministry of Labour to make a special inquiry in that area. The Ministry of Labour, because of the deficiency of inspectors, was not able to make that inquiry. The employers protested very warmly against this state of affairs. We could not deal with the matter, but if we had had the power we could have asked the employers in that area to make a return of the wages which they were in fact paying. These individual statements would not have come before the Board, they would have gone before the Department, but the Department would have been saved the trouble of sending one or several inspectors down to the locality, and they would have known from the nature of the returns whether there was any reason or not to apprehend that an evasion of the rates was taking place. Those two powers I think in the first place would equip the Boards much better for their task than they are now equipped, and in the second place would facilitate and cheapen administration.

12,439. *Sir Arthur Pease*: Would you make that a continuing return or just ask for it once in a way?—It would be asked for generally from employers when the Board was set up. It would be asked for from districts or from particular employers as might be required during the lifetime of the Board.

12,440. *Mr. Poulton*: For instance, when you are proposing to vary a rate—Yes, it might be desirable then to have information.

12,441. *Sir Arthur Pease*: Because most firms in recent years have had some experience of returns?—Yes, I think that is so. I agree that, other things equal, the less trouble we give to employers in that way the better.

12,442. *Chairman*: Then you quote some resolutions and make some observations and then you support the majority report of the Trade Boards Administration Committee?—Yes. What happened with regard to that Committee was very significant and from one point of view encouraging. Practically all the Boards were represented at a deputation to the Minister of Labour. At that deputation there was little or no criticism of the Boards, and the view taken by the two sides was that if the Minister would make certain changes, he would have in the Boards and in the willingness of the two sides to co-operate an asset of great national importance. The Committee which was set up as a result of that deputation sat for a long time. It reached an agreement and was signed among others by Mr. Wolfe as representing the Ministry. We therefore had no doubt that the recommendations of that Committee would be adopted. Unfortunately the Minister refused to do as that Committee advised him, and the result has been in many ways serious. The Advisory Committee which we thought very important has not been set up because we thought it was no good setting up an Advisory Committee until other changes were made. The fact that the Boards and the Ministry of Labour have gone apart explains a good deal of the criticism which has been poured out on the Boards. A further explanation is that the dissatisfaction with the Boards is due very largely to the state of Trade. I can quite understand that in a time like this employers must be very anxious, or some employers must be very anxious, to get free of any restraint, and I think the protests to which you have listened are just a register of that feeling. But I might make the suggestion that an analysis of the action of the Boards would show that these suggestions were not as numerous or as weighty as might appear. I have been looking into the matter since last week and so far as I can see, if you leave the Scottish Boards and the Irish Boards, as to which I am not so well informed, out of account, 19 Boards are in favour not only of the Boards continuing but of the exercise by those Boards of the powers which they at present possess. I will put in a list of those 19 Boards. I reckon that some 4 or 5

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

Boards are in a condition of divided mind and that possibly 8 or 9 Boards are against the Board continuing to exercise the powers which they at present exercise. Of those Boards one is the Grocery Trade which has not so far brought any rate into operation, and 2 or 3 are Boards which have had very little experience of the operation of the Act. I do suggest that that analysis shows that the great bulk of employers under the Trade Board system are in favour of it; and I would most earnestly like to put to you and to the Committee that if anything is done to weaken the Boards and to detract from their powers there will certainly be a very great national loss. I cannot over-emphasise the extent to which, in certain trades, industrial relations have improved. On a number of the Boards we are working together as a team and there is a spirit quite new in the industry which holds out the most abundant promise for the future. All that rests on this power to fix rates of wages, not merely for those who are at the bottom of the industrial ladder, but for those who are higher up. We cannot have really satisfactory relations with these employers unless they are going to be able, along with the representatives of the workers, to draw up a scale of wages which they think to be fair and to see that that scale is imposed on the industry as a whole. If that power is conceded, under the shadow of it, a development of good industrial relations is possible, but not if that power is taken away. So that I do put it to the Committee that before anything, even the least power, is taken away from any Board it should be considered how much may depend upon the subtraction of that power.

12,443. *Mr. Poulton*: On that last point with regard to the analysis, the 10 Boards that you name, I should like to be informed if you can give me any information, because I do not remember any such number as that being in favour of abolition. I thought it was only a few in favour of abolition?—Not abolition; this is not an abolition list.

12,444. A number of them said that they would like them altered, but they were in favour of the Boards continuing?—Yes. This is entirely on the question of retaining present powers.

12,445. It does not refer to abolition at all?—Oh, no.

12,446. *Chairman*: Will you hand in that analysis?—Yes.

12,447. Have you taken it from the evidence?—I have taken it from my own knowledge of the Boards, but I will buttress it with the requisite evidence.

12,448. *Dame Adelaide Anderson*: Have you a figure for those who really do desire abolition?—I think there are hardly any if there are any.

12,449. *Sir Arthur Pease*: There is the jute trade?—Yes, there is the jute trade possibly.

12,450. *Mr. Poulton*: And the Birmingham people, the Hook and Eye people?—There were two or three cases so far as I have followed the evidence in which preference was expressed for a national minimum wage as against Trade Boards, but I do not think anybody was against regulation in any form.

12,451. *Mrs. Lyttelton*: I think the Rope people were?—No. They asked me to attend the meeting of that Board (I am not a member of it) to consider the question of the evidence they should submit to this Committee, and I was allowed to take part in the discussion. Mr. Buckpitt, who is a leading member of the Board, expressed his complete satisfaction with the Board—that was his view at the time—provided it was taken away from the Ministry of Labour.

12,452. *Chairman*: I suppose you are only dealing with the employers' sides?—Yes, I have assumed that all the workers' sides are in favour.

12,453. I think there was hardly any body of any importance which even suggested the abolition of Trade Boards?—No.

12,454. I mean my impression is that there has been a very strong consensus of evidence in favour of the anti-sweating powers of the Boards being retained,

but have you included in your list those bodies which favour confining the Boards to anti-sweating, and really keeping to anti-sweating functions apart from wage-regulation?—Yes, I have treated all those trades which desire that the Board should be limited to the fixing of anti-sweating rates as anti. The Boards I put into the positive list are the Boards which favour the retention of present powers. I think in the list I can show 19 or 20, probably 20, trades. There are some trades which I have not put into any of these categories, because they have not given any evidence at all, and I do not know what their mind is.

12,455. I suppose an employer who is on a Board has rather a tendency to support it than an employer who is not on the Board?—Yes, I should say that was true in general, but I should explain it by saying that he knows more about the matter than the man outside.

12,456. *Mr. Poulton*: With your long experience of these Boards, right from the inception of the first Act, would you say, on the whole, apart from the question of raising wages, they have been beneficial to the country?—I think there is no kind of question about that. I should like to put this in. It is a letter which was sent to the *Star* on Thursday, October 6th, by a Mr. Duncan Campbell, of Messrs. Horne Bros. I put the letter in more readily because I have never met Mr. Campbell, and I did not know what his views were. He says what has happened in the wholesale tailoring trade. He says, for instance—he is talking of the period before the Boards were set up—"The best employers were undercut by the products of the sweat-shops. Gradually, but surely, the skilled workers were being forced towards the pittance on which fresh importations from Poland could live in some East End cellar. Disease and discontent were spread through the community. Did such conditions exist to-day, the East End would be solidly Bolshevik, and who could blame them?" But he goes on: "This shameful state of things was ended by the Trade Boards. Their minimum wage secured the workers against sweating, and at the same time protected all the decent employers against being undercut by the sweat-shops. The Trade Boards are an ideal method for the peaceful settlement of industrial troubles. In some respects they need altering, but their abolition means the return of the hideous sweating system"; and so on.

12,457. *Dame Adelaide Anderson*: Have you ever read Lakeman's account in the Report of 1893 or 1894, or thereabouts, of the shops in the East End?—Yes, I did.

12,458. There are lurid details given there?—Yes. The experience of that trade is the experience of a great many trades with which I have had to do, and I have seen these trades being cleaned up by Trade Boards; and it fills me with despair that anybody, with all this evidence before him, should take a circumscribed view of the work of the Boards.

12,459. *Chairman*: Have you anything to add, Miss Symons?—(Miss Symons): No, I have not; I agree with what has been said.

12,460. *Mrs. Lyttelton*: I want to ask you one general question. I understood you to say that you felt that District Committees on the whole very much encouraged organisation?—(Mr. Mallon): Not District Committees; I think the setting up of the Board has encouraged organisation.

12,461. I thought you said that when the workers had to put their case, or the employers had to put their case, before a District Committee, it tended to make for local organisation?—It may have helped a little bit, but I do not think that that is important. What I said was on the point of the failure or the non-success of the District Committees. Take the trade that Mr. Harner referred to. There is Mr. Healy on the one side and myself on the other. We were the spokesmen of organisations in the trade. Mr. Healy, when a District Committee was going to be held, of course, went down to the locality and had a local meeting, and I did the same thing. It followed that when the District Committee assembled, these two sides met, but they really had formed their view, and they said

15 February, 1922.]

Mr. J. J. MALLON and Miss M. J. SYMONS.

[Continued.]

whatever had been done already on the Central Board. I think, as most of you will realise who know organised trades, the very fact that there is organisation does limit the power of the district to say what it likes.

12,462. *Sir Arthur Pease*: As long as you do not give the District Board power to settle certain details within the general principles of the Central Board?—I agree. You mean that the major power should be exercised by the Central Board, but subject to that, you should allow a large liberty to the District Committee. I should agree to that, certainly.

12,463. *Mrs. Lyttelton*: Speaking generally, you would say that the Trade Boards encourage organisation?—There is no question about it.

12,464. Therefore, one could look forward to a possible time when, in certain trades, Trade Boards would no longer be necessary because there would be sufficient organisation dealing with the matter?—Yes, I think I would put it as high as that. I think you have to have regard to the fact that in many of these trades you cannot expect a continuity of organisation such as is possible in the trades in which men

are predominant. But subject to that, I say that I agree.

12,465. *Dame Adelaide Anderson*: Arising out of something you said to Mrs. Lyttelton just now, do you think the difficulty of women's wages in certain of the Trade Board industries may tend to decrease when there is greater facility for women to go into any trade?—Certainly I think so.

12,466. Limitation is perhaps the largest factor in depressing women's wages?—Yes, I think so. I should emphasise the importance of selecting trades for the employment of women. I should hope that women would get very much larger scope in trades like distribution trades, which are in many ways so suitable for them.

12,467. There should be a careful study made of suitable trades for women and a real, determined effort made to get them trained?—Yes, I should very much like to see that done.

Chairman: We are very much obliged to you, Mr. Mallon, and to Miss Symons, for your valuable evidence.

(Mr. Mallon with drew.)

(Adjourned for a short time.)

Miss M. J. SYMONS, recalled and further examined.

The Witness handed in the following statement:—

SUMMARY OF EVIDENCE to be submitted by Miss MADELINE J. SYMONS, Assistant Secretary of the Women's Section, National Union of General Workers, and member of the following Trade Boards: Boot and Floor Polish; Laundry; Ostrich and Fancy Feathers; Stamped or Pressed Metalwares; Tin Box.

Need for the extension of Trade Boards under the 1918 Act to trades not as yet covered.

The Women's Section of the National Union of General Workers comprises approximately 40,000 women members. Before its amalgamation with the National Union of General Workers in January, 1921, the Women's Section was the National Federation of Women Workers, founded in 1906.

As an organisation covering women workers in many of the lowest paid trades, the National Federation of Women Workers was vitally interested in the passing of the 1909 Trade Boards Act, and later in the 1918 Act. It had experience of the working of Trade Boards from the beginning, being represented on all the early Boards, and has now 92 seats on the following Trade Boards:—

Aerated Waters (England and Wales).
 Boot and Floor Polish.
 Brush and Broom.
 Button-making.
 Chain.
 Corset.
 Dressmaking and Women's Light Clothing.
 Flax and Hemp.
 Fur.
 Grocery and Provisions.
 Hat, Cap and Millinery.
 Hollow-ware.
 Lace.
 Laundry.
 Linen and Cotton Handkerchiefs.
 Hair, Bass and Fibre.
 Made-up Textiles.
 Ostrich and Fancy Feathers.
 Paper Bag.
 Paper Box.
 Perambulator and Invalid Carriage.
 Pin, Hook and Eye and Snap Fastener.
 Ready-made and Wholesale Bespoke Tailoring.
 Retail Bespoke Tailoring.
 Rope, Twine and Net.
 Sacks and Bags.
 Shirtmaking.
 Stamped or Pressed Metalwares.
 Sugar Confectionery and Food Preserving.

Tin Box.

Toy.

Wholesale Mantle and Costume Trade.

Waste Reclamation (General).

On all points the Women's Section are in entire agreement with the evidence and proposals to be submitted on behalf of the Trade Boards Advisory Council, and, in order to save the time of the Committee, they have therefore confined their evidence to the need for new Trade Boards and to certain matters arising from this question on which they feel particularly strongly.

On the question of the effect of Trade Boards on organisation, the Women's Section desire to state that it is their considered view, based on evidence dating from the setting up of the first Trade Board to the present day, that Trade Boards stimulate organisation and make joint agreements between Employers' Associations and Trade Unions possible in trades where otherwise such machinery could not have been secured. As instances of this tendency, the Cradley Heath chain trade and the hollow-ware trade may be quoted from the early Boards, and the button trade affords a striking instance among the more recent Trade Boards. Before the setting up of the Button Trade Board in March, 1920, the button workers in the London District were receiving about 16s. on timework and were earning on piecework from 10s. up to a maximum of 19s.-23s. At this date, the official figures for the cost of living were 130. Owing to the miserable conditions prevailing, it had been found quite impossible to organise these workers. After the Trade Board had fixed a minimum rate of 8½d. as from July 7th, 1920, over 90 per cent. of these workers in the London District were organised, following upon their organisation the employers in the London District federated, and by negotiation with this Federation the Women Workers' Section were able, working on the basis of the Trade Board, to secure special conditions for special classes of workers.

Women's wages at the end of the War.—During the war, the membership of the Women's Section was mainly engaged on war work of some kind, and serious apprehension existed in the minds of these members as to what their conditions would be when the war wages in their particular trade came to an end, or when they were obliged to return to their pre-war occupation. The Women's Section took an active part throughout the later part of the war in urging upon the Government the necessity of expediting the machinery of Trade Boards, in order to deal with post-war conditions, and strongly supported the passing of the 1918 Act. In 1920, when it became

15 February, 1922.]

Miss M. J. SYMONS.

[Continued.]

clear that the Government did not propose to continue the machinery contained in the Wages (Temporary Regulation) Act, as continued by the Industrial Courts Act, the Women's Section became increasingly anxious that Trade Boards should be set up in many trades with the least possible delay.

Government's Pledges with regard to Trade Boards.—At a conference of Trade Unions, summoned by the Minister of Labour in January, 1919, definite pledges were made that Trade Boards should be set up with the greatest possible speed, and these pledges were repeated on subsequent occasions.

In March, 1921, the Minister of Labour, in answer to a Parliamentary question, supplied the following list of trades in which investigations were being undertaken in February. (It should be noted that several of these trades—among others, the distributive trades and embroidery—were mentioned at the conference held in January, 1919):—

1. Distributive:

Alcoholic Liquor.
Boot and Shoe Wholesale.
Bread and Flour Confectionery.
China and Glass.
Confectionery (Sweets).
Corn and Forage.
Fancy Goods Group (including Bazaars, Games and Sports Requisites, Stationers and Cheap Jewellery).
Fish, Poultry, Game and Rabbits.
Fried Fish.
Fruit, Flowers and Vegetables (for Association figures—practically finished).
Furniture, Antiques, and Art Dealers (including Carpets and Floor Coverings).
Jewellery and Allied Trades.
Meat.
Retail Chemists and Druggists (including Photographic Materials).
Secondhand Clothing.
Seed. Tobacconists.

2. Manufacturing:

Bacon Curing and Quick Sale Goods.
Brass Ware.
Drugs and Fine Chemicals.
Embroidery and Trimmings.
Envelope Making and Manufactured Stationery.
Glove and Warp Fabric.
Hatters' Fur.
Home Knitting.
Jewellery, Clock and Watch Repairing.
Job Dyeing and Cleaning.
Lace Warehousing and Finishing.
Made-up Leather Goods.
Mustard.
Provender Grist and Rice Milling.
Sacks and Bags.
Self-raising Flour.
Tallow-melting and Refining.
Textile Smallwares.

3. Other Trades:

Funeral Furnishing and Undertaking.

With regard to this list of trades, the distributive trades have already been dealt with by the unions specially concerned with distribution, but the following instances may indicate the position which exists in certain sections of the other trades:—

Textile Smallwares Trade.—Investigations have been proceeding since April 7th, 1920. In November, 1920, instances of rates of 12s. paid to women of 18 in this trade were quoted to the Ministry of Labour.

Decorative Needlework and Embroidery Trade.—The Minister of Labour stated as early as the conference held in January, 1919, that a Trade Board was under consideration for these trades.

In December, 1920, a circular was issued by the Ministry of Labour stating that the Minister was anxious to set up a Trade Board with the least

possible delay. No further progress appears to have been made. Wages of less than £1 a week prevail for workers with considerable length of service.

Hatters' Fur.—Instances have come to our notice in which women in this trade are paid less than £1 a week. In one London firm employing over 30 workers, the quickest workers earn 18s. a week, ordinary workers, 15s. These workers were threatened with dismissal if they joined a trade union or were seen approaching a trade union official.

Catering Trade.—(1) *Summary of Negotiations.*—The Women's Section of the National Union of General Workers desire to emphasise more particularly the need for a Trade Board in the Catering trade. On this subject the following summary of negotiations may be of interest to the Committee.

For two years organisations interested in the Catering Trade have been pressing the Ministry of Labour to set up a Trade Board for this trade, in view of the fact that though many establishments are no doubt paying a fair rate, a large number are undoubtedly employing women and girls under conditions which would be universally condemned and which are a menace to good employers.

(2) *Conditions in the trade.*—The following summary of wages is representative of the bad conditions which prevail in certain sections of the trade all over the country:—

Manchester:

Restaurant A.—Hours 6.30 a.m. to 7 p.m., 7s. per week.
Restaurant B.—10 hours per day. 8s. to 10s. per week; 1s. 6d. addition for 8 hours' Sunday work.
Restaurant C.—Several branches; 10 hours per day. 12s. per week.
General and Licensed Hotels.—8s. to 10s. per week.

London:

Eating House Bar, with Branches all over London: 11s. 11d. per week. Hours 9 a.m. to 7 p.m.
In these restaurants tips are pooled, no waitress has ever received more than 5s. per month as her share.
Restaurant with several Branches: Kitchen Worker, 16s. per week. Hours 7 a.m. to 6.30 p.m.
West-End Dining Room: 30s. per week—no food. Hours, ordinary week, 6½, alternate weeks 72. 1 hour per day allowed for meals. These workers work on Sundays.
Three Central London Restaurants: Wages from 5s. to 4s. 6d. Hours in two cases, 9 a.m. to 10 or 11 p.m.
Woolwich Dining Room A: 11s. per week. Hours 7 a.m. to 9 p.m. every day in the week and alternate Sundays.
Woolwich Dining Room B: Kitchen Workers 10s., Waitresses 12s. 6d. Hours 7.15 a.m. to 7.30 p.m. No set time for meals—now open on Sundays.

Luton:

11s. per week. Hours 9 to 7; ¼ day off. Waitresses supply their own dresses.

Newcastle:

Wages vary from 12s. to 5s. per week. Hours from 10 to 12 per day—Sunday work included in some cases.

Brighton:

Dairies, creameries, teasshops, from 6s. to 10s. per week.

Cardiff:

Generally from 10s. to 18s. per week.

Glasgow:

From 8s. to 14s. per week.

15 February, 1922.]

Miss M. J. SYMONS.

[Continued.]

The cases usually include two meals, and sometimes food is supplied in the morning. It is difficult to estimate the value of these meals because the food varies greatly in quality. In most cases the waitresses are given what is left when the customers have finished, and in many places the quality and quantity of the food is bad and inadequate. The hours are often 72 per week.

It is sometimes contended that the wages in the catering trade are better than in many more highly paid trades because they are supplemented by tips, but, apart from the fact that self-respecting workers do not like to be dependent on tips, it should be remembered that in restaurants in the poorer quarters tips often amount to little or nothing.

While it is true that the better firms pay from 20s. to 30s. per week, with meals, and that the low wages quoted may form a small percentage of the total number of firms in the trade, it is our contention that, owing to the very large number of workers employed in this trade, a small percentage of firms represents a very large number of underpaid workers. Further, it will be easily understood that firms working under conditions of this kind are a serious menace to good employers, and certain large catering firms, fully recognising this danger, are strong supporters of Trade Boards.

Retention of all powers conferred upon Trade Boards under the 1909 and 1918 Acts.

For the adequate protection of trades, where Trade Boards are under contemplation, the Women's Section considers that all the powers conferred upon Trade Boards under the 1909 and 1918 Acts should be retained. In particular, they desire to stress the importance of the power to fix rates so as to apply to any special process in the work of a trade, or to any class of workers in a trade, in accordance with the provisions of Section 3 (1) (c) of the 1918 Act.

From practical experience they have found that in dealing with a new Trade Board in a trade which is badly organised, there is tendency to fix a very low general minimum time-rate owing to the exceptionally low rates which usually prevail in certain sections of the trade.

In such cases there is serious danger that in the process of improving the conditions of the lowest-paid workers, the wages of certain classes of workers who, for one reason or another, have been relatively better paid, may not be adequately protected and even that their wages in certain cases may be adversely affected.

To meet such cases the Women's Section considers that Trade Boards should retain the fullest powers to deal with the conditions which may confront them in any trade.

The present powers of the Trade Board in this matter are only permissive. It is a question on which full co-operation between employers and workers is necessary, and judging from past experience, it appears extremely unlikely that skilled rates would be fixed against the definite wishes of either side except in a case in which the evidence in favour of such rates proved startlingly conclusive.

With regard to the argument that once the Trade Board has fixed a minimum rate any rates above the minimum should be arrived at by means of voluntary agreement, the Women's Section is convinced that in

many cases where organisation is imperfect and particularly where a large percentage of the workers in the trade are women, such a procedure would be impossible. Further, they are convinced that many of the agreements in Trade Board trades which are now amicably arrived at and which give satisfaction to both sides would never be concluded unless the Trade Board retained its powers to make the agreements statutory, and thus prevent unfair competition. Examples of this point arose recently in the Boot and Floor Polish, Drug and Fine Chemical, and Sack and Bag Trades, in which the employers' sides of the Negotiating Committees represented to the trade unions that they could no longer maintain agreements if they were to be subjected to competition by firms in which organisation was unable to prevent the payment of low rates.

This point is further emphasised by the present tendency both of employers and workers to press for amalgamation of Trade Boards. As the area covered by any one Trade Board is widened the conditions with which it has to deal tend to become more diverse and complicated, and the Boards may find their usefulness seriously crippled if they are no longer empowered to deal freely with the facts before them.

Machinery of the 1918 Act for the establishment of Trade Boards.

In the opinion of the Women's Section the method of the 1909 Act of submitting every Provisional Order to Parliament for confirmation led to undesirable delay, and they do not imagine that it is seriously contended that anything would be gained by a return to this cumbersome machinery.

On the question of the wording of Section 1 (2) of the 1909 Act, as against 1 (2) of the 1918 Act, they consider that the emphasis laid in the 1918 Act on the lack of adequate machinery for the effective regulation of wages is proper. It is relatively easy for the Minister of Labour to secure reliable information on this subject, and our experience leads us to the conclusion that the lack of such machinery inevitably means the existence of unsatisfactory conditions in the trade. It must be pointed out that the time when low wages and unemployment are most prevalent, and therefore the need for the protection of the Trade Board greatest, is precisely when it is most difficult for the workers to come forward and give evidence as to low wages.

Recent experience with regard to the Catering trade proves that long hours, underpayment and the fear of unemployment render the workers increasingly unwilling to volunteer information as to their conditions.

In the case of all the Trade Boards which have been set up under the 1918 Act, very full investigations have been carried out by the Ministry of Labour, extending in all cases over many months, and it should be noted in estimating the value of the employers' objections to the machinery of the 1918 Act that in no case within our knowledge have the employers availed themselves of their right to request an enquiry under the provisions of the First Schedule of the 1918 Act.

Miss M. J. SYMONS, recalled and further examined.

12,468. *Chairman*: I understand, Miss Symons, you have a short statement to add?—I do not want to waste the time of the Committee in going over points that have been dealt with, but I have put in a summary, which you probably have, on behalf of my Union, because we felt that it might be useful to the Committee to have in some detail the Trade Boards which have been under contemplation which have not yet been set up, with some notes on conditions in those trades. The reason why I was asked to put it before you rather specially was because, as you may know, no new Boards have, in fact, been set up pending the meetings of this Committee, and in some trades—particularly the catering trade, with

regard to which I have put in a summary of negotiations of some length—the history of the proposed setting up of that Board covers a very long period—over two years. Steps have been taken during that time not only to put the conditions very fully before the Ministry of Labour, but waitresses have met Members in the House of Commons, and every effort has been made to get the facts of the case fully understood. On the last occasion when we met Dr. Macnamara we were told during that investigation that the Ministry had in fact got sufficient information to enable them to define the trade in a workable manner and to go ahead; but the general opposition to Trade Boards, and finally the setting up of

15 February, 1922.]

Miss M. J. SYMONS.

[Continued.]

this Committee, have apparently prevented any further action being taken, and we did want to urge, because of the conditions which we have tried to outline in this summary, that the Committee should bear that in mind, and, if possible, if that is in accordance with their final finding, make some recommendation for special urgency in some of these trades which have been delayed so long. I do not think it is an exaggeration to say that in certain of these industries the rates of wages and the conditions which are now existing are quite as bad as the worst cases of sweating which led to the passing of the 1909 Act.

12,469. *Chairman*: Is that so in the catering trade?—In the catering trade and in some of the other trades which appear in this list which was given by Dr. Macnamara in the House of Commons in March, 1921. The distributive trades, of course, have been fully dealt with before you, and I will not go into them. But trades like the textile smallware trade—the small ribbon making and silk goods of the kind which are made in the Coventry districts, the hatters' fur trade and most of the trades which appear on this list—have got, if not general underpayment, either certain districts or certain small classes of employers who are at the present moment paying wages which certainly compare unfavourably with the instances which were quoted in support of the 1909 Act. I have met, personally, women in all those trades who are getting wages of from 12s. to 16s. per week.

(The Witness withdrew.)

Professor TILLYARD, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

1. The Principles of Minimum Wage Legislation.

(a) *National Minimum Wage*.—I do not think a national minimum wage feasible. The smallest Board of which I am Chairman has 2 Sections for male workers and 3 Sections for female workers, and some of the sections are graded.

(b) *Legislation trade by trade*.—The present method of legislation trade by trade has worked with reasonable success, having regard to the novelty of the experiment.

(c) *Legislation district by district*.—In the early days of Trade Boards there was a very strong feeling amongst employers and workers against legislation district by district. Personally I thought that to some extent fairness was being sacrificed to simplicity.

I think there is a difference in principle between manufacturing trades and distributive trades. In a book written sometime ago and now in course of publication I wrote: "To take a local instance at the time of writing the general Birmingham rate for unskilled labour is about 63s. a week for men, and at Stratford-on-Avon it is roughly £1 a week less. In the case of ready-made clothes this is an immaterial factor, as though no ready-made clothes are likely to be made at Stratford-on-Avon, the transport of ready-made clothes from other centres is quite easy, and the concentration of the making of clothes in districts which have some special facilities for it, and in which the payment of a universally applicable minimum rate is feasible, may be to the real advantage even of Stratford-on-Avon. But in the case of milkmen the position is very different. Both at Stratford-on-Avon and Birmingham are bound to have milkmen. If the standard of good employers at Stratford is made the basis of Trade Board legislation and universally applied then only a few little country towns will get the benefit. On the other hand if the standard rate of good employers at Birmingham is taken as the basis, wages at Stratford will be suddenly raised about 50 per cent., and milkmen will be getting higher wages than some highly skilled workmen."

12,470. I take it you would like this printed as part of your evidence. Is it necessary to print the whole of this summary of negotiations? After all, that is only *ad personam*; it does not affect the merits of the thing?—If it is not possible to print it as a whole I wish some reference could be made to it, because I do think that the time which has elapsed in these negotiations is exceptional, and we would like to stress the fact which appears in the summary that on several occasions definite promises were made by various Ministers of Labour in the House of Commons that the Boards would be set up. The difficulty which will, I think, be obvious to you in these trades is that it is quite impossible to get anything adequate done in the absence of a Trade Board. Take the hatters' fur trade. I have met several firms in the London district lately, and in one or two cases the firm simply said that they could not raise their rates because of the competition of all these other firms who are underpaying. In other cases there is such victimisation that it is impossible for the workers to do anything. We have had several cases in that trade where the workers who have approached us have been instantly dismissed and replaced by other workers.

12,471. Is that all you wish to add?—I think the other points which were put in, because they were of special importance to us, have been dealt with in the general evidence.

2. The principles on which minimum wages are settled by Trade Boards.

Trade Boards seldom discuss principles. In fixing its first rates a Trade Board can generally be content if it can get the rates actually paid by good and efficient employers adopted by the Board. Where the trade is widely spread and the existing differences in wages are considerable it may have to be content with less.

In the last resort the views of the appointed members prevail and like all other arbitrators they have a natural tendency to split the difference between the two sides. Personally, I have known many instances in which several rates might all be said to be reasonable. In these cases the lowest reasonable rate, if granted with the goodwill of the employers' side, might in practice be worth more to the workers' side than a higher rate which would be bitterly opposed by the employers.

In altering existing rates it is not always easy to get the views of the good employer, who within reasonable limits will act with the employers' side as a whole, but sometimes a shrewd guess can be made.

3. The method by which Trade Board rate settlements are reached, e.g., how far such settlements are reached by complete agreement between employers' and workers' representatives; how far they are reached by (a) the influence, (b) the votes of the appointed members.

No general rule can be laid down. All that can be said is that there are numerous instances of all three methods. Allowance must also be made for the fact that there is often a real agreement between the two sides, though one or both feel pledged by instructions to say they cannot vote for what they really feel to be fair terms. I can give two recent instances. In one case the leaders of one side told the appointed members that it would not be unacceptable to their side if the appointed members voted for a compromise against which their side was going to vote in accordance with its instructions.

In the other case both sides were so pledged beforehand that although the appointed members had suggested a settlement which was really acceptable

15 February, 1922.]

Professor TILLYARD.

[Continued.]

to both sides, the deadlock could only be undone by the Chairman obtaining a pledge in conference with each side separately that if he himself proposed a resolution embodying this settlement the side would not vote against it, and his resolution was actually carried by three vote to none.

4. *The rate-fixing powers of Boards. Are the present powers (a) adequate, (b) excessive?*

The present powers on the whole are adequate. There is some difficulty in some cases in turning existing trade customs as to overtime payments into Trade Board overtime rates. In the Lace Finishing Trade Board there is urgent need of a power to fix rates for the middle-women as well as for the actual workers.

I do not think the powers are excessive if the Board use them with discretion. One board has without any friction at all introduced an elaborate grading scheme, and now has a proposal for male rates varying with the Cost-of-Living index figure. This Board will agree on pages of figures in the course of a single afternoon. Another Board, on the other hand, has with the greatest difficulty been induced to adopt a piecework basis rate for female workers, and though it has worked out a grading scheme, has not so far fixed rates for any but the lowest class of worker.

The guaranteed time-rate for pieceworkers, so far as women are concerned, was the product of war conditions and orders made to suit them. Under present conditions in any manufacturing industry a pieceworker whose wages had to be "made up" would be immediately discharged. I have not served on any Board which has fixed a rate of this kind, and if there is any feeling against this rate I see no serious harm in abandoning it.

5. *The sanction behind Trade Board rates. Should State enforcement be (a) maintained, (b) restricted in respect of any rates or classes of workers?*

(a) I think State enforcement should be maintained. I have personal knowledge that the Wages Temporary Regulation Act was largely a dead letter because there was no provision for inspection and official enforcement.

(b) I think it would be better to deprive Boards of some of their powers than to let them exercise powers, and then prevent the enforcement of their legislation.

6. *The Minister's position as the rate-confirming authority.*

It seems to me that the Minister's position as a rate-confirming authority is really double, and the two positions must be clearly distinguished—(a) Trade Boards legislate within the limits of the Acts of 1909 and 1918, and though the Courts are the final arbiters of the constitutionality of their legislation it is a great convenience that the Minister, with the aid of his legal advisers, should scrutinise this legislation before it finally comes into force. As, moreover, the Minister is responsible for the enforcement of Trade Board legislation, he would be in an invidious position if he had no power of checking legislation which he was advised he could not enforce in a Court of Law; (b) the Minister is from time to time appealed to by one or other side of a Trade Board to pronounce on the substance and merits of a Trade Board's decision. This, I think, a dangerous practice. If a Court of Appeal is necessary, then something better can be found than a Government Department. In Australia there is an Industrial Judge. In England any Appeal Court should, in my opinion, include employers and workmen as well as a legal and neutral element.

7. *The need for Appointed Members. (a) Chairman, (b) Additional Appointed Members. Voting powers.*

The Whitley Committee advocated placing industries under (a) National Industrial Councils, or (b) Trade Boards according as they were completely or

incompletely organised for the purpose of settling wages and conditions. I agree with this view. The essential difference between a Trade Board and an Industrial Council is that the former has a neutral element of appointed members through whom a decision can always be reached, and their decision is enforceable at law. Experience has shown that Industrial Councils sometimes fail to arrive at decisions. No very great harm is done in these cases, because the workmen are by hypothesis so completely organised that they are in a position to defend themselves, though possibly the undecided dispute may result in a strike or lockout. If, however, a Trade Board were not in a position to come to a decision and to enforce it, by hypothesis, a considerable section of the workers would be at the mercy of unscrupulous employers.

I am, therefore, a strong believer in the need for appointed members. As a Chairman, I find the assistance of appointed members invaluable. Apart from the fact that three heads may be better than one, there are occasions when it is an advantage that neither side should know exactly who is responsible for the decision given on a contentious point. I should leave numbers and voting power unaltered.

8. *Provision for special local conditions.*

I have already dealt with some aspects of this question under 1 (c)—the only district Committees I have known intimately were those of the first Tailoring Board. They were practically useless.

9. *The value of special powers of Boards in regard to juveniles:—*

- (a) *The fixing of rates on a pure age basis.*
- (b) *The fixing of rates on an experience basis.*
- (c) *Apprenticeship schemes.*

In the book already referred to I wrote as follows on this point: "If the trade demands a long experience before full qualification is reached, then a sum which is reasonable for an absolute novice is fixed, and the sum payable to the fully qualified worker being already fixed the scale for the years of learner-ship ascends by more or less regular increments from one limit to the other. If, on the other hand, age is of more importance than experience, and a boy of 19 with no experience is practically as good as a boy of 19 with five years' experience, then a scale of payments is fixed according to age. In practical life the two points of view cannot be entirely separated, and nearly all learner-ship schemes are a blend of two systems. In the first type the grading is mainly according to experience with certain allowance for age, and in the second type the grading is mainly by age with certain allowance for experience."

My experience is that Trade Boards will not take very much trouble over rates for juveniles while there is serious contention over the adult rates, and that more attention might profitably be given to the rates for juveniles. Most of the boards on which I serve are beginning to give this. One of them is discussing apprenticeship and finding it a very difficult question. It is worth considering whether permits for apprenticeship might not be given on an individual basis on the same principles as permits for the aged and infirm. So much depends on the reputation of the individual employer responsible for the apprentice.

10. *The influence of the working of Trade Boards on relations between Employers and Workers.*

This is a big question. I content myself with saying that any institution (Munitions Tribunal, Court of Referees, Local Employment Committee, etc.) which brings employers and workers round a table (or its equivalent) for the discussion of points in which both are interested improves the relationship between them.

12,472. *Chairman:* Professor Tillyard, you are Professor of Commercial Law at the Birmingham University, are you not?—Yes.

12,473. And Chairman of the Birmingham Court of Referees?—Yes.

15 February, 1922.]

Professor TILLYARD.

[Continued.]

12,474. And I think you were an appointed member of the Tailoring Trade Board?—Yes.

12,475. And you are Chairman of the Lace Finishing, the Coffin Furniture, and the Tin Box Boards?—Yes, and Chairman of the Chain Board and the Hollow-ware Board.

12,476. You have been good enough to send us a memorandum on certain points. First, you do not think a national minimum wage feasible?—That is so.

12,477. Do you wish to develop that?—I think if you have one wage for everybody you either put it very low, and a certain number of people are affected by it, and if you put it very high I think there are a good many objections. Taking my own group of Boards, I think there are very considerable variations in the rates. There is a variation of at least 1d. per hour in the women's rates at given times. Sometimes it is a little more I should think—possibly 1½d.

12,478. To what are those variations due?—The lowest rate fixed by any of my Boards would be in connection with home workers—largely because the trade is a home work trade.

12,479. That is a piece-rate, I suppose?—Yes, but based, of course, on a time-rate which would be a good deal lower than the time-rate which the other Boards have adopted.

12,480. So that really it is owing to the history and circumstances of certain trades that you cannot fix for those trades a minimum which would serve for the other Boards with which you are acquainted?—That is my opinion strongly.

12,481. *Dame Adelaide Anderson*: And that in some cases it might drive the trades out of existence?—Yes, it might if it were fixed at all high.

12,482. *Chairman*: Therefore, you prefer the present method of dealing with each trade one at a time?—Yes, by itself.

12,483. Now as to rate fixing district by district, what do you say? In the case of distributive trades I understand you think there are good reasons for that?—Yes; in the distributive trades I think it is fairly easy to do, and I think there are strong reasons for it. In the manufacturing trades the reasons are not so urgent, because manufacturers have a good deal of choice of districts. I should not like to rule out legislation district by district even in the case of manufacturing trades, but the feeling there is very much stronger against it. Most of my Boards are what I might call local Boards, and we are legislating more or less for a particular district. But I was for some years on the Tailoring Trade Board, which is a national Board, and there there was a very strong feeling against legislation by district, though the conditions of the districts did in fact vary very much indeed.

12,484. If a lower rate were fixed for a particular district the trade would migrate to that district?—Yes.

12,485. *Dame Adelaide Anderson*: Does a national Board like that tend to make the minimum rather lower than it might have been in some cases?—It did make the minimum lower than it might have been, but, strange to say, it was more effective in some of the higher-paid districts than we had any anticipation that it would be. For instance, we knew when we fixed the rates in the tailoring trade that the great bulk of the employers in Leeds would be paying a higher rate than our Trade Board rate, yet we discovered that there was a certain number of small people in Leeds who were not paying even the Trade Board rate. It did operate to some extent in Leeds though nothing like to the extent that it did in the Eastern Counties.

12,486. *Chairman*: You took the least favoured district, I suppose?—We took a medium district and legislated for that really.

12,487. But that would not apply with the same force to distributive trades which are localised, or, I suppose, to other trades such as the making-up

trades?—That is so; I should class the making-up trades with the distributive trades—work that is always done on the spot, so to speak.

12,488. And so with the laundry trade?—Yes.

12,489. Now dealing with the principles on which minimum rates are settled by the Boards, you say the Boards seldom discuss principles?—Yes, that is my experience.

12,490. They find out the rate which is usually paid by efficient employers, and they get as near that rate as they can?—Yes; I think that is the general line on which the Board begins.

12,491. I suppose they have regard to the cost of living?—Yes.

12,492. It seemed to me that there was some doubt in your voice?—I was wondering whether you meant the cost of living as between different districts, or the cost of living considered more or less on a national basis. At one time we used to hear a good deal about the differences in the cost of living as between different districts, and came to the conclusion that there was not a great deal in it, because although in the big towns they generally paid higher rent, they got a good deal of their food much cheaper than they did in the country districts, though, of course, in country districts and small towns there were certain articles of food they could get cheaper. I do not think we were much impressed at the difference in the cost of living between district and district; but, of course, in considering wages nationally the cost of living has been a very important point in the last few years.

12,493. *Sir Arthur Pease*: Do you have any general line which you carry through as to how much a minimum rate ought to be, based, say, on those figures which Mr. Rowntree put forward, which have been quoted to us, or anything of that sort. Did you have anything of that sort in your mind?—I do not think we had those figures in our mind. Boards which have been in existence a considerable time have the pre-war standard in their mind to some extent, of course.

12,494. We had an arrangement quoted to us the other day whereby the rates came down 4 per cent. for every 5 points fall in the cost of living figures. Taking the rates back to pre-war conditions, they would be left 25 to 30 per cent. above pre-war conditions. If everybody was to do that, what would happen?—You would have a general rise of wages of 25 per cent. compared with the pre-war rate. Whether the country could stand it I could not say.

12,495. Would it be possible for prices to be down to pre-war rates if wages were up 25 per cent.?—No, probably not. You would be stuck towards the bottom of the scale.

12,496. The two things would be quite incompatible?—Yes.

12,497. And therefore that particular trade which got a rate like that would be put in a specially favourable position against all other trades in the country, would it not?—Yes, I think it would. I think there is a general feeling that, if possible, one should try and grade one's scales so that there could be some small advance on pre-war figures amongst the Trade Board trades, because the general feeling was that the Trade Board trades, at any rate in pre-war times, were not having a sufficient rate. I mean it was hoped that they would gradually advance. They began at a reasonably low figure, and the feeling, I think, is that in trying to diminish rates now in accordance with the falling cost of living, you want to aim at a rate which would be a little higher than the pre-war Trade Board rate. One reckons that if there had been no war and no increase in the cost of living, and things had kept steady, the Trade Board rates would have gradually increased. The Tailoring Board began with a rate of 3½d., and just before the war they put it up to 3½d. I think it was hoped that in the course of a few years' time we should have got it up to 3½d. or to 4d.; so that there was a prospect of

15 February, 1922.]

Professor TILLYARD.

[Continued.]

gradually getting up the Trade Board rate, and the workers feel that they do not want to lose that prospect because in the interim there has been a war and a great alteration in the cost of living.

12,498. At the present time, in accordance with the statistics we have had taken out, the lowest Trade Board rates are substantially above the lowest rates in any of the large industries outside. Do you think that will continue?—I do not think it can. I should think part of that is possibly due to the slowness with which you can bring alterations into effect under the present system. I mean they have lagged a little bit behind the other changes of wages.

12,499. *Chairman*: I believe you are an economist. What do you say about State regulation of wages generally?—I hardly call myself an economist. Like everybody else, one has to dabble a good deal in economics, but really it is hardly my profession. I do not think you can go on raising wages indefinitely apart from increase in efficiency; but, on the whole, I think the Trade Board regulation of wages has promoted efficiency in the trades, and has, therefore, enabled employers to pay a higher wage.

12,500. That means that in order to pay a Trade Board rate they must sometimes improve their machinery and their organisation?—Yes; and there has been great room for it apparently.

12,501. *Sir Arthur Pease*: But the Trade Boards have done two things: one, they have raised wages; the other, they have cut down hours probably about 10 per cent.?—Is it quite fair to say that the Trade Boards have cut down hours? I mean there has been a general movement for the cutting down of hours, and I think Trade Boards have taken notice of it, but I do not think they have ever taken a lead. In some of my Boards we give overtime rates after 47 hours, but that is because 47 hours has been adopted in the metal industry as the standard working week, and it was adopted by the whole of the engineering and allied trades before any Trade Board put it into force.

12,502. I was not looking at it from that standpoint; but if hours are reduced 10 per cent. in all the trades and wages are put up, do you think it is possible to produce the same value as before? Do you think efficiency could possibly cover the two?—Some of my friends in the employing class tell me that the hours have not been so reduced as to affect output. Some of them are very strong believers in a 48-hour week. They say you get more production than from a 50 or 53-hour week. I have a good many friends in Birmingham who tell me that 48 hours is a better working week for the Birmingham industries than 53 hours.

12,503. Of course that may apply where the work is continuous?—Yes.

12,504. But in an intermittent trade it cannot be so, can it?—I should think not, possibly.

12,505. *Chairman*: Then you describe the part taken by the Appointed Members in fixing the rates, which agrees with what we have been told, and you mention a case, which is new to me, where nobody voted except the Appointed Member?—Yes. I am quite prepared to tell you in confidence the actual Board, but I thought it advisable perhaps not to mention it in my statement.

12,506. That is a case, I gather, where both sides were pledged to a particular proposal—one on each side. Neither would give way, but both consented to abstain from voting?—Yes. They thought they could go as far as that without getting themselves into too much hot water from their constituents on both sides, so I got it through on those lines.

12,507. Then as to the rate-fixing powers of Boards, you think they are not excessive if used with discretion?—Yes. As I try to indicate, Boards vary very much indeed. Some Boards like to exercise practically all the powers that are given to them under the Act. Other Boards are still in the state of mind in which they will not go beyond the general minimum

rate for the lowest class of worker in the trade. They can only be induced to go beyond that with very great difficulty.

12,508. But where the higher rates are fixed, I suppose they are very often fixed by agreement between the two sides?—Yes.

12,509. Then as to the sanction behind Trade Board rates, you think State enforcement should be maintained?—I think so, subject no doubt to due economy in administration. Of course, that is a point we cannot lose sight of just now.

12,510. Then as to the Minister's position as the rate-confirming authority, you say that is really double?—Yes. I think it is as well to separate those two aspects of the case. I do not think they are necessarily bound up together in the same person.

12,511. One aspect is his position as the person who has to consider and confirm the rates, and the other is his position when he is asked to pronounce on the substance and merits of a Trade Board's decision?—Yes. He is at the present moment legally responsible for enforcing the rate. It is quite possible that the Trade Board, not being composed of skilled lawyers, may go beyond their powers, or may express their intention in terms which are a little hard to justify under the exact terms of the Trade Boards Acts. In that case, I think it is as well that there should be some authority that should just scrutinise their determinations before they become law, to see that they are reasonably workable, and have a reasonable chance of enforcement in a Court of Law. But those are technical points; those are points of form which have nothing whatever in substance to do with what a Trade Board has done so frequently. When it comes to a question of whether a woman should be paid 7d. or 8d. an hour, I do not think the Minister is the person to have the last voice on a matter of that sort.

12,512. To what authority would you entrust that duty?—First of all, one has got to decide whether there should be an appeal court at all. The Agricultural Wages Board, for instance, acted, I believe, without any sort of authority behind them.

12,513. They did; but where are they now?—I suppose we must not discuss politics here. I think business men are keen, if they are going to have this sort of regulation of their trade, that it should be as far as possible a business regulation, and not a Government regulation. Therefore, if you are to have a court of appeal on substance, I think you ought to set up some sort of business organisation to deal with it. I was wondering in my own mind whether a grouping of Trade Boards for certain purposes—a sort of standing joint committee of Trade Boards which have, at any rate, more or less similar problems—could not be entrusted with certain powers of revision. I have not read any of the evidence which has been given here, but I believe one of the Chairmen before you has advocated a sort of Trade Board House of Lords. I do not know that a House of Lords formed of all existing Boards would be quite as valuable as the group system. There are a lot of Trade Boards in the sewing industry. There are a lot of Trade Boards now in the metal industry. The question is, whether the grouping of those by themselves under a sort of Joint Committee would not make a better revising body. I do not think experience of the tailoring trade would be very helpful in the metal trades, and *vice versa*. But I think the experience of each of half-a-dozen Boards in the metal trades might be of value to the other Boards.

12,514. But someone in the end has to consider these rates on merits, and endeavour to co-ordinate them, and it must be some one authority. We have two proposals before us: One is a Central Board such as you have just mentioned, and the other is the Industrial Court, which is a Court having a Chairman with legal knowledge, and representatives of employers and workmen sitting with him. As between those two have you formed any opinion?—I should prefer the Central Board to the Industrial

15 February, 1922.]

Professor TILLYARD.

{Continued.}

Court, I think. After all, the Trade Board machinery is a very special machinery, and I think people who have had experience of it would give more valuable decisions than those who have had no experience of it, however valuable their general knowledge of industrial conditions might be. I think the actual experience of sitting and working on a Trade Board would be valuable.

12,515. *Sir Arthur Pease*: You speak about the legal points which you might have to refer to the Minister. One or two witnesses have urged very strongly that a solicitor should be available when the Trade Board are drawing up their proposals or terms. Do you think that necessary?—I do not think I should have a solicitor present or waiting in an anteroom as a matter of course, because a great many of the determinations are quite simple, and there is no difficulty whatever in drawing them up. But I think the Board should be advised as to their legal powers at quite an early stage; for instance, criticisms should be made on the proposal stage rather than on the final stage.

12,516. The suggestion was that the solicitor should be in the Trade Board offices, available to be called if he was wanted on any particular point during the sitting of a Board?—Of course, for a Board sitting in London that is quite workable. Most of my Boards are provincial Boards, and we should have to wire for him, or something of that sort, which would be a little awkward. It would be a pity, I think, to get him down to a provincial meeting on the chance of his being wanted, because in nine cases out of ten he would not be wanted. I do not know that it is necessary to go as far as that. I have no objection to it if it is workable.

12,517. I was only putting that because you suggested that the Board should have the right of being legally advised after you send in the proposals?—Yes.

12,518. And other witnesses have suggested that legal advice should be taken at an earlier stage?—Yes; the earlier the stage the better. I thought, however, that it would perhaps be more workable to wait till the proposal stage. There is at the moment two months between the proposal stage and the next stage, so that there is plenty of time.

12,519. But suppose the proposals were altered?—If they were slightly altered in point of form, the solicitor often says there is no need to repropose, because it is on the question of reproposing that you waste such a lot of time. If it is purely a legal point and a matter of form—

12,520. There may be a good deal in a legal point, and then those matters of form might lead to very different results?—I should have no objection at all to the solicitor having his office at the Trade Board offices in order that he might be available at an early stage; but I rather deprecate the idea of his being trotted round to every board meeting in London as well as in the provinces. The Solicitors' Department to the Ministry of Labour deals with certain Trade Board things which are highly specialised, and they are highly expert in that particular matter.

12,521. *Chairman*: Do you always meet in the country?—The Tin Box Board meet in London. My other four Boards always meet in the country—two at Birmingham, one at Cradley Heath, and one at Nottingham.

12,522. Then I gather that you are in favour of keeping the appointed members at their present number?—Yes.

12,523. You would rather have three than be alone?—Yes, decidedly.

12,524. Then as to district committees, you think that there is something to be said for them, too, but they have not, in fact, worked out practically?—They have had so very little responsibility. What I felt about the district committees in the old Tailoring Board was that we went round and we had a stock resolution presented by each side, and they were

simply copies of each other. It was only here and there that we really got any local opinion or local information. We did occasionally, but I do not think we ever had any suggestions from the district committee that led us to alter our minds at the executive meeting.

12,525. Have you fixed any district rates?—I have not fixed any district rates. Mine are all practically local boards, except the Tin Box Board.

12,526. Then as to juveniles and the question whether their rate should be fixed according to age or experience, you would leave that to the Boards?—I think I would leave that to the Boards. I do not think you can lay down any general principle, in fact I have known Boards which have fixed the girls' rates on an experience basis, and the boys' rates on an age basis, showing that they have a perfectly open mind on the subject, because on one particular side of a particular trade they wanted to take one plan and on the other side the other.

12,527. *Sir Arthur Pease*: And in different trades the custom would necessarily be different, would it not?—Certainly.

12,528. One trade simply depends on a boy's physical powers?—Yes.

12,529. And in another case he has to be trained for years before he is worth any money?—Yes—physical powers with just a little knack and acquaintance with implements and the stuff he is handling. There is always a little bit of experience even where physical power is the main point.

12,530. *Chairman*: Have your Boards done anything to encourage apprenticeship?—The Chain Board is considering that at the present moment and is finding a certain amount of difficulty with it.

12,531. What is the difficulty?—I think the main difficulty is that we should have to legislate for all apprentices on the same footing, as a class; I think that is a real difficulty. I think they feel that certain employers have greater facilities for training apprentices than others, and that possibly they might be offered more favourable terms than the members of the trade generally; but there is no power at present to legislate except by classes. You cannot make any individual exceptions.

12,532. *Mrs. Lyttelton*: You mean it would be a minimum rate for apprentices?—Yes, it would be a minimum rate for apprentices, wherever they were; whereas they feel in certain cases you might possibly pass on apprentices to a particular employer at a special rate.

12,533. Would it be impossible to have differentiated rates for apprentices in different trades? I cannot see what the difficulty would be.—You can between different trades but not between different employers in the same trade.

12,534. I thought you meant in different trades?—No, I mean different employers in the same trade.

12,535. *Chairman*: That is what you mean when you say it would be worth considering whether permits might not be allowed?—If a particular employer is known to have laid himself out for teaching his apprentices in a thoroughly capable way and giving them a great variety of experience and so on, and another employer does not give equal facilities and does not give equal consideration to them, I do not see why the first employer should not possibly take his apprentices at a somewhat lower rate than the other.

12,536. I suppose that might give rise to questions of preference?—There might be accusations of favouritism. It would have to be very carefully worked out, and I am not quite sure whether it is possible in a big trade. In the chain trade, which is a local trade, and everybody knows everybody else, it is quite possible it might be done without much friction. I think you would have to get the trade unions—or at any rate the workers' side—to consent.

15 February, 1922.]

Professor TILLYARD.

[Continued.]

They would have to have a very fair idea that the conditions were fair in all the circumstances.

12,537. It would be very difficult to work?—It would be very difficult to work in a big trade. I should like to try it as an experiment in a small trade like the chain trade. There could not be very much harm done.

(The Witness withdrew.)

Sir GEORGE BARNES, K.C.S.I., K.C.B., called and examined.

The Witness handed in the following statement as his evidence-in-chief.

MEMORANDUM BY SIR GEORGE BARNES.

Responsible for administration of Trades Boards Act, 1909, from 1911 to March, 1916, as Comptroller-General of the Labour Department of the Board of Trade during the first part of the time and afterwards as one of the two Permanent Secretaries of the Board of Trade.

Sir George (now Lord) Asquith was Comptroller-General of the Labour Department up to 1911 and was consequently responsible for the earliest stage of the administration of the Act.

The Act of 1909 was passed during Mr. Churchill's Presidency of the Board of Trade, but the administration of the Act was worked out while Lord Buxton was President, and under his directions.

The Trade Boards in existence when I assumed control were as follows:—

Chain—established 3rd January, 1910.

Lace Finishing—established 7th September, 1910.

Paper Box (Great Britain) — established 29th July, 1910.

Ready-made and Wholesale Bespoke Tailoring (Great Britain)—established 23rd November, 1910.

Paper Box (Ireland)—established 8th September, 1911.

and subsequently a Board for Tailoring (Ireland) was established on 19th March, 1913. These four trades were included in the Schedule of the Act of 1909. In the original Bill shirtmaking appeared in the Schedule but, in the course of discussion in the House, chain-making was substituted as a more urgent case. It was considered advisable to begin with no more than four trades owing to the necessity of gaining experience of the working of legislation which was novel in character.

In 1913 four Provisional Orders were made and confirmed by Parliament applying the Acts to:—

Sugar Confectionery and Food Preserving.

Shirtmaking.

Hollow-ware and Tin Box Making.

Linen and Cotton Embroidery.

The reasons for this action were as follow:—

1. The experience gained from the working of the Boards already in existence showed that an extension of the operation of the Act might safely be made.
2. Representations had been made as to bad conditions existing in each of these trades.

In the case of *Hollow-ware* there was a strike of women in the Black Country to secure a wage of 10s. per week, and both in Parliament and in the Press, the necessity of giving the women in this trade the protection of a Trade Board was being urged. In the case of *Linen and Cotton Embroidery* the report of the Medical Officer of Belfast on the conditions of home-workers in the linen trades led to the appointment of a Committee of Inquiry under the Chairmanship of Sir Ernest Hatch. This Committee recommended the establishment of a Trade Board for certain branches of trade including linen and cotton embroidery. *Shirtmaking* was a trade which the Whittaker Committee on Homework specially noted as requiring the protection of a Trade Board and, as stated above, this trade was originally in-

cluded in the Schedule to the first Bill. In the case of *Sugar Confectionery and Food Preserving* a number of complaints were received by the Department regarding the conditions of the workers.

12,539. They find that other people are not so black as they are painted?—I think so.

While it was considered that these trades were suitable for the first extension of the operation of the Act it was clearly realised that there were many other trades in which wages, particularly women's wages, were no better than those to which the Act had been originally applied. It was, however, felt that the right policy was to proceed gradually with the extension of the operation of the Act to such trades. Apart from the desirability from the public point of view of proceeding cautiously with legislation of a novel kind, this method of procedure was also convenient from the administrative point of view as it afforded adequate opportunity of the gradual development of the necessary administrative machinery. It was accordingly the view of the Board of Trade that additions to the trades covered might properly be made each year.

In addition to the trades mentioned above the Board of Trade considered it necessary without further delay to extend the protection of the Act to the women in the calendering and machine ironing sections of the Laundry Trade in which wages were extremely low. A large proportion of these women were paid no more than 8s. per week. Accordingly a Provisional Order was made in 1913 to apply the Act to calendering and machine ironing in steam laundries. There were prolonged negotiations during which the employers consistently opposed the principle of applying the Act to the trade on two grounds (a) that wages were not exceptionally low; (b) that the large laundries which used calenders and machine irons would be placed at a disadvantage with smaller laundries which did not use this machinery. They proceeded with their opposition in the House of Commons and before the Select Committee introduced a new technical point that "steam laundries" would not include the growing number of laundries using electrical power. It being impossible under the Provisional Order procedure to amend an Order so as to include any type of laundry not covered by the original definition it would have been impossible in any case at that stage to include electric laundries, and the Committee accordingly recommended that the Order should be withdrawn.

In 1914 an Order was again made, omitting the word "steam" from the definition, thus making the Order apply to all calendering and machine ironing, whatever the motive power of the laundry. Again, at the Board of Trade the employers opposed the Order on general grounds, but before the Select Committee they based their opposition largely on the ground that it would be impracticable to differentiate between machine ironers and other machine operators. The Chairman, the late Sir Joseph Compton Rickett, expressed the view that the Board of Trade ought in any Provisional Order to cover the whole of a trade, and not to single out any particular processes (even though the low wages paid for these provided the justification for the application of the Act), but of course under the Provisional Order procedure no such extension of the Order was possible. After considerable hesitation the Committee decided by a majority to recommend the withdrawal of the Order.

It was the intention of the Board of Trade to review the position in respect of the Laundry Trade

15 February, 1922.]

Sir GEORGE BARNES, K.C.S.I., K.C.B.

[Continued.]

in the light of Sir J. Compton Rickett's opinion, but the outbreak of the war caused the suspension for the time being of action in this and other trades.

The Trade Boards for the trades covered by the Provisional Orders Confirmation Act, 1913, were established on the following dates:—

Shirtmaking (Great Britain)—6th Feb., 1914.
Sugar Confectionery (Great Britain)—6th Feb., 1914.

Sugar Confectionery (Ireland)—8th May, 1914.

Shirtmaking (Ireland)—14th May, 1914.

Tin Box (Great Britain)—30th July, 1914.

Hollow-ware (Great Britain)—4th Aug., 1914.

The Linen and Cotton Embroidery (Ireland) Board was on the point of establishment when I left for India in March, 1916. The reason for the long delay was the stubborn resistance of the Belfast employers to the constitution of the Board.

Tin Box and Hollow-ware making were included in one comprehensive Provisional Order, but the wide and distinct differences in the conditions under which these two branches of trade were carried on made it necessary to establish two separate Boards, as it would have been impossible to obtain the acquiescence of the employers in each branch to serve together.

The object of the Act of 1909 was the prevention of "sweating" and to give help and protection to those who were too weak to help themselves.

Relationship between the Board of Trade and the Trade Boards in the Administration of the Trade Boards Act of 1909.

While certain functions, such as the application of the Act to trades, the appointment of Trade Boards and the confirmation of rates and wages, were distinctly placed by the Statute in the hands of the Board of Trade, and others, such as the proposal and fixing of rates, in the hands of the Trade Boards, the responsibility for other functions, such as the enforcement of rates and the interpretation of scope, was not so clear.

In the early days of the operation of the Act all concerned were mutually feeling their way towards a system of administration which would work smoothly and at the same time preserve the proper position and functions of both the Board of Trade and the Trade Boards.

From the beginning there was a desire on the part of those who sat on the Trade Boards for autonomy. This desire showed itself in applications (a) for the control of the Inspectorate, and (b) a claim that the Trade Boards were entitled to decide questions of scope, that is, whether employers or workers were subject to or outside any particular Trade Board.

The view taken by the Board of Trade was that, as the President of the Board of Trade was responsible to Parliament for the administration of the Trade Boards Act, the Inspectorate must be under their control and that all decisions as to prosecutions at the public expense must rest with them.

As to scope, the Board of Trade expressed their willingness to give their opinion on any question referred to them, but always had to point out that an authoritative decision could only be given by a Court of Law.

Throughout the time of my responsibility Mr. Aves was Chairman of all the Trade Boards then existing. He was not an officer of the Board of Trade, though his salary was borne on the Board of Trade list. It was always intended that he should have some measure of independence of the Board of Trade. I had no power to give an order to Mr. Aves in regard to his action as Chairman of any Board, and I feel sure that I never did give an order. We were both very anxious that the Act should be a success, and worked very closely together. He made a practice of seeing me very frequently and of bringing all his difficulties to me for discussion. From time to time any difficulty which entailed laying down any point of policy of importance was discussed also by Mr. Aves and myself with Sir Hubert Ewellyn Smith,

and sometimes also with Lord Buxton, who was President of the Board of Trade from 1910 to 1914. In this way all questions of policy were settled at the Board of Trade, but Mr. Aves was alone responsible for the conduct of the meetings of the Trade Boards, and to his tact their smooth working was due. In order to keep full control over questions of policy, copies of all letters sent out from the Trade Boards Office were sent to me every day.

Though the Board of Trade held that the Inspectorate were under their control, the control was in practice delegated to Mr. Aves, who in this respect was personally responsible to the Board of Trade and whose discretion was strictly defined. The Inspectors were located in the Trade Boards Office, and Mr. Aves gave them daily instructions as to what they should do. Mr. Aves, of course, very frequently acted on the request of a Trade Board that an Inspector should be sent to some particular district, but the Inspectors received their instructions from Mr. Aves alone. I never gave the Inspectors direct instructions, but I received constant reports from Mr. Aves and saw the reports made by the Inspectors, and also saw the Inspectors personally from time to time, and, apart from their formal reports, heard from them verbally what they were doing.

Speaking generally, the relations between Mr. Aves and myself were never defined very strictly; my desire was to give him the largest measure of independence possible consistently with the retention by the Board of Trade of the control over all questions which involved policy.

(Signed) G. S. BARNES.

3rd February, 1922.

12,540. *Chairman:* Sir George Barnes, you were Comptroller-General of the Labour Department of the Board of Trade from after the passing of the Trade Boards Act of 1909 for a time, and then afterwards you were one of the two permanent secretaries to the Board of Trade?—Yes, and during the whole of that time I was in charge of the administration of the Trade Boards. It did not properly belong to the post of second secretary, but I took it with me.

12,541. Were you at the Board of Trade when the Act of 1909 was passed?—Yes.

12,542. That was in Mr. Churchill's time?—Yes. It was passed just before I became Comptroller-General.

12,543. Then I think in 1910 Lord Buxton became President of the Board?—Yes.

12,544. And it was in his time that you saw the Act worked?—Yes; the administration was worked out under him.

12,545. When you assumed control there were Boards formed under the Act itself?—Yes—the four named in the schedule to the Act.

12,546. That is the Chain, the Lace-finishing, the Paper-box and the Ready-made and Wholesale Bespoke Tailoring Boards?—Yes.

12,547. And there was also the Irish Paper-box Board?—Yes.

12,548. Shirt making, I think, was originally proposed?—Shirt making was in the schedule to the Bill, but was afterwards taken out on the ground that chain making was more urgent.

12,549. After the passing of the Act some trades were added by provisional orders?—Yes.

12,550. Shirt making was one of those, was it not?—Shirt making was one of those.

12,551. And sugar confectionery and food preserving, hollow-ware and tin-box making, and linen and cotton embroidery?—Yes.

12,552. Were those all added in 1913?—Yes.

12,553. I suppose in each case there were representations that the wages in the trade were exceptionally low?—Yes—either representations from outside or representations from the inspectors employed by the Board.

12,554. In the hollow-ware trade there had been a strike of women for 10s. a week, I gather?—That is so.

15 February, 1922.]

Sir GEORGE BARNES, K.C.S.I., K.C.B.

[Continued.]

12,555. And in the case of the linen and cotton embroidery trade there was a committee of enquiry which recommended the formation of a Board?—That is so.

12,556. Shirt making, I understand, was notorious as an underpaid trade, and had been referred to in the report of the House of Commons Committee on Homework?—Yes.

12,557. Where, I think, some figures are given us of the wages in the trade?—Yes.

12,558. In the case of sugar confectionery and food preserving, the department had received a number of representations?—Yes, there was a number in that case.

12,559. You were going cautiously in forming new Boards at that time?—Yes. The legislation of course was entirely new and we were anxious to go slowly because we wanted to feel our way to make sure that we were going on the right path.

12,560. And I think the Boards themselves were proceeding with some caution in fixing their rates?—Yes. The Chain Board, for instance, fixed a rate of, I think it was, 2½d., and the women, before the Board came into being, were receiving wages which, I think, worked out at only 1½d. per hour. Then when the Chain Board was formed with some help, I think, from Mr. Mallon, the women formed a union among themselves and demanded 3d., and they got 3d. That I regarded as satisfactory from the point of view of the Trade Board administration, because it taught the women to help themselves.

12,561. Sir Arthur Pease: Did they get the 3d. from the Trade Board or from the outside people?—The Trade Board rate was 2½d., but by organisation amongst themselves they secured 3d.

12,562. Chairman: Having a little more wages, they were able to afford organisation?—Yes; and I think a little more wages also gave them courage.

12,563. Dame Adelaide Anderson: They saw that improvement was possible?—Yes.

12,564. Which is always a great step forward for them?—Yes.

12,565. Chairman: And I think afterwards the Board raised the rate again?—Yes, it did subsequently, but they won their 3d. before the Trade Board rate was moved upwards.

12,566. Then you made an attempt to get the laundry trade under the Act?—Yes; we made several attempts unsuccessfully at that time.

12,567. There was opposition in the Committee of the House of Commons?—Yes. The trade was very strongly opposed to a Board, and unfortunately it fell through.

12,568. Sir Arthur Pease: But it was thrown out on a technicality at one time?—Yes, as far as I remember—you mean the technicality between steam and electric power. Only steam was in the provisional order, if I remember.

12,569. Then if it was confined to steam laundries, it would not have affected people with small laundries in their own homes?—That is so.

12,570. Dame Adelaide Anderson: But there was a gain in the end: it applied to the whole trade?—Yes, ultimately it did apply to the whole trade, but that was after my time.

12,571. Were not the employers apprehensive of competition from non-commercial laundries; was not that one of the obstacles at the time?—I do not think I know what a non-commercial laundry would be.

12,572. Convents?—Yes—you are quite right.

12,573. Charitable Institutions?—Yes.

12,574. That was one of the reasons for the opposition of the organised employers, was it not?—Yes.

12,575. Chairman: During your time was Mr. Aves Chairman of all your Boards?—Mr. Yates was Chairman of two of the Boards, as well as I remember, for a short time; but substantially Mr. Aves was the sole chairman.

12,576. You have given us a note on the relationship between the Board of Trade and the Trade

Boards under the Act of 1909, and you say that the proposal and fixing of rates was placed in the hands of the Boards?—Yes.

12,577. And the confirmation of rates in the hands of the Board of Trade?—Certainly.

12,578. But as to certain other functions, there was some uncertainty?—Yes, particularly with regard to scope. Scope of course was outside both the Board of Trade and the Trade Board.

12,579. How, in the early days, did you deal with those matters? I suppose the Trade Boards desired to deal with such matters as scope and enforcement of rates, and so on?—Yes, Trade Boards, I think, wished from the beginning to be autonomous and to have full power with regard to the enforcement of rates and control of Inspectors, and they would have liked to decide questions of scope. But, of course, questions of scope could only be finally settled in a Court of Law.

12,580. In the meantime the Board of Trade was always willing to give an opinion upon them, I suppose?—Yes.

12,581. Then as to inspection and prosecution, was that kept entirely in the hands of the Board of Trade?—Prosecution entirely. What happened with regard to inspection and the control of Inspectors was that they were housed in the same office with Mr. Aves, and the Trade Boards were allowed a certain measure of control over the Inspectors subject to the condition that all instructions for the Inspectors had to be given by Mr. Aves. They could ask Mr. Aves to send an Inspector to this place, or to the other place, and if Mr. Aves thought fit he did so. The Board of Trade, in fact, delegated their powers over the Inspectors temporarily to Mr. Aves.

12,582. Mr. Aves occupied rather an amphibious position. He was both Chairman of the Board and an official of the Board of Trade?—He was not a permanent official of the Board of Trade. His salary was borne on the Board of Trade list, but all the papers were very careful to say that Mr. Aves was not an official of the Board of Trade. He was nominally, at all events, independent, but, in fact, I do not think he was. Mr. Aves used to come and see me very often, probably several times a week. He brought me, I think, all his difficulties. He discussed them, and I think he always followed the conclusion which we jointly arrived at. There was never any question of giving Mr. Aves directions, I think, but he was always willing to follow what he was asked to do.

12,583. I suppose sometimes he consulted the Secretary of the Board and the President?—Yes. Mr. Aves saw both of them continually. He was continually in the office; he saw Lord Buxton often, and he saw Sir Hubert Llewellyn Smith often also.

12,584. I suppose a good deal of the success of the early Boards was due to Mr. Aves' conduct of the proceedings?—I think so. He was an extremely tactful man. I do not remember any cases of trouble. At least incipient troubles were always stopped somehow or other, and there never was any serious trouble of any kind.

12,585. Dame Adelaide Anderson: He had exceptional powers of seeing both sides of the question?—Yes, he had.

12,586. Chairman: I think you left the Board in the year 1916?—March, 1916.

12,587. So that you knew nothing of the beginnings of the 1918 Act?—No.

12,588. Have you had occasion to see something of its working since you came back?—Yes, I was always much interested in the Trade Boards, and when I came back here I said I should like to see how they were going on, and the Minister asked me to take the Chair on two or three Boards, which I have done. But I have only attended a very limited number of meetings, I think four.

12,589. There are some difficulties in the working of the Boards to-day. Have you formed any opinion as to how difficulties arise, and how they might be remedied?—Would you tell me which difficulties you have in your mind?

15 February, 1922.]

Sir GEORGE BARNES, K.C.S.I., K.C.B.

[Continued.]

12,590. When I said "difficulties" I rather meant complaints. There are many complaints from employers, and so on, as to the working of the new Act and the operation of the rates. Some of them, of course, are put down to delay in changing the rates, and so on. Others seem to go deeper. I was wondering whether you had studied the matter and formed any opinion?—I naturally have formed opinions to some extent, but I feel that my knowledge probably as to the present state of affairs is insufficient to help you much. Yet I will certainly tell you what impressions I have got if it will help at all.

12,591. If you will we shall be obliged to you. We know you have great experience in so many matters.—The old policy was to fix a minimum wage for workers who could not help themselves. The first Act was an anti-sweating Act only. At least, that is how we all regarded it. I think we considered that all interference by the State in commerce, industry, or wages, was in itself an evil, but it was capable of justification in this case, because there was a still greater evil to be combated, namely, the great evil of sweating. What has struck me lately is that that old policy has been departed from to some extent. I think there seems to me a tendency, so far as I am able to gather—this is mainly from papers—to fix standard wages and not minimum wages. Further, I think wages have been fixed in certain cases for people who are not helpless. At least, judging by the rates fixed, wages have been fixed for people who ought, I think, to be able to help themselves. Then there is one more thing that has struck me. In the old days I think our hope was in each case that the workers would pluck up courage and try and help themselves, and as I said just now, I think Mr. Mallon helped a great deal to that end. But now I think the workers' case is very largely in too many professional hands. The workers are rather in the background, and the professional element in the front. I feel very strongly that the workers cannot stand without some help from the professional element; I think they need help. But when they have a great many helpers I think it makes it less likely that they will organise themselves. On the other hand, the first result of a Trade Board is always to organise the employers. Employers who did not know one another before, come together and get acquainted with one another, and they also have a professional helper, and that professional helper makes it his business to organise the employers. That being so, it seems to me the more necessary that the workers should be encouraged to organise themselves, not spread over a great variety of Unions, but in a single Union.

12,592. *Mrs. Lyttelton*: You do not think that the operation of the Trade Boards lately has discouraged organisation, or do you go so far as that?—I do not feel I am able to say that because I do not know enough, but I should be afraid that that might be the case.

12,593. *Chairman*: Really the Boards have gone a good deal beyond your original conception of their functions?—Oh yes, they have undoubtedly.

12,594. That runs counter to your own view, your present view, that you should not interfere with trade more than is necessary?—I may be behind the times, but I have not changed my view.

12,595. *Dame Adelaide Anderson*: Does not that partly depend upon the extent to which the Government is really representative of the country? Perhaps that is going too far afield. If a Government is really representative, might it not go a little bit further than a purely internal Government?—You mean in the way of interference?

12,596. Yes, I mean if really representing the true feeling of the country and having its fingers on the pulse of time?—I do think that interference by the Government in itself is bad.

12,597. If it militates against self-help amongst the people, but if it is really expressing their wishes and saving strikes and conflict?—That is a very big "If," is it not?

Dame Adelaide Anderson: Yes.

12,598. *Mrs. Lyttelton*: You said, I think, that the first Act did encourage organisation very much amongst the workers?—I do not know about the first Act, but certainly Mr. Mallon did help early organisation very much. Whether he is doing the same now I have not been able to know.

12,599. I think his view is that Trade Boards are still encouraging organisation. I think you can deduce that from what he said this morning. It is an interesting point, if you think it has reached the stage where it is not encouraging?—I think there is a great risk of its discouraging organisation owing to the fact that there are in some cases many competitive Unions sitting on the same Trade Board.

12,600. I do not quite understand why that has the effect of discouraging further organisation?—I think that what I want to say is that if the workers are diffused over, say, half a dozen Unions they cannot speak with one voice strongly as if they were concentrated in one Union.

12,601. *Sir Arthur Pease*: Would that be partly got over if there were not so many Trade Boards?—If they were grouped more than they are to-day?—It might, I think.

12,602. Of course, in some of the big trades a works may have anything up to 10 or 20 unions to deal with outside the Trade Boards altogether?—Yes.

12,603. And sometimes that is a matter of great confusion and difficulty?—Yes, I can well understand that.

12,604. You cannot dictate to a man which union he has to be in?—Oh, no, I would not suggest that for a moment. Perhaps too much importance is being attached to what I said. I still think that the diffusion of a limited number of workers over a large number of unions does tend to decrease the power of those workers as an organised body.

12,605. They do not concentrate on the wages in that particular trade?—No. Probably each union has a great many other people to look after.

12,606. And they do not understand it as well, either?—No.

(The Witness withdrew.)

Miss Power and Mr. W. E. COUNSELL, called and examined.

The Witnesses handed in the following statements as their evidence-in-chief:—

STATEMENT HANDED IN BY MISS POWER, OFFICER IN CHARGE OF STAFF ENGAGED ON NON-COMPLIANCE INSPECTION UNDER THE TRADE BOARDS ACTS.

Section A.—Method of inspection under the Trade Boards Acts.

Section B.—Numbers, Organisation, etc., of Inspectorate.

Appendix I.—Specimen reports showing normal work of inspection:—

- (A) dealing mainly with timeworkers.
- (B) dealing mainly with pieceworkers.

Appendix II.—Numbers of inspectorate, compared with the number of firms known to fall within the scope of the Trade Boards Acts at various dates.

(Appendices handed in, not printed.)

INTRODUCTION.

The question of Trade Board inspection has constantly been referred to in the evidence submitted to the Committee.

The Committee will probably wish to have a description of the ordinary duties of an inspector under the Trade Boards Acts. This is included in Section A.

15 February, 1922.]

Miss Power and Mr. W. E. COUNSELL.

[Continued.]

SECTION A.

I.—Method of Inspection.

A brief description of the methods of inspection before and since the passing of the Act of 1918 is appended for comparative purposes. The work entailed in a visit of inspection has been very considerably increased during the second period. This is owing partly to the fact that the following additional powers were conferred upon Trade Boards by the Act of 1918:—

- (1) Power to fix rates for overtime.
- (2) Power to fix a guaranteed time-rate for piece-workers.
- (3) Power to fix a piecework basis time-rate other than the general minimum time-rates which had hitherto served as a basis for fixing piece-rates.

In addition to the exercise of these additional powers, however, the Trade Boards began after 1918 to make further use of powers which they held under the Act of 1909, such as power to fix rates "so as to apply to any special process in the work of the trade or to any special class of workers in the trade or to any special area." (Trade Boards Act, 1909, Section IV (1)). Under this provision, it is possible to fix occupational rates conditional on age and length of experience or competence, and finally rates applicable to certain areas.

It will be shown later that the average number of visits per week that an officer has been able to make has decreased by something like 50 per cent. in the last three years. This is largely accounted for by the increased difficulty of inspection.

An inspector is required to investigate and report on the following:—

(A) Posting of Notices.

During the earlier period, these were issued at long intervals, and there was usually only one, or at the most two, current at any one time.

Since the passing of the Act of 1918, notices have often been very numerous. This is due partly to the exercise by the Boards of new powers (e.g., to fix overtime rates), conferred on them by the Act of 1918, and partly to changes in the cost of living which have entailed more rapid adjustments in rates of wages than heretofore. The inspector is now obliged to spend longer time finding which notices are applicable, and how many of these are posted (e.g., at one time, no less than ten notices were current in the Brush and Broom trade).

(B) Wages and Time Records.

During the earlier period these needed to be only of a simple kind and were verified by questioning representative workers.

During the later period failure to keep adequate records became an offence, and special information on this point is now required from the officer. More elaborate records are needed, owing to the fixing of overtime rates, and in any trade where daily overtime rates are established, daily records must be available. This involves additional expenditure of time in checking the hours worked and wages paid. Where, as is often the case, a worker is employed in two or more different occupations at different rates of wages, the employer may be obliged to keep a separate record in each case. In the absence of wages or time records, or both, the inspector is often in the position of having to reconcile conflicting statements and to supply evidence which is only obtained after exhaustive individual enquiry upon such matters as lost time due to unpunctuality, holidays, sickness, etc., overtime, waiting time and allowances for meal reliefs.

(C) Rates of Wages Paid.

(i) *General Minimum Time-rates.*—During the earlier period there was in general one rate only fixed for male adults, and one for female adults. All workers found to be receiving less than the adult rate were either learners or permit cases, or were underpaid. It was not usually necessary to enquire into the occupation of adult workers unless under-

payment had occurred. Learners were payable either on an age basis, without regard to experience in which case certification with the Trade Board was not necessary, or on a basis of both age and experience in which case they were certifiable, and enquiry into the question of learning facilities became necessary. It was customary to make a retrospective inspection in order to see that successive rates had been paid as from the date of fixation. In cases where rates were clearly all in order, it was not always necessary to copy wages. In cases of underpayment which were not considered serious, the employer was sometimes asked to make a calculation of the arrears due, which could be checked if necessary at a subsequent visit.

After the passing of the Act of 1918 a very great variety of occupational rates were fixed. As already stated, this was not in virtue of any fresh powers conferred upon the Boards by the amended Acts, but was consequent upon the fuller use of powers which they already held under the Act of 1909. These occupational rates are based on age, length or nature of experience, skill, the exact type of work performed, or which the worker is capable of performing, or on the organisation of the workroom. It has, therefore, become necessary for the inspector to interview practically every worker employed, with a view to ascertaining the rate applicable, and many difficult questions of interpretation arise (e.g., in Retail Bespoke Tailoring, whether a worker is employed on "the constructional parts of coats"; in Dressmaking what constitutes the "general supervision of the fitter or forewoman"; in Coffin Furniture whether a worker is "an expert in all processes").

The rates fixed are not always stated hourly rates, e.g., in the milk distributive trade, the worker's wage is payable for the "hours customarily worked by the class in question," and the rate varies accordingly. Differential district rates have been fixed in certain trades, and the inspector has to determine the category to which the establishment belongs. In several trades different rates have been fixed for learners and apprentices, and the inspector should make careful enquiries into the exact conditions under which young workers are employed, in addition to the usual investigation of facilities for learning the trade.

The inspector is called upon to obtain signed statements from all workers underpaid in cases where any doubt exists as to the accuracy of the time records, the worker's age or previous experience, the proportion of time spent on work within the scope of the rates, etc. All previous experience in such cases has to be verified, and evidence thereof obtained in writing. In addition, a true copy of the wages book must be taken from the date when underpayment first occurred. It might be noted that owing to the frequent changes in the rates it has become necessary to inspect the wages paid at several different periods in order to see that compliance has been prompt and complete. It has been decided, however, shortly to confer on trained officers certain discretionary powers which should materially lighten the work of enforcement.

It should also be stated that under both the 1909 and 1918 Acts the inspector may have to decide who is legally the employer of the worker in question, whether a girl is a learner or a *bond fide* pupil, whether a tailor is a journeyman or a sub-contractor, and many other difficult points on which he should be able to give the employer guidance.

(ii) *Overtime Rates.*—Overtime rates are now enforceable, and these involve consideration of wages paid for work done on public holidays in addition to those paid during normal periods. In some cases it is possible for as many as three different overtime rates to accrue in one day (e.g., Milk Distributive trade).

(iii) *Permit Cases.*—Where application has been made by an employer for a Permit of Exemption in respect of any worker suffering from some physical or mental infirmity, or where the Inspector judges

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

that such application might be made, very careful investigation is required. The Inspector has to guard against exploitation on the one hand and dismissal on the other. It is necessary for him to report fully on the comparative productive value of the worker concerned in order to secure that this shall as far as possible be represented by the wage proposed. In cases where mental deficiency is the grounds for the application, the enquiry necessitates very tactful handling, and it is often advisable to interview the relatives of the workers before arriving at any conclusion. Permit case investigations are often complicated by the fact that the statements of employer and worker as to the latter's capacity are at variance, and it rests with the Inspector to state what reliance is to be placed on the evidence.

It should be noted, however, that whereas it was previously the custom for the Inspectorate to report on all Permit applications, the majority of these are now investigated by the Administrative Committee of the various Trade Boards, and only cases of special difficulty are referred to the Inspectorate. The Inspectorate continue, of course, to report on permit cases discovered in the course of inspection.

It will, therefore, be appreciated that even in the case of firms employing time workers only, the Inspector needs to show considerable technical knowledge. At any moment he may come upon a case of infraction so serious that the question of proceedings must be considered, and he is almost invariably required to take decisions and give opinions on matters with which no one who is not thoroughly acquainted with the trade is competent to deal.

(iv) *Piece-Rates (a) Indoor Workers paid on a Piecework Basis Time Rate.*—The piece-rates paid must be such as to enable the ordinary worker, "in the circumstances of the case," to earn not less than the Piecework Basis Time-Rate. Enquiry into the yield of piecework rates usually takes the following lines:—The workers are first sorted into several groups according to occupation (*e.g.*, trouser finishers, vest machinists, etc.). Then a rapid analysis of earnings is made by marking each case where earnings fall below the basis rate. All workers whose earnings appear to be unsatisfactory are questioned as to their age, experience, health, capacity, etc., and the head of the workroom is asked to furnish evidence on these points. Workers determined by reason of age, inexperience, ill-health, lack of diligence, slowness, etc., to be sub-ordinary are ruled out of consideration. Workers are then graded in order of earning power, and the worker next above those considered to be sub-ordinary is normally taken to be the "ordinary" worker.

The facts so obtained, taken in conjunction with the earnings of the workers, often enable an agreement to be arrived at between the employer and the Inspector as to the earnings of the ordinary worker, and consequently as to the deficiency in the piece-rates. Should an agreement not be reached, the yield of the rates may sometimes be more clearly determined by—

- (a) the use of comparative evidence, with the necessary precautions to ensure that the work performed is identical and the "circumstances of the case" similar;
- (b) the carrying out of tests on workers judged to be "ordinary" with a view to determining the exact yield of the rates under suspicion.

This is only possible where a very limited number of rates are supposed to be inadequate. Where a large variety of rates are in operation, it is sometimes possible from examination of the pieceworkers' books and from the evidence of the workers themselves to select one or two which show a lower yield than the others, and to make tests on these. If all the piece-rates in operation show an approximately equal yield it will probably be necessary to assess arrears on a per-

centage basis, taking the ordinary worker's earnings as the standard (*e.g.*, if the Piecework Basis Time-rate is 8d. per hour, and the ordinary worker earns 7d. per hour, arrears would be assessed at one-seventh of the total earnings of each worker).

Tests are usually carried out under the joint supervision of the employer and the Inspector on workers mutually agreed to be "ordinary." They are arranged to cover as long a period as possible in order that the factors of fatigue, time lost in changing from one lot of work to another, preparation of work, etc., may receive due consideration. When the times taken on tests have been carefully noted and the yield of the rates ascertained, comparison can often be made with the yield as shown by the earnings of the same workers over a period. This can, however, only be done when reasonably accurate time records are kept. It will be appreciated that the conduct of the tests and the measurement of the results is a difficult matter, and one which requires considerable tact and sound judgment on the part of the Inspector.

As the result of an investigation of piece-rates it may happen—

- (a) that the employer will increase his rates without altering the conditions of work; or
- (b) that he will meet the situation wholly or in part by an alteration in the organisation of the workroom.

A piece-rate inspection very commonly brings to light conditions which are capable of modification, so that in the altered "circumstances of the case" the piece-rates previously found to be inadequate may prove to be satisfactory.

It has often been necessary to investigate such conditions as the following:—

- (a) Waiting time owing to bad distribution of work, lack of balance among groups of workers, or insufficiency of work;
- (b) whether workers fetch and carry for themselves, divide their own bundles of work, receive the work properly prepared, etc.;
- (c) whether the machinery is in good working order;
- (d) whether lighting, heating, etc., are adequate;
- (e) whether "dead horse" exists, *i.e.*, the completion in a succeeding week of work given out and paid for in a previous week;
- (f) whether workers' earnings are subject to deductions,

and many other circumstances of factory organisation.

Under the Act of 1909, the General Minimum Time-rate was also the Piecework Basis Time-rate, and was, moreover, the same for all workers, as the Boards did not exercise to any considerable extent their power to fix rates for different classes of workers.

Since 1918, it has sometimes become necessary to ascertain the age, experience and exact occupation of every pieceworker, owing to the fact that the Piecework Basis Rate may vary according to age and experience (*e.g.*, in the Retail Bespoke Tailoring Trade) or occupation (*e.g.*, in the Perambulator Trade). It should again be stated that this is not in consequence of any new provisions of the Act of 1918, but is due to a fuller use of an already existing clause of the Act of 1909. This entails more detailed analysis and grouping of the workers concerned. The guaranteed time rate involves special inquiry and raises the question of permits of exemption for pieceworkers. Overtime rates for pieceworkers are fixed on varying bases, and may be payable on either the piecework basis time rate or the general minimum time rate. Special overtime rates for juveniles exist in certain cases.

It should again be noted that frequent changes in the rates involve an examination of piecework

15 February, 1922.]

Miss Power and Mr. W. E. COUNSELL.

[Continued.]

earnings during several different periods, and as it is the invariable practice to take an average over not less than three weeks, the resultant clerical work may be very considerable.

The difficulty of piecework inspection at the present time is very much enhanced by the fact that the yield of piece rates tends to approximate more closely to the minimum than was formerly the case. Where the only basis rate was the general minimum time-rate, the pieceworkers usually earned considerably in excess of this. Now the level of earnings of the ordinary worker more frequently hovers round the border line and accordingly needs more careful investigation. During the present trade depression, shortage of work produces abnormally low pressure in the workroom, and the task of judging whether the rates are adequate or not becomes increasingly difficult.

(iv) *Piece Rates: (b) Home Workers paid on a Piecework Basis Time-rate.*—Home workers are always employed on piecework, as no supervision can be exercised over them by the firm, and consequently their hours of work cannot be known and no payment by time-rates is possible. They are frequently engaged on work which is not done indoors, and in such cases comparative evidence is seldom available. When enquiring into the yield of piece rates to home workers, the Inspector is met by great difficulty in determining the "ordinary" worker. The worker has often lost the habit of rapid and concentrated work, is subject to constant interruptions, and can seldom work for long periods. Moreover, a large proportion of home workers are elderly, poor in health, or otherwise sub-ordinary, or, in the absence of factory experience, adopt slow and old-fashioned methods of work.

It is the officer's duty in those circumstances to judge whether the worker is working at an ordinary speed, and is possessed of a reasonable degree of efficiency. Finally, it has to be borne in mind that in dealing with home workers the "circumstances of the case" are often adverse, e.g., the worker has to use a small table instead of a bench, or a treadle machine instead of a power machine, and is without the normal factory equipment.

As it is impossible for the employer to keep time records in respect of home workers, it is necessary, where comparative evidence is not available, for the Inspector to carry out tests. For the reasons given above, this is a difficult matter, and especially so from the fact that the "circumstances of the case" and methods of work often differ considerably from one home worker to another. It is inevitable that the home worker should know that she is being tested, and her output may vary in consequence, so that in order to arrive at a fair estimate of the yield of the rates it becomes necessary to test as many workers as possible. In spite of these difficulties a great deal of work (e.g., Lace Finishing and Irish Embroidery) general minimum piece rates have been fixed as the result of numerous and careful tests made on home workers.

During the second period, it has in certain trades (e.g., Retail Bespoke Tailoring) become necessary to ascertain the age and experience even of home workers, as the piecework basis time-rate applicable may depend upon these factors. In certain cases (e.g., Retail Bespoke Tailoring home workers working on the "log") the times taken to complete the various garments are too great to allow of a personally supervised test, and the Inspector has to be possessed of very considerable technical knowledge before he can fairly test the value of the rates in force.

(iv) *Piece Rates: (c) Workers paid on General Minimum Piece Rates.*—In certain trades (e.g., Boot and Shoe Repairing, Brush and Broom, Fur, Hair Bass and Fibre, etc.), general minimum piece rates have been fixed, and in such cases the Inspector's duty is to compare the prices paid by the firm with those set out in the Trade Board Determinations. As

a great variety of piece rates has been fixed, this comparison is often a difficult matter. A slight difference in the specification of the work may make a particular piece-rate inapplicable, and it is inevitable that instances should frequently arise for which the list of general minimum piece rates fails to provide. In such cases the piece rates have to be judged by their adequacy to yield the piecework basis time-rate to the ordinary worker.

It will be observed from a study of the general minimum piece rates already fixed that, in order to see that there is compliance, a technical knowledge of the processes described is essential, and very careful inquiry into the methods of payment adopted by the firm is required.

(v) *Payment for Waiting Time.*—It is also obligatory, under the Act of 1918, for payment to be made for waiting time in the case of piece-workers, on a time-rate basis. The assessment of the amount of waiting time involves very careful enquiry, and the exact amount is often exceedingly difficult to estimate. This is particularly the case during periods of trade depression, when workers may be present on the employer's premises at their own desire and without the employer's express consent.

(D) Questions of Interpretation.

Another serious problem arising is the increasing difficulty in giving an employer guidance on questions of scope.

Definitions of trades may be such that a workshop is covered by more than one Board, and cases sometimes arise where one worker is entitled to rates fixed by several different Trade Boards. Examples of this are:—

- (1) A worker employed by drapery firm on alterations to ready-made tailored and non-tailored garments for female persons will come under rates fixed by the Wholesale Mantle and Costume and Dressmaking and Women's Light Clothing Trade Boards.
- (2) A coat maker, making ladies' and men's coats, both retail bespoke and for stock, will be entitled to rates fixed by the Retail Bespoke Tailoring Trade Board, the Ready-made and Wholesale Bespoke Tailoring Trade Board, and the Wholesale Mantle and Costume Trade Board.

Those instances occur more frequently in the clothing trades than any other. A more unusual instance outside these trade is that of a worker in a textile firm who may weave on the same loom webbing made from flax with hemp, jute with hemp, wool with hem, jute with cotton, and pure cotton. This worker may therefore come at various times within the scope of the Jute Board and the Flax and Hemp Board, and for part of her time will be engaged on work not within the scope of any Board.

The tendency recently has been to include within the scope of the rates such ancillary occupations as warehousing, portering and packing, the investigation of which often leads to very complicated questions of scope and interpretation. For instance, it may be very difficult to determine the rates due to the warehouse and factory staff of a firm which weaves damask, thus coming under the Flax and Hemp Trade Board, and also makes it up into household goods—work to which the rates fixed by the Linen and Cotton Handkerchief and Household Goods Trade Board apply.

(E) Other Points Arising in the Course of Inspection.

In addition to the inspection of notices, records and wages, which is always necessary, the Officer may be required to investigate infractions in other respects.

Inspectors have had occasion to deal, among other things, with such matters as:—

- (a) the production of false wages and time records;
- (b) the production of false receipts for arrears of wages;
- (c) the concealment of workers;

15 February, 1922.]

Miss Power and Mr. W. E. COUNSELL.

[Continued.]

- (d) the giving of false information and the incitement of workers to give false information;
- (e) collusion between employer and worker with regard to underpayment;
- (f) refusal to supply information and other obstructive tactics.

(F) *Proceedings Cases.*

From 1915 to 1920 Inspectors, in addition to undertaking the whole preparation of cases for proceedings, laid informations, made out summonses and conducted their own cases, including a number which presented considerable difficulties (e.g., the prosecution of a firm for aiding and abetting a sub-contractor to underpay, for procuring agents and workers to give false information, proceedings taken on piece-rates paid to outworkers, etc.). In several of these cases counsel was employed for the defence.

Since 1920 the actual conduct of cases has been in the hands of the Solicitor's Department of the Ministry, but officers still carry out most of the preliminary work, including the drawing up of summonses and the laying of informations. Thereafter they act as prosecutors on whom the principal burden of proof lies.

SECTION B.

(1) Numbers and Organisation of Inspectorate, 1911-1921.

(2) Recruitment and Training of Trade Board Inspectors.

(3) Classification of Work of Inspection (Complaint, Routine, Permit, etc.).

(4) Output of Inspectors.

(5) Proportion of time allotted to different types of Inspection.

(6) Specialisation of Officers according to Trades and Localities.

(7) The possibility of Pooling Government Inspectorates.

(8) The necessity for the continuation of Inspection.

(9) Attitude of Employers and Workers towards Trade Boards.

SECTION B.

Introduction.

In view of complaints which have been made, since the passing of the 1918 Act, with regard to the quantity and quality of Trade Board Inspection, the following statement has been prepared which deals with the past and present numbers and organisation of the Inspectorate, the claims made upon it, and its ability to meet them.

(1) *Numbers and Organisation of Inspectorate, 1911-1921.*

A. Numbers of Inspectors.

(i) *Period I, 1911-March, 1920.*—During this period the Inspectorate was full time on Trade Board Inspection and was controlled from and housed at the Office of Trade Boards:—

1911-12	...	4 Officers	Under the control
July 1914	...	9 "	of the Board of
July 1915	...	12 "	Trade.
July 1917	...	10 "	Under the control
July 1918	...	9 "	of the Ministry
July 1919	...	9 "	of Labour.

(ii) *Period II, March 1920, to date.*—In March, 1920, the Inspectorate was transferred from the Office of Trade Boards to the Headquarters of the Ministry of Labour, and at about this period arrangements were made for utilising the services of certain Officers of the Employment Department on Trade Boards work.

17 officers housed at Headquarters and the remainder in Provincial Centres.	July, 1920.	34 Officers	For analysis of this figure see Appendix II.
---	-------------	-------------	--

All Officers housed at Headquarters with the exception of 9 based in Provincial Centres.	July, 1921.	28 Officers.	
	Sept., 1921.	36 Officers.	(8 of these are still in training.)

In Appendix II, is shown the number of Inspectors at different periods compared with the number of firms known to be covered by the Trade Boards Acts. It will be seen that whereas in July, 1919, the number of firms per Inspector was 1,408, this increased in 1920 to 2,818, and at the present time stands at 4,966. This figure is based upon those trades in which minimum rates are already operative, and it would be increased to approximately 8,500 if there were included firms covered by Trade Boards which have no rates in operation.

B. Organisation and Duties of Inspectorate.

Period 1 (A) under the late Chairman, Mr. Ernest Aves, 1910-1917.—At this time the Trade Board Inspectorate consisted of a small number of permanent Officers engaged full time on Trade Board work. These Officers were under the immediate control of the Chairman who, at that time, acted as Chairman to all the existing Boards, of which there were eight English and five Irish.

During this period the Chairman, Secretary and Inspectorate were responsible subject to the direction of the Board of Trade, both for Inspection and Enforcement, i.e., the work of considering what action should be taken on an Inspector's report which revealed infraction. At this time the work of enforcement carried on from headquarters was considerably less than is the case at the present time, owing to the policy of allowing Officers to settle a number of the simpler cases of infraction at the time of making the inspection. The enforcement action on cases not settled on the spot was dealt with by correspondence from headquarters. At first, one senior, and later, one senior and one junior, Officer were engaged on this work. Only the most serious cases were considered with a view to proceedings. These were referred to the Labour Department of the Board of Trade up to 1917, and subsequently to the Trade Board Branch of the Ministry of Labour. Where legal proceedings were taken they were conducted up to 1915 by Solicitors acting as agents of the Board of Trade and thereafter by the Inspectors.

In addition to the ordinary work of inspection, Officers at this time were also called upon—

- (1) to hold meetings of workers at factories in order to explain the provisions of the Trade Boards Act, and to obtain workers' representatives and candidates for the workers' sides of Trade Boards;
- (2) to interview nominees of Trade Unions, etc., for workers' representatives and report on their suitability;
- (3) To make special enquiries at the request of Trade Boards including those involving the suggestion of general minimum piece-rates.

During this period, the Inspectors were not decentralised but were housed at the Office of Trade Boards working by tours from headquarters. Officers were not specialised in their work except in the more technical trades, e.g., Chain, Lace and Irish Embroidery. The specialised Officers not only carried out all inspections but also made the investigations on which the Board subsequently fixed general minimum piece-rates, and attended the bulk of the Trade Board meetings in a consultative capacity.

No statistics are available as to the number of complaints received during this period. From 1911-1915 inspection was on complaint only, but from 1915 with the increase in the Inspectorate much of the inspection undertaken was routine work. An Officer would visit a certain town on complaint cases and would take with him lists of the firms in that town coming under all or several Trade Boards. Having investigated the complaint the rest of his time would be spent on routine inspection.

A general routine inspection throughout the country was usually undertaken when a new trade was scheduled under the Act, e.g., the Sugar Confectionery trade at the close of 1915, an endeavour

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

being made to cover as big a section of the trade as possible for the purpose of explanation and inspection. Moreover at this period no firm which had already been inspected and found not to have complied with the requirements of the Trade Boards Acts, in however small a degree, would be left without a further visit for more than nine months. Firms showing compliance were generally marked "For Re-inspection" in 12 or 18 months (according to size) and firms showing infractions in 3 to 9 months (according to the degree of non-compliance).

Period 1. (B), 1917 to March 1920.—After the death of Mr. Ernest Aves the policy of having one Chairman was abandoned in favour of appointing a number of chairmen for the various Boards. The Secretary was then made Chief Executive Officer in addition to acting as Secretary of the Boards, and took over at the same time the control of the Inspectorate.

During the period 1917 to 1919, the numbers of the Inspectorate decreased from 12 to 9, as Officers left either on marriage or to take up work in other departments. At the time, therefore, of the large increase in the numbers of trades coming under the Trade Boards Acts, due to the passing of the 1918 Act (11 new Boards being set up in 1919 alone), the number of trained Trade Board Officers on the actual work of inspection was very small, only six remaining of the original twelve. On these Officers fell all the work of learning the technicalities of new trades, investigating a steadily increasing number of complaints and training fresh Officers appointed during 1920.

In March, 1920, the Inspectorate was removed from the Office of Trade Boards to the headquarters of the Ministry of Labour and was placed under the control of a member of the old Trade Board Inspection Staff, who held the title of Deputy Chief Executive Officer.

Period 2 (A), March, 1920 to July, 1921.—At the time of the transfer to the headquarters of the Ministry of Labour the bulk of the Inspectorate was still only semi-trained. Four of the six fully trained Officers of the old staff were at this period engaged for 75 per cent. of their time in reading and criticising the reports of the junior Inspectors and taking the latter out for training on the more difficult cases wherever possible.

Owing to the semi-trained nature of the Inspectorate and the steadily increasing number of trades coming under the Trade Boards Acts, it became necessary at this period to lessen the responsibility of individual officers. Instructions were accordingly given that no Officer was to settle any case out of hand at the time of inspection, all cases of infraction being prepared with a view to consideration of proceedings at headquarters. By this means it was ensured that junior officers should inspect only and should neither assume any of the work of enforcement nor take any decision on policy.

The work of enforcement was at this time in a transitional period prior to being separated altogether from the work of inspection. It was undertaken in part (*i.e.*, summarising cases for proceedings, etc.) by the senior Inspectorate engaged on reading and criticising reports of the junior Inspectorate, and in part, *i.e.*, the drafting of letters, etc., by a separate staff.

Shortly before this date it had been decided to make use of Employment Department Officers on Trade Board work in order to assist the regular Trade Board staff with the over increasing bulk of work. These Officers were under the disciplinary control of the Divisional Controllers of that Department, and were engaged partly on Trade Board work and partly on Appeals or on Unemployment Insurance work. They did not, however, combine Trade Board and Unemployment Insurance work in one inspection. Some of these Employment Department Officers came to the Trade Board headquarters for training, which nominally extended over a period of nine weeks. This period was only long enough to give them a

general grounding in the methods of inspection. It was found impossible, however, to give them longer training, owing to the small number of the old Trade Board staff available for training purposes, and the number of Employment Department Officers to be trained.

Other Employment Department Officers (under 30 in number) received no training at headquarters, but were engaged either on the simpler cases, or on preliminary investigation to be completed by those Officers who had received training at headquarters, and had returned to their Divisions to undertake a certain percentage of Trade Board work.

The Inspectorate, therefore, at this period fell into four divisions:—

- (1) The old Trade Board Inspectorate stationed at headquarters, engaged on special enquiries, training junior Officers, more difficult inspection cases, and work of criticism on junior Officers' reports, with recommendations as to enforcement.
- (2) Junior Trade Board staff, stationed at headquarters, but working also in the provinces; engaged entirely on inspection, reporting all infractions with a view to consideration for proceedings, but not calling personally for arrears or taking any decisions on policy.
- (3) Employment Department Officers trained at headquarters, and stationed in the provinces; working under the control of the Divisional Controllers of that Department, only part time on Trade Board work, but undertaking all kinds of inspection, as in the case of the junior Trade Board staff.
- (4) Employment Department Officers not trained at headquarters, stationed in the provinces; working under the control of their Divisional Controllers; only part time on Trade Board work, and only undertaking the simpler cases of time wages or making preliminary investigations for the Employment Department Officers in their Divisions who had been trained at headquarters.

It was found that the work of these untrained and of some of the semi-trained Officers was generally of little value to the Department; the impression created on the public by untrained Inspectors is always a bad one, and a Department may sometimes find itself in a different position as a result of the action taken by such Officers.

Period 2 (B) from July, 1921, to the present date.—In July, 1921, a reorganisation of the Inspectorate took place.

An Acting Chief Inspector was appointed with three deputies—

- (1) an Officer in charge of Enforcement, namely, the action taken by the Department on an Inspector's report.
- (2) an Officer in charge of Special Enquiries (*see* evidence submitted by Mr. Counsell) with two Inspectors working under his direction;
- (3) an Officer in charge of Non-Compliance Inspection with a number of Inspectors (varying from 28 to 32) working under her direction.

In September, 1921, the scheme of using Employment Department Officers part time on Trade Board work was abandoned, but nine of those Employment Department Officers who had shown considerable aptitude for the work were either loaned or transferred to the Trade Boards Department. These nine Officers ceased to be controlled by their Divisional Controllers, but were made directly responsible to headquarters, although remaining localised in their Divisions. Henceforward they were employed full time on Trade Board work. It was found, however, that the work of these nine Officers was naturally not equivalent to the work of about 40 Employment Department Officers employed part time on Trade Board work, and consequently in November, 1921,

15 February, 1922.]

Miss Power and Mr. W. E. COUNSELL.

[Continued.]

when the public criticism directed against Trade Boards resulted in a slackening of investigation in the trades in which it was suggested that Trade Boards might be set up, eight Intelligence and Statistics Department Officers (temporary), previously employed on this work, were transferred to the Trade Boards Division, and are now in course of training.

(2) *Recruitment and Training of Trade Board Inspectors.*

Among the complaints recently made as to Trade Board Inspection some have been directed to the employment of an untrained and unqualified staff.

(a) *During the earlier period* Trade Board Officers were possessed either of University education or of special technical or industrial qualifications. In most instances the competition for these posts was keen. Moreover the men and women received the same salaries and undertook work of the same responsibility. Inspectors at this time had certain discretionary powers in settling cases out of hand without reference to headquarters, and thus performed a percentage of the enforcement work of the Department at the time of inspection.

(b) *During the second period.*—After the passing of the 1918 Act, however, and the setting up of a number of new Boards fixing a variety of specialised rates, a considerable change took place in the position of the Inspectorate. Only six of the old trained staff were available for training new staff, and the allocation of Employment Department Inspectors to Trade Board work presented a number of difficulties, and was by no means altogether successful for the following reasons:—

- (1) Most of the Employment Department Officers loaned to the Trade Board Department were originally recruited for Unemployment Insurance inspection on an entirely different basis from the old Trade Board staff.
- (2) The period of training was far too brief for the increasing complication of the work, but the pressure of work both in the provinces and at headquarters made a longer period of training impracticable.
- (3) The number of senior officers was insufficient to undertake the work of training, six only being available, of whom two were frequently engaged on special enquiries for the Boards and consequently were not available for training purposes.

Moreover, it should be borne in mind that the advent of these officers coincided not only with the setting up of a number of new Boards covering in some cases trades requiring special technical and industrial knowledge which the Trade Board Inspectorate had yet to acquire, but also with a considerable increase in the number of infractions revealed as a result of inspection.

About 50 per cent. of the Employment Department officers either sent up for training or trained locally on Trade Board work proved capable of handling the more difficult cases. Of the remainder some retired voluntarily and others were re-transferred to the work of their own Department. Of officers competent for this kind of work as many as could be spared from their own work were taken over entirely by the Trade Boards Department at the time of the re-organisation of the Trade Board Inspectorate on the lines of the Majority Report in November last.

The employment of untrained officers on Trade Board work proved:—

- (1) the inexpediency of employing any but fully trained officers on Trade Board Inspection for the following reasons:—

(a) It is impossible before the inspection is made to differentiate between simple and difficult cases, as points may arise during any inspection which require the knowledge of a trained officer;

(b) even in cases which have been classed as preliminary investigations the

employer is likely to put questions of interpretation to the Inspector, which, unless he is fully trained, he will be unable to answer;

- (c) every inspection which is undertaken may reveal infractions which necessitate the preparation of a case with a view to consideration of proceedings, which an untrained officer would be unable to undertake. To suspend the case until it can be taken over by a fully trained officer involves delay which is both irritating and unfair to the employer, who, during the period of delay, may be incurring an increasingly heavy bill of arrears.

- (2) The necessity for a very careful recruitment of Officers whose visits may involve changes in the economic basis of an employer's business and whose recommendations are certain to be subject to very careful scrutiny both by the employer and by the Department. Officers employed on this work should not only be able to obtain the confidence of the employer and be fully cognisant of all aspects of Trade Board Inspection but should also be possessed of considerable knowledge of the organisation of the trades concerned.

(3) *Classification of Work of Inspection.*

(a) *Complaints.*—Complaints as to non-compliance under the Trade Boards Acts, are referred to the Trade Boards Inspection Section at the Ministry of Labour. These may be received from the Office of Trade Boards, from other Government Departments, by letter or by personal visit.

Complaints are graded on the following lines:—

Grade (a).—Specific complaints from Employers' and Workers' Associations in respect either of the whole of a firm's employees or of special groups of workers.

Grade (b).—Specific complaints from any source relating to the wages paid to individuals.

Grade (c).—Non-specific complaints, anonymous complaints and re-visits (carried out only where circumstances of exceptional gravity have arisen on previous inspection).

(b) *Routine Inspections.*—During the period October to December, 1921, a number of Boards have written to the Ministry of Labour requesting urgent routine inspection of firms in their respective trades. So far it has only been found possible to accede to these requests in the case of the Chain and Fur trades. Any diversion of staff on to routine inspections is necessarily at the expense of the investigation of specific complaints which may either have to be scrapped or investigated after an unduly long delay.

(4) *Output of Inspectors.*

Comparable statistics do not exist to show the average number of inspections carried out by an Inspector during the early years after 1909 and during the years since 1918. It is clear, however, that the Inspectors' output in terms of Firms inspected has decreased substantially, probably by as much as 50 per cent.

The decrease is held to be due to the following reasons:—

- (i) The necessity for mastering the technicalities of a number of new trades;
- (ii) the increasing complication of the determinations involving a considerable additional expenditure of time on each inspection. (See Section A.)
- (iii) the larger proportion of firms found to be avoiding their obligations, owing, among others reasons, to:—
 - (a) trade depression;

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

(b) failure of a large number of the smaller employers in the trades now coming under the Trade Boards Acts to receive Notices, e.g., in the Dressmaking and Millinery trades, resulting in a big percentage of cases of infraction due to *bona-fide* ignorance. Similar cases arose in the earlier trades scheduled, ignorance of rates at one time being very prevalent among tailoring sub-contractors; but such cases were proportionately much more numerous in the trades scheduled since 1918.

(c) The large percentage of small country employers covered by new trades who entirely failed to realise the meaning of compulsory regulation of wages.

(iv) The necessity for preparing almost every case of infraction, other than trivial, with a view to the consideration of proceedings;

(v) The fact that a considerable proportion of the staff is as yet not fully trained.

(N.B.—Both (ii) and (iv) above impose upon the officer a very large amount of clerical work which now absorbs a serious proportion of his time.)

(5) *Proportion of Time Allotted to Different Types of Inspections.*

(i) *Complaints.*—At present any allocation of officers to routine work entails either the deliberate scrapping of a certain number of complaints or so serious a delay that the position may have altered materially by the time the inspection is made. In practice this results in a policy of giving preferential treatment to complaints.

(ii) *Routine Inspections.*—It is frequently the case that on presentation of the annual report on inspection to any Trade Board a reply is received complaining of inadequacy of inspection and demanding prompt and general routine inspection. Such complaints are no new thing as the Trade Board staff has never been adequate to perform the duties required of it, but as is natural the disparity between the size of staff and the amount of work required to enforce the determinations of the existing number of Trade Boards has become much greater.

As already stated it was previously the general, although not the universal custom of the Department to make a general routine inspection in a trade newly brought under the Trade Boards Acts. During the past two years this has been found impracticable as a general policy, although experience has shown that when such a routine inspection has been undertaken (e.g., Sugar Confectionery, Tobacco, Laundry, Coffin Furniture and Hair, Bass and Fibre trades), a very salutary effect has been produced on the trade as a whole.

In certain trades investigation of wide general complaints (e.g., that the rates fixed by a certain Trade Board are being evaded in a specified town or area) have brought about inspection approximating to routine, although not as widespread as would be the case in a general routine inspection in which a number of inspectors in different areas participated.

It is also a very frequent source of complaint by employers that one firm in a town may be visited on a complaint but that no inspections are made of competing firms in the same trade. This may place a single firm at a very serious disadvantage. It is often known that non-compliance in a certain area is more or less general, but owing to the urgent nature of specific complaints, the inspector is unable

to make the routine investigations which are necessary both in justice to the workers and to those employers who have either been singled out for inspection or have complied voluntarily with Trade Board requirements.

(iii) *Permit Investigations.*—During the earlier period the inspectorate investigated all permit cases. Later, owing to the inadequacy of the Trade Board inspectorate, a certain proportion of cases have been investigated by members of the Administrative Committee of the Trade Board concerned, the remainder being dealt with by the inspectorate.

The Trade Boards are now being informed that only cases of special difficulty should be submitted to the inspection section, and that unless visits could be guaranteed in such cases within a period of two months they would be returned at once to the Trade Boards for action by the Administrative Committee of the Board. This policy was adopted owing to the fact that visits on permit cases were considered uneconomical with the small staff available when, as was often the case, long journeys were made and considerable time expended in order to investigate the economic value of a single worker.

(6) *Specialisation of Officers according to Trades and Localities.*

During the earlier period officers were all working from headquarters, and might be called upon to make inspections in any trade to which the Trade Boards Acts applied, with the exception of the Chain, Lace Finishing and Irish Embroidery trades. These latter were regarded as technical trades, and certain officers were trained to conduct all the inspections connected with them. Moreover, these trades were localised so that the officers in question were able to work for considerable periods from local centres.

At the present time, with the exception of eight employment department officers, with their headquarters at Edinburgh, Glasgow, Manchester, Newcastle, Leeds, Doncaster, Cardiff and Plymouth, the whole of the Trade Board inspection staff is stationed at headquarters. It has up to the present been found impossible to achieve further decentralisation owing to the lack of sufficient responsible trained officers to take charge of decentralised staff. It is necessary to maintain at headquarters a nucleus of experienced officers to undertake specially difficult work and to train new officers. It is felt, however, that in the near future a greater measure of decentralisation may be possible, and also that it may be advisable to allocate certain officers to definite groups of trades in which they have been given the opportunity to acquire expert knowledge. This is considered as specially necessary in view of the increasing number of trades concerned. It is felt to be unreasonable to expect any officer to have a thorough knowledge of all the scheduled trades. Officers might receive training in one of a series of groups of trades, e.g., clothing trades, textile trades, metal trades, distributive trades, &c., so that at a future date each local area might have the services of a number of industrial experts. It is felt, however, that the present staff is too small to allow both of decentralisation and of specialisation.

(7) *The Possibility of Pooling Government Inspectorates.*

It is understood that a number of witnesses in giving evidence before the Committee have suggested that, in the interests of economy and efficiency, there should be a pooling of the services of the different inspectorates, e.g., the combination with Trade Board inspection of one or more of the following:—

Factory inspection.

Health inspection.

National Health Insurance inspection.

Unemployment Insurance inspection.

There are three main reasons why it is felt that this is not a practical solution of the difficulties arising

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

from the present inadequacy of Trade Board inspection:—

(1) *The difficult and technical nature of Trade Board work.*

It has been found in practice that an officer cannot be considered fully competent until he has had several years on Trade Boards work. It is understood that the same applies to factory inspection, which also admittedly requires a high degree of specialised training, and considerable experience. The chief matters in which not merely training but experience are necessary are:—

- (a) Ability to advise on questions of interpretation and knowledge of opinions expressed on scope. (N.B.—There is a large and steadily increasing number of these.)
- (b) Technical knowledge of trades necessary to the enforcement of general minimum piece-rates.
- (c) Ability to conduct tests and in other ways to examine the adequacy of piece-rates in trades where no general minimum piece-rates have been fixed. It should be noted in this respect that length of experience is particularly valuable to an officer, as he can collect comparative information to be used in difficult cases.

It is felt that Trade Board work is sufficiently complicated to require further specialisation rather than the reverse. Even if the Trade Boards so simplified their determinations that inspection more nearly approached the work as carried out during the earlier period, this would still be the case.

(2) *The differing organisation of the several Inspectorates.*

Certain Inspectorates work mainly by areas and not by trades (e.g., Factory Inspectors), and this system, which is economical from the point of view of one Department, is uneconomical from the point of view of another. It would, for instance, be very difficult to combine rapid and widespread inspection, such as National Health Insurance, with the much more detailed Trade Board Inspection affecting certain trades only. Both would probably suffer by the combination.

It is moreover understood that Factory Inspection involves a high degree of technical knowledge on questions such as sanitation, machinery, conditions in dangerous trades, &c., which entail training for a considerable period.

National Health and Unemployment Insurance Inspection, moreover, cannot be efficiently carried out without a knowledge of several thousand Empire's decisions in the light of which particular cases must be decided.

It is felt that in order to make an officer proficient in more than one of the branches of inspection here discussed, the training required would be so long as to render the scheme impracticable with any persons not possessed of outstanding qualifications.

(3) *The difficulties of joint control of an Inspectorate.*

Officers would presumably be under the control of a number of Departments, which divided control does not tend to promote efficiency. This was found to be the case when Employment Department Officers still under the control of their Divisional Controllers were engaged partly on Unemployment Insurance and Appeals work and partly on Trade Board work. It is realised, however, that reorganisation might take place under such conditions that this difficulty did not arise.

(4) *Different methods of recruitment.*

Methods of recruitment differ very materially in the case of the Inspectorates referred to, and this may produce serious differences in the grade and qualifications of the Inspectors recruited. In the one instance where an experiment has been made in combining Trade Board work with another branch of inspection (i.e., Unemployment Insurance Inspection), officers have found the efficiency on Trade Board work could only be maintained if they were kept for the whole of their time on that work.

(5) *Length of visits of inspection.*

A Trade Board Inspection almost invariably occupies a considerable time, and may take several days. If one Inspector is expected to carry out two or three different kinds of inspection at the same firm, the visit would, it is felt, be unduly prolonged and the demands made upon the time both of employers and workers might be considered unreasonable.

(8) *The Necessity for the Continuation of Inspection.*

The question may arise whether, in view of the fact that so small a proportion of the firms covered by the Trade Boards Acts can be inspected by a staff of the size of the present Trade Board Inspectorate, it is worth while maintaining any official Inspectorate.

For the following reasons, it is felt that the existence of an inspecting staff, even though inadequate, is essential:—

- (a) It is often the case that the very fact of an Inspector's visit to one employer may lead other employers in the district to put their houses in order. This is particularly the case where the Department institute proceedings against a firm in respect of flagrant breaches of the Act. It is also certainly true that so long as an Inspectorate exists at all, the possibility of inspection leads to a considerable measure of compliance, e.g.
 - (i) The visit of an officer to one member of an Employers' Federation is generally communicated to other local members, with the result that they are led to expect inspection and prepare for it.
 - (ii) In provincial towns the knowledge that a Trade Board Inspector is abroad spreads very rapidly, and on a return visit to a district an officer often finds that a revision of wages in firms not previously visited dates from his first appearance in the town.
 - (iii) Workers often inform their trade union officials that an inspection of their firms has been made, with the result that these persons ask for interviews with the Inspector, in the course of which they not only obtain assistance and information about questions of interpretation, &c., but often lodge a number of complaints.

(b) Trade Boards apply to trades which are not efficiently organised and in which a large number of workers are without the protection of any union. Such workers are individually not in a strong enough position to make terms with their employer and to compel his compliance with the Trade Boards Acts.

(c) The trades concerned are largely those in which there is a preponderance of female workers and in which out-workers are employed to a substantial extent. There is in the case of these latter a special danger of exploitation.

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

- (d) It is the experience of Inspectors that workers in many cases are either unable to understand the notices, even where they are displayed, or, although they may realise that they are being underpaid, they are afraid to make any complaint to the employer for fear of dismissal. This is particularly the case in times of trade depression when the fear of unemployment is general.

Sufficient reasons have already been given to support the contention that not only the maintenance of the Inspectorate, but also an increase in its numbers is desirable. It is felt that the 4 per cent. inspection hitherto possible with the existing staff, and still more the 2 per cent. inspection which is all that could be maintained under the same conditions, if rates came into force for the Boards which as yet have no operative rates, is quite insufficient to secure general compliance.

It should, however, be borne in mind that the longer a trade remains under a Trade Board, the more familiar do employers become with their statutory obligations under the Act and the less need is there for inspection, although trade depression is always liable to produce non-compliance in the lower end of the trade. The percentage of infractions in the trades in which Trade Board rates have been operative over some years is noticeably less than that in the trades recently scheduled. This is attributed partly to the more general knowledge and familiarity with the rates in operation and partly to the better organisation on the part of workers and employers which is calculated to ensure a higher standard of compliance.

(9) *Attitude of Employers and Workers Towards Trade Boards.*

a. *Under the Act of 1909.*—Generally speaking, there was no feeling of hostility towards the 1909 Act either among employers or workers. The employer welcomed the Act as supplying him with a fair basis for competition by eliminating the "sweater." The worker welcomed the Act as securing to him a basis rate below which he knew his earnings could not fall. Where hostility was found it was generally in the case of small employers such as tailoring sub-contractors who, through failure to understand Trade Board notices, had unwittingly incurred liabilities in respect of arrears of wages.

b. *Under the Act of 1918.*—It is felt that hostility towards the 1918 Act is chiefly confined to the owners of medium and small sized retail businesses.

The chief grounds of complaint as frequently expressed to the officers of the Department are:—

- (1) *That failure to receive Trade Boards notices has left the employer in bona fide ignorance of the existence of any minimum wage affecting his industry.*

The employer may not take in a trade paper, may fail to have seen any notice in the general Press, and may not have been on the Trade Board list for despatch of notices. The visit of an Inspector, therefore, may involve the employer in serious economic consequences.

- (2) *Inadequacy of Inspection.*

One employer may be inspected on complaint and as a result compelled to adjust his wages. Other competitive businesses against which no complaints happen to have been received are consequently not visited by the Inspector. The employer who has thus been compelled to put his house in order is left with a legitimate grievance which he often voices by protesting against the Act itself rather than more logically against its administration.

- (3) *Delay in reducing rates to correspond with the decrease in the cost of living.*

This is a fairly frequent source of complaint, but it should be borne in mind that the worker

had a corresponding grievance in the slowness of machinery for increasing rates at a time when the cost of living was steadily rising.

- (4) *Number, size and complication of Trade Board Notices.*

Some small employers find genuine difficulty in grasping the contents of many of the Notices applying to their businesses.

- (5) *Difficulty in deciding under which Trade Board a worker should be placed and of fixing the wages of a "border line" worker who may come under two or more Boards*

e.g., the case of a worker engaged in the workshop of a drapery establishment on making a woman's costume or coat-frock. The question arises as to whether the garment is "tailored" or "dress-made" and whether the worker should be paid retail bespoke tailoring or dress-making rates. What, in fact, constitutes a "tailored" garment?

- (6) *The variety of specialised rates and the difficulty of interpreting definitions.*

The terms used to define a special class of worker are often open to a variety of interpretations, e.g. (1) in the Perambulator trade, what constitutes "finishing," employment on which entitles the workers to a special rate. (2) In the Dressmaking trade, what constituted a "fully qualified bodice, skirt, gown or blouse hand" and enabled a worker to claim the special high rates set out for this class?

- (7) *The position of slow or incompetent workers.*

It is a fact that under the Act of 1918 certain retail clothing and distributive trades have been scheduled in which there is very little possibility of putting workers on piecework (e.g., Retail Bespoke Dressmaking, Retail Bespoke Millinery and Milk Distributive trades). This raises in a very much more acute form the difficulty of the slow or incompetent worker who is not a case for a permit of exemption. This difficulty can be met to a large extent in the wholesale trades by putting the worker on piece-rates. It is felt, however, that in the retail and distributive trades this class of worker may, to some extent, suffer. In many cases such a worker is in receipt of a rate of wages which admittedly represents his value to the employer, and he resents the enforcement of a rate which may result in his dismissal. This difficulty would be, to some extent, lessened if the ground for granting a permit, as set out in the Acts, were widened.

- (8) *The case of the sub-contractor.*

The difficulty of the employer who falls under the category of sub-contractor is a real one. It is felt that this type of employer has a genuine grievance in that, although compelled as an employer to pay his workers at not less than the Trade Board minimum rates, he himself, being a sub-contractor and not an employee, is left without any similar wage protection. The warehouse or firm for which he contracts is not compelled by law to remunerate him according to any minimum scale. In consequence, he may find his contract price cut to so fine a figure that, in order to make a reasonable profit, he is driven to run the risk of paying his workers at rates lower than those fixed by the Trade Board. Additionally, the principal employer, if so minded, may reduce his contract price in advance of any decrease in the Trade Board rates (i.e., on the issue of the Notice of Proposal) without the sub-contractor having any power to prevent him, although the reduction may eat up all, or the greater part, of his remuneration.

This difficulty is particularly felt in the case of the Lace and Tailoring Trades. Moreover the difficulty is accentuated when it is realised that the principal employer can only be forced indirectly to pay higher prices to the sub-contractor if it can be proved that the prices paid

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

were such as to make the firm liable to legal proceedings for "aiding and abetting" the sub-contractor to commit a breach of the law. In practice this is not easy of achievement, although it has been done in the Lace trade where general minimum piece-rates are involved, in the case of Power v. Field.

This matter has been raised in evidence given by representatives of the Lace trade in the form of a request that Boards should have power to fix legal commission for middle workers. It might be noted that the problem is a much simpler one in trades where general minimum piece-rates exist, such as the Lace trade, than in others where only piecework basis time-rates exist, such as in the Retail Bespoke Tailoring trade.

For the most part complaints against the actual rates fixed are thought to be due, with certain marked exceptions, to general causes such as the universal trade slump and the condition of foreign exchanges, making competition from abroad in certain trades very keen, rather than to any belief that the Trade Board rates in themselves are too high.

The exceptions, however, to this are:—

- (a) Small employers very commonly complain that only the big firms are adequately represented on the Trade Board, and that those pursue a definite policy of squeezing out of the small man, e.g., Laundry, Dress-making, and Sugar Confectionery trades.
- (b) The very general protests in the retail sections of the Dressmaking and Millinery trades at the learners' rates as originally fixed. These were held to be such as to preclude the possibility of adequate training in a valuable handicraft trade.
- (c) Employers in rural districts often complain that a flat rate for the whole country acts inequitably; that rates which are both equitable and necessary in large towns hit the country districts very hard and cannot in fact be paid there, e.g., the Retail Bespoke Tailoring rates as applied to the small country tailor employing a few hands working on old-fashioned non-subdivisional methods and making garments for working-class customers.

In the two latter cases the force of these criticisms has been realised by the Trade Boards in question, who have taken steps to meet them.

STATEMENT handed in by MR. W. E. COUNSELL
(Officer appointed under the Trade Boards Acts in charge of Special Inquiries Section).

MEMORANDUM ON SPECIAL INQUIRY WORK.

(1) *Origin of Special Inquiries.*

In order that a Trade Board may carry out its functions with the greatest benefit to the trade concerned it is necessary that it should be able to command a considerable amount of information both as to the actual conditions prevailing in the trade and as to the probable or actual effects of any enactments which it may make.

It will be borne in mind that the trades scheduled under the Acts are generally those in which organisation is poor both among employers and workers, and consequently it may be difficult for either of these bodies to obtain information through their own Associations. It, therefore, becomes necessary that there should be at the disposal of the various Trade Boards persons who can obtain on their behalf all information necessary to them for the performance of their duties.

(2) *Organisation of Special Inquiry Work.*

Prior to the 27th July, 1921, this work was carried on by the senior members of the Inspectorate in conjunction with the general work of enforcement. From the above date, however, a separate staff consisting of three officers, drawn from the Inspectorate, has been appointed to carry out these inquiries and also undertake certain of the more technical cases of enforcement. Before 1919 it was the usual practice of Trade Boards before altering their determinations in any material particular, to ask that an inquiry be made into the effects which would be produced by such an alteration. Of late there appears to have been a revival of this practice.

(3) *Types of Special Inquiries.*

The majority of the Special Inquiries fall under the following headings:—

- I. Inquiries carried out with a view to the fixation of general Minimum Piece Rates either for indoor or outdoor workers.
- II. Inquiries carried out with a view to the fixation of Special Minimum Piece Rates for individual employers who have made application under Section 4 (5) of the Act of 1909.
- III. Inquiry carried out with a view to determining the hourly yield of rates (Category I or II) which have already been fixed but about which a conflict has arisen on the Trade Board as to their hourly yield to an ordinary worker. In such cases it is customary for the Board to postpone variation or other action on the rates until the Ministry has investigated the position and furnished a report.
- IV. The Ministry of Labour or a Trade Board may receive complaints that the operation of certain rates bears harshly on a particular class, either of employer or worker, e.g.:—
 - (a) Absence of rate differentiation between Retail Tailors' rates in respect of—
 - (i) good class Bespoke garments, and
 - (ii) low class garments worn by agricultural labourers.
 - (b) the high rates originally fixed for learners in the Dressmaking Trade, or that the rates fixed are bringing about a substitution of one class of labour for another, e.g.:
 - (a) female for male
 - (b) juvenile for adult, and
 - (c) outwork for indoor (factory) work.

or that an increase of wage rates beyond a certain point has an adverse effect on output.

(4) *Nature of information sought in Special Inquiry Cases.*

I. *General Minimum Piece Rates.*—These are often fixed after numerous tests have been made with a view to securing a uniform yield.

For the purpose of conducting these tests it is necessary in each case to:—

- (a) determine the output of "the ordinary worker"
- (b) weigh carefully all the "circumstances of the case" such as methods of work, materials used, tools, &c., as between one factory or workshop and another, to see that conditions are sufficiently alike to make comparisons possible.

(N.B.—The meaning of the phrases "ordinary worker" and "circumstances of the case" is more fully dealt with in the evidence on methods of inspection.)

II. *Special Minimum Piece Rates.*—The action to be taken in this type of case is that set out above for General Minimum Piece Rates, except that it is narrower in scope as only one establishment is involved. It is, however, very necessary to see that

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

rates are not fixed which will either penalise the employer in question with his competitors or give him an unfair advantage.

111. *Inquiry into yield of General Minimum Piece Rates already fixed.*—Similar points to those set out in (I) are involved.

IV. *Inquiry into effects of Rates already fixed.*—(a) *Upon special classes of employers.*—In these cases it has been necessary to inquire into such factors as:—

Transport;
Fuel;
Competition, etc.

and to distinguish very carefully between effects produced by Trade Board rates and those due to other causes, such as trade depression, or some tendency already at work in a trade, such as a decline of Retail Bospoke Dressmaking in favour of the Ready-Made trade.

(b) *Upon special classes of Workers.*—An allegation may be made to the Ministry of Labour or a Trade Board that a rate is causing unemployment amongst a certain class of worker, e.g., the instance quoted above that learners' rates in the Dressmaking trade were affecting adversely the employment of young persons in that trade. An inquiry into a matter of this kind would entail the collection of statistics as to the employment of the class of worker in question at various dates, and an analysis of the causes leading to dismissals.

(c) *On other matters, such as output.*—An enquiry into output involves much more than the mere collection of statistics. Output may depend upon a very large number of factors in organisation, all of which would have to be explored before the true effects of any influence exercised by Trade Board rates on output could be ascertained.

It is pointed out that a special inquiry is not a collection of statistics but it is an inquiry into many very vital and difficult industrial questions. It is felt that the information supplied by the Ministry of Labour to the Boards as a result of these inquiries may have a very material effect in assisting them towards a policy whereby changes productive of hardship to the worker and sometimes disastrous to an employer, faced not only by home but foreign competition, may be avoided. The rates fixed in such a way tend to give the maximum benefit to the worker without injuring trade.

OTHER CLASSES OF WORK DEALT WITH BY THIS SECTION.

In addition to the above inquiries, the officers of this section conduct investigations (a) dealing with scope, and (b) into cases of non-compliance which frequently involve technical or other difficulties. These cases principally arise from

(a) Difficulties in interpretation of Trade Board orders.

(b) Enforcement by inspection and through agency of Federations.

(a) i. *Definition of Terms.*—It is sometimes necessary to supply Trade Boards with information which will enable them to give in their Determinations an exact meaning to terms commonly used in the Trade. The members of the Boards of course possess a wide and accurate technical knowledge of the trade phrases and customs, but in these cases it is necessary by a careful examination of typical establishments to ascertain the precise practical effect of the adoption of the particular definitions of trade terms.

ii. *Determination of scope.*—Complaints may be received which relate to firms whose trade is not clearly included within the scope of a Trade Board or General Minimum Piece Rates having been fixed, the Trade Board definition does not describe the character of the work sufficiently clearly to enable the rates laid down to be enforced. Cases sometimes arise in which it is not easy to determine the Trade Board within whose scope a particular group of workers fall, e.g., workers making men's cotton clothing (dungarees, etc.), which may be considered to come within the scope either of the Tailoring or Shirt Making Trade Board. As these cases may involve making recommendations for the revision of the Trade Board Notices

or definitions of scope they need careful investigation. Consideration of the definitions of some of the trades will show how closely dovetailed many of them are.

iii. *Investigation of Contract.*—It may be necessary to determine whether certain workers can lay claim as employees to Trade Board rates, or whether they are employed not by way of trade or for purposes of gain (e.g., workers mending foot-gear for boys in a training ship), or are not under a contract of employment (e.g., the inmates of an institution who execute laundry work either for the institution or for the public). Such matters as the distinction between employees and pupils, between family and ordinary contracts, between the position of journeyman, sub-contractor, and outworker, may come under review in this connection.

It will be observed that the above mentioned work bears materially upon compliance and is of considerable assistance in furthering the general work of inspection.

(b) In addition to special enquiry work the experience of officers in this section is utilised to deal with certain inspection cases involving technical difficulties.

It is interesting also to note the action of some Employers' Federations in associating themselves with the inspectorate in the work of enforcement. The action taken by these bodies has largely been confined to that of complaining about non-federated firms. Latterly, however, we have received complaints in respect of their own members, and in one case a Federation furnished us with particulars showing that the whole of its members in certain areas had refused compliance. This Federation afterwards assisted the Ministry in securing the payment of wages arrears to the workers affected.

EFFECT OF TRADE BOARD LEGISLATION ON INDUSTRIAL EFFICIENCY.

Many employers frankly welcome the fixing and enforcing of minimum rates because they provide a basis for equitable competition by materially reducing, if not eliminating, that element of the trade which previously "cut" market prices by "trimming" the wages of its workers.

That the enforcement of these minimum rates has resulted in most employers acquiring a greater knowledge of the details of their businesses is beyond question, and may properly be attributed to one or more of the following factors:—

- (a) Realisation of the possibilities of increasing industrial efficiency by improved methods of working, thus maintaining rates of wages while reducing costs of production.
- (b) Sympathy with the Acts and anxiety to carry out their provisions.
- (c) Knowledge that non-compliance might incur liability for proceedings.

While it is true to say that each advance in the minimum rates causes a large number of employers to look around with a view to improving the organisation and equipment of their establishments, it is equally true that it has been a constant source of surprise to officers in the past to find how high a proportion of businesses are run on a "rule of thumb" principle. It is in respect of this class of case that the greatest difficulty is experienced in enforcing the rates laid down. If, for example, inspection in such an establishment discloses piece rates yielding, say, 20 per cent. below the minimum, the employer when informed of the deficiency would probably declare—

- (a) that his rates were as high or higher than those paid by his competitors on the class of work in question, and that the low output of his workers was due entirely to slacking on their part, and
- (b) that to be compelled to increase his rates would result in closing down his business.

In such a case it would be the duty of the officer to explain—

- (a) that piece rates must be valued according to the conditions existing in each establishment, and

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

- (b) that it is not always necessary to increase rates in order to increase their value, i.e., that workers' earnings depend almost as much on factory organisation and equipment as upon the rates themselves.

It not infrequently happens, however, in cases where the employer appears to lack the initiative or ability to determine for himself the defects in his factory organisation that it is possible for the officer to do this for him. In one case of this kind the officer found the rates in different departments were inadequate by from 9 per cent. to 26 per cent. The firm declared its inability to increase its piece rates and blamed the workers for slacking. Investigation into the cause of the low earnings showed that—

- (a) the factory engine was overloaded and consequently working badly and driving the machinery irregularly and at low speed;
(b) apart from (a) the machines, in many instances, were found to be in bad condition, i.e., belts on wrong pulleys and slack, etc.

After the inspection the firm called in competent engineers who remedied the defects complained of, with the result that in a few weeks' time the output of the respective departments had been increased to a point which enabled the workers to earn the minimum without practically any increase in rates taking place. The firm's directors personally thanked the officer for putting the factory on a more economical basis than was previously the case, and paid without protest the large arrears due to the workers as a result of the previous mismanagement.

Another type of case is that of a firm asking for inspection in order to have its organisation tested. In one case of this type suggestions, other than mechanical, were made which materially increased the factory output, with the result that piece-rates which at first appeared grossly inadequate proved adequate to yield the basis rate.

Some of the effects of Trade Boards legislation on industrial efficiency may be summarised as follows:—

1. Hours.

The provision that all time spent by a worker at an employer's premises for purpose of employment shall be paid for, whether the worker is actually working or not, has resulted in a more economical method of working through the elimination of waiting and other forms of non-productive time.

2. Departmental organisation.

The above provision has also resulted in improved organisation between department and department and has generally tended to speedier methods of manufacture, usually on sub-divisional lines. The obligation on employers to keep proper wages and time records and to fix their piece-rates on a definite and known basis has led many firms to make effective use of these figures in another direction, i.e., to use wages analyses as a measure of output variation either among individuals or groups of workers.

3. Training of learners.

The fact that many Trade Boards have provided in their determinations for the proper training of juveniles, together with the fixing of wages on a basis of age and experience, has undoubtedly resulted in a more careful and intensified method of training these workers than hitherto existed. When discussing the question of learners with employers it is common to be told "I have had to put the girls on more important work because they will be entitled to more money next month and I want them to be worth it." If it had not been for some such provision as the one in question it is possible that many of these workers might have been kept for years on some "blind alley" occupation.

4. Equipment.

There has undoubtedly been a big improvement in mechanical efficiency in those trades where

Trade Boards have been longest in operation, and it is safe to say that partly as a result of Trade Board legislation speedier and better types of machines are now generally in use as compared with those which obtained some few years ago.

12,607. *Chairman*: Miss Power, you are the officer in charge of the staff engaged on Non-Compliance Inspection under the Trade Boards Acts?—Yes.

12,608. Mr. Counsell, you are in charge of the Special Inquiry Section?—Yes.

12,609. We had better take Miss Power first. You first give us, Miss Power, information about the method of inspection?—Yes.

12,610. I gather that the work has considerably increased since the passing of the Act of 1918?—Yes, that is so.

12,611. That is partly due to the fact that Trade Boards now fix rates for overtime?—Yes, for overtime, and a guaranteed time rate for piece workers, and also have power to fix a piece-work basis time rate. Of course, the guaranteed time rate for piece workers exists only in a limited number of trades.

12,612. Very few, I think?—Yes. There is the laundry trade, the linen and cotton handkerchief trade and the brush and broom trade.

12,613. *Dame Adelaide Anderson*: Three trades?—No, I think there is one other. There are four trades. They are the laundry trade, the linen and cotton handkerchief trade, the brush and broom trade, and tobacco.

12,614. *Sir Arthur Pease*: Are there any powers with the Trade Boards, where a man or woman is not trying, that they should still get the guaranteed rate. If it can be shown that a man or woman is not doing his or her reasonable best, would they not still have to be paid their guaranteed rate?—It depends whether they are on time or piece work.

12,615. If it is a guaranteed time rate for piece workers, and if the employer says that the man or woman is slack, would the Trade Board say that he would not have to pay that rate?—(*Mr. Counsell*): He would be entitled to rates based on the piece-work basis rate, and also to the guaranteed time rate, but it would not be necessary for the employer to pay him a rate which would yield him at least the basis rate. He would suffer to the extent of his slacking. (*Miss Power*): He would get the guaranteed time rate, but he would probably fail to earn the piece-work basis rate.

12,616. *Chairman*: He would have to get the guaranteed time rate?—(*Miss Power*): Yes. Of course, the guaranteed time rate is lower than the general minimum time rate, and that is lower than the piece-work basis time rate, so that he would suffer on account of his slacking.

12,617. I am told that there is only one guaranteed time rate for adults. The others are for young people?—Yes.

12,618. Inspectors are required to report first on the posting of notices. They have become very much more numerous?—Yes, they are very numerous now compared with what they used to be. We used to have one, or at the most two, but now we may have a very large number. In the boot and shoe trade at the moment we have six current notices.

12,619. I suppose in some of the big shops where they carry on a number of trades they have a very large number?—If they came under a number of Boards they might have.

12,620. Then you inspect the wages and time records?—Yes.

12,621. Those have to be kept now, do they not?—Yes, they do. Employers have to keep such records of wages as are necessary to show that the conditions of the Act are being complied with in respect of the persons employed.

12,622. I suppose where a worker is employed in more than one trade, in occupations coming under more than one Trade Board, that is rather a complicated record?—Yes, unless his rate were the same under both Boards, or unless the employer paid the highest rate to which he was entitled for the full period of employment.

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

12,623. *Dame Adelaide Anderson*: Do they not usually resort to the plan of paying the highest rate throughout?—Yes.

12,624. Because it saves time and trouble?—It saves keeping two sets of records.

12,625. *Chairman*: And of course, overtime has also to be recorded?—Yes.

12,626. Then you have to investigate the rates of wages paid, and first the general minimum time rates. I suppose that is a fairly simple matter?—Well, I do not think I should be prepared to say it is always a very simple matter. It is not as difficult a matter as investigating piece rates, but there are a very great many time rates in operation, as you know, now, and they vary according to a great many factors.

12,627. But there is only one minimum time rate for each trade?—Yes, but there are different occupational rates.

12,628. By occupational rates you mean rates fixed for special classes of workers?—Yes, rates fixed for special classes of workers, that is, workers who would not be affected by the ordinary general minimum time rate. You can get these occupational rates based on age, as in tailoring, dressmaking, and the fur trade, or you can get them based on the length and nature of experience, as in the clothing trades, or the perambulator trade, or the coffin furniture trade; they may be based on the exact type of work which the worker performs where the work is under special definition, such as a measure cutter, where it is defined exactly what is meant by a measure cutter; or a rate may be fixed according to the organisation of the workroom, for instance, in the flax and hemp trade. Then there are certain rates in operation in the dressmaking trade; if there is a fitter who does no making up, there are certain different occupational rates in force.

12,629. You find out what a particular worker is?—You have to question the worker and the forewoman.

12,630. Does that mean you see every worker in the trade?—If it is a trade in which there are a number of occupational rates, you have to do so.

12,631. *Dame Adelaide Anderson*: You go right through the processes on the spot?—Yes. For instance, in a large dressmaking room you would have to find out primarily whether the fitter who is employed did, in fact, do any making up.

12,632. Really, it would be quicker to do it that way than to go through a number of records?—The records would not give you the information. The wages books would only give you the name of the worker.

12,633. The more you can see them at work the quicker you can grasp the duties they have to perform?—Yes, where there are occupational rates in force you have to interview the individual worker, and find out the exact conditions under which that work is done.

12,634. *Mrs. Lyttelton*: You have to know the exact limits of each?—Yes.

12,635. *Dame Adelaide Anderson*: You also in that way give the workers an easier opportunity for adding statements and making communications as to what they are actually receiving?—Yes.

12,636. *Chairman*: Do you get a statement from the employer also?—Yes. You ask the worker primarily, and the forewoman, and if there is any question of dispute you would ask the employer as well. It depends on the size of the firm. You would not ask the employer in a large wholesale works as to the individual occupation of one worker, because he probably would not know.

12,637. *Mrs. Lyttelton*: Your would ask the forewoman?—We would ask the forewoman or the foreman in that particular department.

12,638. *Chairman*: You do not get a record of the wages paid?—You take an extract from the wages book, but that does not give occupations. In large firms you find machinists and finishers divided; but that is only in very large firms.

12,639. I suppose you ascertain sometimes that the worker is underpaid?—Yes.

12,640. Then you take a written statement from the worker?—Yes, as to age and length of experience, and exact occupation, exact hours worked, and wages paid, and time off.

12,641. *Dame Adelaide Anderson*: There are samples of that shown in your Statement?—Yes, you will find samples of it in the Appendix. It is particularly necessary to get a signed statement of that sort if the records are inadequate, and there is any dispute as to what exactly are the hours worked and the wages paid for any specific period.

12,642. *Chairman*: You sometimes get a question as to who is the employer of a particular worker?—Yes, that may happen. It generally happens in wholesale firms, where one of the assistants will bring in with him subsidiary workers whom he pays, and whom he employs. He brings them into the firm on his own responsibility. You get that in the East End clothing firms.

12,643. Supposing you find that a worker is underpaid, what do you do?—Do you mean a worker who is brought in by another worker?

12,644. No—a worker of any kind. Do you speak to the employer or report it to the Ministry?—You report it to the Ministry, but you inform the employer. You do not call for the arrears of wages due.

12,645. You do not do that?—No. In the old days, that is to say, prior to 1918, a very great deal of enforcement was done on the spot by the inspectors, but that has not been done since 1918. Now the inspector reports in detail all cases of underpayment. He informs the employer, and the Ministry takes enforcement steps to procure payment of the arrears due.

12,646. Is the employer ever told what the arrears are?—Yes, he is told them where it is easy to make the calculations on the spot, but it is not always easy to do so. They are very often elaborate calculations.

12,647. *Mrs. Lyttelton*: Was that what caused the powers to be transferred to the Ministry?—One of the reasons was that we had a large number of inspectors working for us who did not receive any training, and we found in certain cases they were not sufficiently clear, and inaccurate information was given which might have serious consequences. That is particularly so in the case of occupational rates. It might be possible for a mistake to be made as to which rate a worker was entitled to, and any calculations of arrears might be wrong.

12,648. *Dame Adelaide Anderson*: That means a greater delay, not promptly dealing with them in a sort of summary method on the spot?—It means a certain amount of delay.

12,649. *Mrs. Lyttelton*: Does that apply also to the intermediate employer? Do the arrears that are necessary to be paid in his case have to be referred to the Ministry too?—Yes, all questions are referred. The inspector makes the report and refers to the Enforcement Section.

12,650. *Chairman*: Is the employer told: "You are in arrears with that worker"?—He would be told the actual sum due if the calculation could be made, but sometimes it cannot be made.

12,651. The complaint would be made that the employer sometimes does not know how much he is alleged to have underpaid, and may not know that for months after the visit of the inspector?—I do not think months after; it might be one month after. In most cases the delay is not as great as that. In some cases there are very big calculations of arrears to make, and you have to make allowances for lost time on account of the worker coming in after a mealtime a quarter of an hour late, or losing time for sickness or holidays. All that has to be calculated back over the complete period of underpayment. That period may extend to a year.

12,652. *Mrs. Lyttelton*: Is there any limit at all?—May it extend 20 years?—No, because no rate has been in force for 20 years.

12,653. It is only since the Trade Boards came into existence?—You would not go back beyond that.

Mrs. Lyttelton: No, you would not.

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

12,654. *Dame Adelaide Anderson*: The inspector must take the particulars necessary for basing his calculations?—Certainly he must.

12,655. It is quite possible to let the employer see the particulars?—You always give the employer the basis.

12,656. In that case he is just as able as, perhaps better able, to arrive at the truth than the inspector?—He will make his own calculation, and if that disagrees with the amount claimed by letter he would probably say so with some force.

12,657. It would probably be adjusted by some fresh visit?—Either by correspondence or a fresh visit.

12,658. *Mr. Poulton*: But suppose he refused to accept your decision? Suppose he said you were wrong, and you were quite satisfied that you were right? Who would you go to then?—If you claimed the wrong rate for a worker, do you mean?

12,659. Yes?—If we were of opinion—

12,660. If you were of opinion that you were right and he was just as strongly of opinion that he was right, who would you appeal to then?—We could not go anywhere except to the Court.

12,661. That is to say, you could not appeal to the Department?—You would have the Department's opinion in any case if there is a dispute.

Chairman: It would go to the Court, I suppose.

12,662. *Mr. Poulton*: Both might be *bona fide* wrong?—That is the only resort at the moment.

12,663. Then you would depend upon a question of law?—Yes.

Mr. Poulton: It might not be a question of equity at all.

Dame Adelaide Anderson: Surely two people, both anxious to get at the facts and come to a right conclusion going through the matter point by point, could adjust it?

Mr. Poulton: I could conceive a case of the kind I suggest because I have had such cases.

Dame Adelaide Anderson: Where you had a decision?

Mr. Poulton: Yes, where it was not a question of attempting to evade on the one hand or trying to take advantage on the other hand.

12,664. *Chairman*: Do you deal with permit cases at all?—With very few. We used to deal with all, but now the Administrative Committees deal with the majority of them, and they refer to us only special cases. We have an agreement with the Boards that I shall look at the cases, and if I cannot guarantee an investigation of them within two months I return them to the Boards. We have not a sufficient staff to make investigation in all permit cases, because you will understand they are only in respect of one deficient worker, and it may entail a lot of time in travelling in order to investigate the case of one worker.

12,665. I think the Boards look into the cases themselves?—The Administrative Committees of the Boards.

12,666. Some member of the Committee goes down and sees them?—Yes. Where there are permit cases is very isolated places it has increased our difficulties. We have had certain milk distributive cases which have involved the time of an inspector for two days.

12,667. It is no longer your business to do that?—I am supposed to get the more difficult ones that are referred to me done if I can.

12,668. *Mr. Poulton*: It makes it very expensive in the working out of the Act if you have to spend two days in travelling?—That is an exceptional case that we might get.

12,669. *Sir Arthur Pease*: Would they be exceptional? You might easily get cases in the North of Scotland and have to send an inspector from London?—For the most part they are done by Administrative Committees.

12,670. If there were a difficult case you would have to send someone?—Not necessarily. It is left to me to say whether I can guarantee an investigation within two months.

12,671. What happens if you cannot?—It is left to the Administrative Committees of the various Trade Boards.

12,672. *Mrs. Lyttelton*: Is it apt to put more and more on the Administrative Committees of the Boards?—Yes.

12,673. *Sir Arthur Pease*: It does seem to me very expensive to have to send an inspector hundreds of miles to look into one case?—That does not often happen.

12,674. *Dame Adelaide Anderson*: Have you no localised staff?—Yes, I have eight inspectors localised, one at Edinburgh, one at Glasgow, one at Newcastle, one at Leeds, one at Manchester, one at Doncaster, one at Plymouth, and one at Cardiff.

12,675. And they have others working under or with them?—No, they are working quite alone. We have not a sufficient trained staff at the moment to make any big measure of decentralisation possible.

12,676. But you are always training people, I suppose?—We are training them, but we do not necessarily retain them.

12,677. *Chairman*: So far, we have been asking you about time-rates. You also have to check piece-rates, of course?—Yes.

12,678. I suppose where the piece-rate is fixed by the Board as a piece-rate the difficulty is not so great as in other cases?—You mean the general minimum piece-rates?—Yes.

12,679. They are not so difficult as piecework basis rates, but there are difficulties even in those, because there are a very great number of piece-rates. For instance, the brush and broom trade has, I think, 1,200, and the boot and shoe trade 500; and the officer has to be sure that the piece-rate is actually as scheduled. I think I can give you an example which explains that. I had a very insistent complaint some time ago from a fur trade union that a certain fleshing rate which was being paid to workers at a big firm was inadequate. It was found on investigation that the workers were being paid 2d. a dozen less than that rate as scheduled under the Act. They were actually only fleshing the backs and sides, and were not fleshing the necks. The result was that the 2d. deduction was made for the other worker who fleshed the necks, but the piece-rate did not apply, because the operation was not as scheduled. You would have to make a careful investigation to find out why the particular piece-rate as scheduled did not apply.

12,680. *Mr. Poulton*: In that case was the complaint made by the Trade Union itself?—The complaint was made by the Trade Union itself. They maintained that the piece-rate as scheduled applied.

12,681. *Mrs. Lyttelton*: Were they convinced?—They were not convinced when we wrote to them, but they had a deputation afterwards at which one Union member managed to convince the other that it was so.

12,682. *Chairman*: How do you get the particulars as to what the worker has done on what piece-rates?—You would have to enquire from the workers and the forewoman and the employer.

12,683. Do you see every worker?—The majority of workers. In a case of that sort the pieceworker's book would not reveal the fact that the operation was not as scheduled. It would be booked up according to price, and the inspector would have to make inquiries.

12,684. It would take one of your inspectors some time, I suppose, to inspect a whole factory?—Yes, very often.

12,685. *Sir Arthur Pease*: Two or three days, do you mean?—Very big firms sometimes take as long as that if there are infractions.

12,686. Do you have many complaints in which there is nothing when you come to determine them?—We send a questionnaire out now to everybody who sends in a complaint asking them to fill up certain questions. The result is that the complaints we

15 February, 1922.]

Miss Power and Mr. W. E. COUNSELL.

[Continued.]

investigate now are certainly all *bonâ fide*, because we have obtained this form from the worker first giving particulars. We do not investigate until on the face of it there appears to be a case.

12,687. Until there is a *prima facie* case?—Yes.

12,688. *Chairman*: In some cases there is no piecework rate but a piecework basis time-rate?—Yes.

12,689. In those cases how do you ascertain whether the piece-rates are fit and proper?—I think I have given that at some length in my printed evidence. You first of all separate out your workers according to groups. For instance, in large clothing firms you would have to sort out your pieceworkers into vest room, coat room, and trouser room, and again into occupations, machinists, finishers, etc., and into the various sub-divisions of these groups. Then you question each of your workers, and you rule out those who are obviously sub-ordinary, either on account of inexperience, or ill-health, or old age, or anything of that sort. You grade your workers according to their earnings over a period, generally of four weeks, taking a representative period; then the lowest worker who is not sub-ordinary is taken as the ordinary worker in normal circumstances.

12,690. The lowest?—Yes.

12,691. Why is the lowest the ordinary worker? Why not the average?—Do you mean the average other than the sub-ordinary workers?

12,692. Yes?—If you were to take the average worker it would vary from factory to factory; also you would have a very strong inclination on the part of the employer to sack the slower workers and take on as quick workers as he could, because that would put up his average.

12,693. *Mr. Poulton*: Supposing in a room of 20 there were 16 able to earn the rate, and 4 were not. Would you still say the rate was wrong, or would you say that the 4 were wrong?—It would depend on those four. You would not necessarily rule them out as sub-ordinary unless they were sub-ordinary for a specific reason.

12,694. You would not say because 16 out of 20 could earn the rate that necessarily the rate was correct?—Not necessarily.

12,695. *Chairman*: Or even 19 out of 20? The presumption would be, in a case of that sort, that the 20th was sub-ordinary—was a slow worker.

12,696. We are assuming you have ruled out all those who are sub-ordinary and have only left those who are not subject to that particular reproach. You take the worst of all the rest as the ordinary worker?—The others would be better than ordinary under the conditions prevailing.

12,697. *Mrs. Lyttelton*: The endeavour is to save as far as ever you can the least good of the workers from being sub-ordinary and being paid a sub-ordinary rate? You want to get the level as low as you can with justice?—The piece-rate has to be such as will yield the worker in the ordinary circumstances of the case the piecework basis time-rate. If you rule out all workers who are not ordinary on account of inexperience, or ill-health, or any obvious reason, then in the circumstances of the case the first worker above that should be the ordinary worker.

12,698. *Mr. Poulton*: But supposing you went to a number of factories and found that they could earn the rate on the scheduled rate, and then you found a factory such as I mentioned where 16 out of 20 could not earn it; would you still say the rate was wrong?—That is where the circumstances of the case come in. You do not necessarily, in fact you very seldom, have the same circumstances prevailing in different factories.

12,699. *Dame Adelaide Anderson*: There are different methods, different machinery and implements, and different material?—You might find two workers similar in training, health, and experience in two neighbouring factories both paid the same rate and yet one would fail to earn the minimum and one would achieve it on account of the differing circumstances of the case, namely, the machinery, or lighting, or the method of dividing the work.

12,700. *Mr. Poulton*: But where you have 20 people in the same room that would not apply, because they would all be subject to the same conditions?—(*Mr. Counsell*): It would all depend on whether the four were ordinary workers or sub-ordinary. If it could be shown that the four workers were not sub-normal at all but were ordinary workers, then the rates for the whole group would depend on them.

12,701. But the rate for the whole of the industry would have to be altered if it was a scheduled rate?—By "scheduled rate" you mean a general minimum piece-rate?

12,702. Yes.—I thought you were referring to the piecework basis rate. (*Miss Power*): We were referring to the piecework basis rate. (*Mr. Counsell*): It would not matter at all what the earnings of the workers were if they were paid a general minimum piece-rate. It would not matter whether two only earned the minimum and 18 of the 20 fell below, so long as they were getting the piece-rate prescribed.

12,703. *Chairman*: Oh, yes, we are dealing with the point as to how you find out whether the piece-rate is adequate to enable an ordinary worker to earn the piecework basis time-rate?—I think *Mr. Poulton* was referring to the general minimum piece-rate, and you were referring to the piecework basis time-rate. I think that is the position. I think there has been some confusion.

12,704. I think *Miss Power* understood what I was referring to?—(*Miss Power*): You were talking about the piecework basis time-rate, but *Mr. Poulton* was talking about the general minimum piece-rate.

12,705. I was trying to find out how you ascertain whether the piece-rate, in fact, paid by an employer was sufficient to enable the ordinary worker to earn the piecework basis time-rate. You appreciate that?—Yes.

12,706. Do these people know that they are being tested?—You mean when actual time tests are made?

12,707. Yes?—It is possible in a factory to make tests without the worker being aware of it.

12,708. Is a worker generally unaware of it?—Not necessarily.

12,709. You do not think he is, sometimes?—Sometimes the tests are made by the inspector, and then, of course, the worker is aware of it.

12,710. When the workers know it, what is to prevent them from seeing that one or two of the workers, who cannot be, of course, sub-normal, do not work too hard?—The inspector's experience comes in. He has a good deal of comparative evidence of similar work in other factories, and he has a knowledge of the speed at which workers can work. Both those factors come into it. I have done a great many tests on home workers, for instance, and it is perfectly impossible to test a home worker without their being aware that they are being tested.

12,711. In the case put by *Mr. Poulton* you have an answer, because the four might be slacking, so to speak?—You would rule out their test.

12,712. You think you would detect that?—Yes, with the aid of comparative evidence. You would not make only the one test; you would make a number of tests; and you would not necessarily test workers on the same work at the same time. You would make a variety of tests; you would split the workers up and put them in different parts of the room and test them on different things.

12,713. *Mrs. Lyttelton*: You are satisfied that it works out pretty fairly?—Yes, when you get an experienced inspector engaged on the work of testing. (*Mr. Counsell*): Might I give an illustration of that—a fairly recent one? A complaint was made that the piece-rates in a certain factory were not yielding the piecework basis rate. Inspection showed that a large majority of those pieceworkers were, in fact, earning much less than the minimum, and, on the face of it, the piece-rates were unsatisfactory. Questioning the employer, however,

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

he stated that he could not understand why the earnings of the workers were not higher than they actually were, because some 12 months ago, on similar work, the output of the workers had been very much greater than over the period tested. The inspector turned up the records and showed that during the period in question—that is the period 12 months before the actual inspection was made—the very same workers had given an output which was, I think, something like 15 to 20 per cent higher than that over the period under immediate review. The workers were challenged, and they admitted that it was true, and there was no change in circumstances for which the employer was responsible, and that the apparent under-payment was due to lower output on their part. They were told that the piece-rates appeared to be adequate in spite of the fact that a very large percentage of them were not earning the minimum. Soon afterwards another inspection was made, and it was found that the output had swung back to what it was pretty well 12 months before.

12,714. *Sir Arthur Pease*: It was what you call a "try on"?—It was.

12,715. *Mr. Poulton*: Do you find any objection amongst the workers when they know that tests are being applied?—Sometimes they welcome them in the hopes of getting higher rates. Other workers will jump the other way, and try to curry favour with the employer by working as hard as they can. One has to be very careful in making the tests.

12,716. *Chairman*: Altogether the checking of piece-rates seems a very complicated matter, Miss Power?—(*Miss Power*): Yes, it is not a simple matter at all.

12,717. Suppose you find an employer wrong, I suppose he gets warning and he alters his rates?—Yes, or he alters the circumstances of the case sometimes, so as to prevent the necessity of having to alter his piece-rates, if he is able to alter his organisation in such a way that the workers' output is improved.

12,718. It means that he gets better machinery or makes a better sub-division of the work?—Yes.

12,719. *Dame Adelaide Anderson*: Or that he arranges for a quicker supply of work, so that there is less waiting?—You might have the finishers held up periodically waiting for the work to come from the machinists; but you should ensure a better balance.

12,720. *Mrs. Lyttelton*: And the inspector is able to suggest methods?—The more skilled of the inspectors may do, but that is a matter of considerable length of experience. Our junior inspectors would not necessarily be able to do that in all circumstances.

12,721. *Sir Arthur Pease*: Of course, balance of work is one of the most difficult things to do, even in well-organised businesses, because the work done in one shop may be much more rapid at one time than at another. It is not always the fault of the employer, I suppose?—That is so.

12,722. *Chairman*: Sometimes you get what you call "dead horse." I gather?—Yes, we have had cases, for instance, where workers appeared to earn the minimum, but it was found that they would be some-time one or even two weeks in arrear in working off work for which they had previously been paid.

12,723. *Mr. Poulton*: Do you find much of that obtaining now?—No, I think the Trade Boards Acts have done away with a great deal of "dead horse." It is the exception now instead of the rule.

12,724. *Sir Arthur Pease*: A very great exception, do you not think?—No, I should not think a very great exception. It is nothing like as common as when the Trade Boards Act first came into operation.

12,725. *Dame Adelaide Anderson*: Did you come up against deductions for damage in the earlier stages of applying the minimum rates?—I came across it considerably in the lace trade.

12,726. And in the pen trade?—We do not cover the pen trade.

12,727. *Sir Arthur Pease*: Have you come across any cases where the people slackened on one week so

as to be on the minimum, and then worked very hard the following week to get well over it?—No, that is not my personal experience. I do not think that is common.

12,728. *Chairman*: You give us an example, I think, of a Statement as to piece rates?—Yes, in Appendix I. (B). It is a specimen of a laundry inspection.

12,729. It is in very elaborate detail. It is followed by some comments apparently?—Yes.

12,730. Home workers, of course, are always paid by piece?—Yes.

12,731. Does your inspector go and see the home workers?—If there is any question as to the adequacy of the piece-work rates paid.

12,732. You get a list of them?—From the out-worker list which the employer should have. The employers have to notify to the local authority the out-workers whom they employ, and they have a list hanging up in the office.

12,733. Then the inspector goes to see the home worker; does he get from the home worker particulars of the work done and the prices paid, if there is any question as to the adequacy of the piece rates paid. Sometimes different work is given out to the home worker from the work which is done in the factory. For instance, in the box trade it is customary to do the bigger boxes inside, and to give the smaller boxes out to the out-workers. Then you may not be able to get comparative evidence from the earnings of the indoor workers, and you may have to go to the out-workers personally.

12,734. You conduct a test in the case of home workers?—You have to see a number of home workers in order to make sure that the workers you test are ordinary workers, because a very great number of out-workers are elderly people, or people who for one reason or another do not want to work indoors. You make tests of as long duration as you can, not allowing interruptions in the way of getting up to look after the baby, or to put the kettle on, or to get a meal ready, or anything of that sort; and you compare those tests. You have to be particularly careful in testing the out-worker to see that the test is a fair one, and that the worker is not working slowly on account of the fact that she knows that she is being tested. You may have to discard a certain number of tests.

12,735. It is difficult, of course?—It is difficult, but a very great deal of work has been done on it. I have myself made nearly 500 tests on out-workers in the lace trade, and I found I had to discard about 15 per cent. to 20 per cent. of the tests I made. The general minimum piece rates were very largely fixed on the results of those tests.

12,736. *Sir Arthur Pease*: In comparing the piece work rate in a factory and the piece work rate of a home worker, would one be higher than the other as a rule for the same operation?—You mean if the workers were doing the same thing indoors and outdoors?

12,737. Would it be either way?—It might have to be a higher rate outdoors because you may have to have a worker working on a treadle machine at home, whereas there is a power machine in the factory. In the circumstances prevailing a higher rate might be necessary outside.

12,738. Supposing it was simply a case of sewing with the hands—leaving out machinery—would there be any difference?—Only if the home worker had to supply her own thread. In the case of an indoor worker, it would probably be supplied by the factory. For instance, in the box trade the out-worker has to supply her own string and glue—which is supplied indoors. She might obtain it at retail price, or she might obtain it at wholesale price from the employer.

12,739. *Dame Adelaide Anderson*: Because you cannot calculate exactly the amount necessary for the particular job?—You cannot, certainly, in the case of glue. The worker would only be given the right amount of material cut up for making the boxes,

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

but you could not give out precisely the amount of glue for so many gross of boxes.

12,740. And she has to find the glue?—Yes, and she has to be paid the piece rate which would yield her the piece work basis rate clear of all deductions other than the National Health Insurance.

12,741. *Chairman*: Even then you may have to test piece rates to see whether they come up to the general minimum?—Yes, if no general minimum piece rate is in operation.

12,742. *Sir Arthur Pease*: You would not allow the home worker anything for having to provide a place to work in as against the factory?—We have not done so. (*Mr. Counsell*): Not as yet.

12,743. *Dame Adelaide Anderson*: And light and heat?—(*Miss Power*): No.

12,744. She balances all that against the convenience of being able to work at home?—Yes. (*Mr. Counsell*): There is one item, I think, where allowance has been made, and that is for gas in the heating of a glue pot.

12,745. That is for using gas directly in the production?—That is right.

12,746. Does it take a great deal more time to arrive at these conclusions from the investigation of home workers than it does in the case of workers in the factory?—(*Miss Power*): Yes, on the whole.

12,747. But it can be done?—Yes, but you may have to visit a very great number of out-workers before you get together a sufficient selection of ordinary workers upon which to make your test, because so many home workers are sub-ordinary workers.

12,748. It may take from a week to two or three weeks to arrive at a conclusion?—Yes.

12,749. But once done you have the material?—You have the material, yes. Of course, the longer a trade stays under a Board, the bigger amount of comparative evidence you collect, and the sooner you may be able to test whether an out-worker's piece-rate is adequate. We have, of course, now a considerable amount of comparative evidence in the older trades.

12,750. *Chairman*: Do you deal with waiting time at all?—Yes.

12,751. How do you get particulars as to that—from the worker, I suppose?—From the worker or from the forewoman. It is a matter of very close questioning where complaints are made about waiting time.

12,752. I think the worker is now entitled to be paid?—On a time-rate basis.

12,753. On a time-rate basis if he waits with the consent of the employer?—Yes.

12,754. It has been suggested to us that that provision might be altered, so that he would only be entitled to be paid if he waits at the request of the employer. Can you throw any light upon that point?—We do get cases that are difficult to investigate.

During trade slackness an employer may tell his workers that he is not expecting any more work to come through until the afternoon, and the workers are free to go home. But the workers may say that they prefer to stay on the premises on the chance of work coming in. Waiting time would not be claimed for those workers in respect of that time.

12,755. Why not, if the employer says: "Very well, you may wait if you like," because then he would have consented?—They have been free to go home; they have been told that no work is likely to come until the afternoon.

12,756. Still, on the terms of the Act they would be entitled to be paid because they had waited with the consent of the employer. Is not that so; that is my recollection of it?—Yes.

12,757. Do you think any real harm would be done if that were amended so that they were only entitled to be paid if they waited at the request of the employer?—No, I do not think so. It is not a thing that we have pressed very much of late during the slump, because a number of workers have wanted to wait on the firm's premises in order to share in any work that was likely to come through. If the employer had to pay for such waiting time, he might dismiss practically all his workers and just

keep on one or two whom he could employ for the full time.

12,758. *Sir Arthur Pease*: We have also had evidence to show that employers have provided a room, warmed and lighted and heated, for the workers to wait in, when they have had nowhere else to go?—We have had cases of employees sitting there and doing their own work. We could not claim waiting time in respect of that.

12,759. *Chairman*: I gather you also get questions of interpretation—that is on demarcation?—Yes.

12,760. You give some examples of that where a workshop is covered by more than one Board, and there is some doubt as to which work the worker is doing. One example you give is, where a worker employed by a drapery firm on alterations to ready-made tailored and non-tailored garments for female persons will come under rates fixed by the Wholesale Mantle and Costume and Dressmaking and Women's Light Clothing Trade Boards?—Yes.

12,761. I see you give a special case of a textile firm, who may weave on the same loom webbing made from flax with hemp, jute with hemp, wool with hemp, jute with cotton, and pure cotton?—Yes, that is a more exceptional instance. The greatest difficulties arise in the clothing trades. One of the chief difficulties is whether garments are tailored or are not tailored. You may get a firm who advertise that they supply tailored costumes. When they come to be inspected they say they come under the Dressmaking Board, because the garments are not in fact tailored. We have had a considerable amount of difficulty in determining exactly what constitutes tailored garments.

12,762. *Sir Arthur Pease*: What is the difference?—*Mr. Counsell* is an expert on that; I think he will tell you. (*Mr. Counsell*): I think I would rather be excused. I am afraid it is too technical for me. We have, with a number of the employers, drawn up the schedule, and there is general agreement that if the garment is made up by certain of those processes it can fairly definitely be termed to be tailored. I can think there are about eight operations: (1) If the garment is not by an experienced cutter; (2) if the garment is basted in the way that a tailored garment is commonly basted; dressmaker-made garments are not basted as a rule; (3) if the garment has stays, is padded, and has canvas, hair cloth, and all that sort of thing, which is common to men's tailored garments, but not common to the dressmaking trade. There are a number of other factors like that. If there are two or three of those items included in the garment which the employer calls "dressmaker made," we should think it was not dressmaker made; that it was more closely allied to tailoring than dressmaking; and we might attempt to enforce the tailoring rates.

12,763. *Dame Adelaide Anderson*: Are they higher?—They are higher.

12,764. *Chairman*: I suppose there is something of a case for combining all these clothing trades under one Board?—It would be very helpful for administration.

12,765. May you not also get the case of a porter in a house which does two trades?—Yes.

12,766. I suppose it is very difficult to say which trade he is portering for?—(*Miss Power*): Yes, I think we have given an example of that.

12,767. You also deal, you say, with other infractions of the Acts, such as the production of false records and receipts, and the concealment of workers. Has that ever happened?—Yes, sometimes. I have seized a worker by the hair through a trap door.

12,768. *Mr. Poulton*: Have you any cases of the production of false wages sheets?—They are not common, but we have had a number of cases of false records, and we have taken proceedings.

12,769. *Dame Adelaide Anderson*: Have you had exemplary penalties enforced in those cases?—(*Mr. Counsell*): Yes, we had one employer sent down for three months' hard labour, and we have had three

15 February, 1922.]

Miss POWER and Mr. W. E. COUNSELL.

[Continued.]

other employers in London given six weeks' imprisonment without hard labour.

12,770. It is really the most serious thing that can happen, the deliberate falsifying of records?—Yes. I might say that where the employer got three mouths' hard labour it was a case not only of furnishing false records, but the employer actually forged the workman's signature to a receipt for arrears.

12,771. The concealment of workers may be, unless it is a deliberate act, a sudden impulse?—(Miss Power): Of course, it is easier to get concealment of workers in trades carried on in, for instance, an employer's own house. In the case of small dress-makers, it is very easy to put a girl into a bedroom while the inspector is in the little workroom. We had an instance of that the other day, when five girls were bundled into the employer's bedroom when the inspector came. As the employer kept no records, the inspector might have been unaware of the existence of those workers.

12,772. *Chairman*: I think you mention cases of collusion between employers and workers. Does that mean that the worker is willing to take a lower wage?—We have had cases of that recently within the last year, during the trade slump. We have had workers who have agreed with an employer to accept less than the Trade Board rate, and afterwards they have come and complained to the Ministry that they have not received the Trade Board rate.

12,773. *Mrs. Lyttelton*: They have done that through the threat of dismissal. It has happened like that?—Yes, but it is only lately during the trade slump that we have had this difficulty of workers who have actually agreed and then have lodged a complaint.

12,774. *Chairman*: They have agreed to that rather than lose their work altogether?—Yes, because they have no alternative. The employee takes that or nothing.

12,775. *Mr. Poulton*: Have you any cases of the proper rate being paid and a portion of the wage being handed back?—Yes, we have had instances of that in the chain trade, where trade has been terribly slack for the last two or three years. (*Mr. Counsell*): We have taken proceedings in cases of that kind.

12,776. *Dame Adelaide Anderson*: There has been real collusion there?—There has been real collusion.

12,777. The worker has induced the employer to take it back?—No, the employer has more or less asked for it. (*Miss Power*): There is very little work going on, and the employer will give work to the worker if he is ready to give back a percentage of his wages. At a place where we sent two inspectors to make investigations we found the workers were terrified that the unions would get to know that they were giving a percentage back. But there was very little work for a large number of workers.

12,778. *Sir Arthur Pease*: What would happen where it is proved that they are giving any of it

back?—If the employer is only paying the bare minimum rate and the employee is giving back a certain percentage, the employer is contravening the Act, if we can prove that the employer is in collusion with the worker, which would be the case if the employer accepted the money.

12,779. Supposing a man is entitled to £3 and he voluntarily pays back 10s., he can be prosecuted?—(*Mr. Counsell*): He has been prosecuted and convicted.

12,780. *Chairman*: There has been an agreement beforehand?—(*Miss Power*): It is not a voluntary repayment. A worker would not voluntarily give money back.

12,781. *Dame Adelaide Anderson*: The wage is free of all deductions?—Except the National Health Insurance, yes.

12,782. What is your course if you do find deductions for damage? Do you inform the factory inspector?—I have done so in Nottingham, which is the only case in my own experience.

12,783. *Chairman*: Then with regard to proceedings, the inspectors prepare the cases for proceedings, and lay informations, and at one time conducted the cases?—Yes.

12,784. I gather that since 1920 the inspectors have not done that work, except the drawing up of the summonses and laying informations?—Yes. They are generally the chief witnesses. The cases have been rather more elaborate lately and rather more bitterly contested than in the old days.

12,785. *Dame Adelaide Anderson*: Can you compare the success in practice between those periods of the two methods, where the inspector is conducting his or her own case, and where there is expert legal assistance in conducting the case, as has been the custom since 1920?—The inspector has the pull on a solicitor or counsel in the matter of technical knowledge, but the solicitor or counsel has the pull on the inspector in the matter of legal knowledge.

12,786. He has the pull in the matter of procedure, and what is the law of evidence?—Yes. We have had cases lately which have largely depended on legal knowledge rather than upon technical knowledge.

12,787. So that you cannot really compare them from the point of view of success in results; the circumstances are so changed?—That is so. The political atmosphere is different.

12,788. But in simple cases do inspectors still conduct them themselves?—In the last year they have all been conducted by the solicitors of the department, but then only very large cases have been taken. (*Mr. Counsell*): The two periods are not strictly comparable. At one time, no matter how badly an officer conducted his case, the employer had something to answer before the case was opened. He was charged more or less with sweating, and in the handling of the case the magistrate was anxious to get out the facts. The magistrate helped you. But to-day he does not.

12,789. The whole atmosphere is changed?—Yes.

(*The Witnesses withdrew.*)

Sir ARTHUR PEASE took the Chair.

Mr. HENDERSON NEAL, called and examined.

12,790. *Sir Arthur Pease*: You have asked us to hear you because you have some different points of view you wish to put forward as compared with Mr. Crabb. Would you just tell us what the points are you wish to draw to our notice?—You will find them stated in the memorandum which I have handed in.

12,791. You say, first of all, that the statement that the Trade Board is primarily responsible for raising the status of the boot repairing industry is founded on a false premise. Would you develop that?—The wages in the boot repairing industry had reached not quite the stage at which they were taken by the Trade Board scale. I am speaking generally, of course. They had reached a very much higher scale than was ruling prior to the war, before the

Trade Board Act became operative. The whole contention, I think, has been hitherto that the Trade Board is responsible for the present rate of wages paid, and has raised the trade from a sweated industry. I suggest that it has been raised by the operations consequent upon the war and the shortage of labour. The law of supply and demand had rather more to do with it.

12,792. Shortly, you say that it was a natural rise, and not due to Trade Boards?—That is so, in the main.

12,793. *Mr. Poulton*: What part of the country would you say that applied to particularly?—I think one must say that it applied more in the small towns in the rural areas rather than in the biggest cities, because the rate of wages in the large cities

15 February, 1922.]

MR. HENDERSON NEAL.

[Continued.]

was, on the whole, rather higher than in the rural districts.

12,794. Would you agree that the raising of the wage was more particularly in the big industrial centres North and North-West?—You are speaking of England?

12,795. Yes.—I do not know that I would like to agree with that without more investigation. It is rather a difficult question for me to answer without investigation.

12,796. Would you say that the rate had gone up in the South and South-West to any extent?—Certainly, the rate has gone up in the South of England.

12,797. I am now talking about the time before the Trade Boards?—Certainly, before the Trade Boards.

12,798. To any extent?—Yes, to a very appreciable extent.

12,799. That is not my view?—I can only give you this example.

12,800. I am talking generally. I am not talking of an odd case or two.—I know what the experience has been in my own repairing factory. Of course, repairing is not the primary interest I have, although we have a large repairing factory. I think it fairly represents London for its class, and our experience has been that the alteration which had to be made in the rate of wages when the Trade Boards became operative was trivial in the extreme.

12,801. *Sir Arthur Pease*: I think we understand your view on that point. The next point which you raise is with regard to the delays. We have had so much evidence on that, that I think we need not follow it any more?—Quite.

12,802. In your point No. 3 you draw attention to the necessity for a differentiation between the country and London and similar cities. What do you wish to say on that?—I think it is obvious that the cost of everything in a large city is quite different to the cost of the necessities of life in the small towns, and still more so as compared with rural districts. At present we have a fixed rate all over. Quite apart from the merit of the rate at all, it seems absurd to pay a man in London the same rate as a man in a rural district, where his expenses are so much smaller.

12,803. *Mr. Poulton*: But that is the minimum rate, is it not?—If you wish to term it so.

12,804. There is nothing to prevent an employer paying above that rate?—I agree. That rather opens up an avenue of discussion as to whether the minimum rate is correct for the towns and too high for the country.

12,805. I know, but it is a minimum rate?—If you so term it. It is the lowest rate that can be paid anywhere, and I say it must be wrong either in one case or the other, because I think it is usually contended when you fix a rate of that sort it becomes the rate applicable to a very large percentage of labour. I think that is the usual contention.

12,806. It is a minimum rate?—If you fix a rate of, say, 60s. a week that becomes a sort of standard.

12,807. You know that the rate was fixed largely following the productive side of the trade. You know they have had a minimum rate for many, many years for the whole of the country?—Yes, but I would urge that an attempt to compare the retail industry with manufacturing is hardly reasonable.

12,808. The same people may have followed the same procedure that they have been accustomed to on the productive side, because they were the same people largely?—I think I am correct. Is not there a different rate for London and Northampton, for instance?

12,809. No, not on the productive side.

12,810. *Sir Arthur Pease*: You must not ask questions. You are here to answer them.—I am sorry. I was just asking a question which might help to elucidate the point. I was under the impression that there was a different rate for London and Northampton, and Northampton County.

12,811. *Mr. Poulton*: No, not on the productive side. We are on the productive side.—That is manufacturing. But excuse me, you do not pay the same rate of wages in Northampton County as in Northampton Town.

12,812. Yes.—Your knowledge is much greater than mine.

12,813. I am only just trying to show that they followed the rate of the trade itself, which is a national rate.

12,814. *Sir Arthur Pease*: Then your point No. 4 I do not understand. You say: "That Trade Board rates should be made applicable to the straightforward, every day operations connected with this or any other trade and no attempt made to price the variety of small repairs"?—There are certain operations which everybody in this room will appreciate in connection with repairs which are perfectly straightforward. Soleing and healing is a perfectly straightforward operation, but there are many other jobs which come into the every day work for which it is very difficult to put down a price which is fair and reasonable. I say that the operations of the Act are cumbered by these numerous small jobs unnecessarily. If we could have a scale which was fixed on the, so to speak, every day requirements, it would be far more simple. For instance, it is perfectly necessary in the case of children's boots to toe-cap and lengthen them. That is an operation which is by no means easy if properly done, and to fix a fair price for that job without seeing the work in front of you is very difficult. I think, to be fair, you have either to put the price too high so that the man doing the more difficult job is not underpaid, or you have to put it too low, and he is underpaid.

12,815. Is that provided for in the rates now?—At present a very large number of rates provide for things which are outside what might be termed every day requirements.

12,816. How would you deal with them? You could not employ them on piecework at all?—I think you could do it in this way. You might have a piecework rate for your straightforward operations; we will say there are a dozen operations which could be very easily named. Outside that I think you will find that it would be fairer to the worker and fairer all round if the job was performed by day workers who were a little more skilful than the man who had to do the ordinary straightforward job.

12,817. *Mr. McCallum Scott*: Is there not a time-rate fixed?—There is both a time and day-rate in this industry.

12,818. *Sir Arthur Pease*: Then in your point No. 5 you say: "that the rate of wage in any trade should be based on the reasonable earnings of a workman." Is that not what is done?—I am inclined to think that the tendency in the repairing trade is to fix the rate of wage on the possible earnings of a man of medium calibre in a badly organised shop. That I contend is wrong. I think the basis of wage should be arrived at by the amount of work an average man can do in a well organised shop.

12,819. You are speaking of piece-rates?—I am speaking of piece-rates. I do not think you have a right to penalise the public as you would be doing if you based your rates on lack of organisation.

12,820. *Mr. Poulton*: Is that not a question for the Board itself, because you are really challenging the basis upon which they settle the rates, are you not?—I agree that is so to some extent.

12,821. *Mr. McCallum Scott*: That is just what I was going to ask?—I think it does enunciate a general principle rather than one applicable to this particular trade. As a general principle I suggest the Trade Board Act has tended to put a price on work which is not the right price, because it has been based on a false premise.

12,822. I understand the criticism, but I do not understand what it is directed to. Do you want to impose some limit on the Trade Boards?—I think the suggestion is that this Inquiry is into the working and operations of the Trade Board Act, and I am

15 February, 1922.]

Mr. HENDERSON NEAL.

[Continued.]

trying to show that in this particular instance the Trade Board Act has, in my opinion, mitigated against the best interests of the public.

12,823. What would you suggest to cure that? Would you suggest some regulation imposed upon the Trade Boards?—I did not know I was going to be asked to suggest remedies, or else perhaps I should have considered one.

12,824. It seems to me that your criticism, which I appreciate, is one that should be put forward in the Trade Board for the purpose of arriving at the rate of pay fixed?—Quite so.

12,825. When you bring forward the criticism here I presume you have in mind the imposing of some restriction on the Trade Board?—I think it very difficult to impose any restriction of that sort.

12,826. I think so, too.—But, in considering the operations of the Act, you want to consider whether its operations have tended in the wrong direction, and that is why I bring it forward.

12,827. *Dame Adelaide Anderson*: You want to direct the Trade Board to a particular point round which its determination should gather?—My point is rather this: that the Trade Board Act has tended to impose a higher price on the cost of an article, an artificial price, because of its operations, and that if you had a free market in this particular instance you would secure, I believe, a better result. I am speaking of results in view of the public.

12,828. That is, that the worker should get the minimum rate, or anything that the employer chooses to give above it, where the organisation of the work is good, where you have good light and good conditions in the working places. Is that your point?—Yes, I think that is the proper basis upon which you should secure a price.

12,829. Do not the Trade Boards take that point into consideration to some extent?—I hardly think so in this particular business.

12,830. *Mrs. Lyttelton*: You think that the minimum is placed too low, that is to say, that the worker gets a wage which you consider he does not really earn. You think that the Act is apt to tend that way?—Yes, that is so.

12,831. *Dame Adelaide Anderson*: You think that it is fixed where the worker is really handicapped by handicaps that he need not have?—I think so.

12,832. *Mr. Poulton*: But that is not the workman's fault?—Personally, I do not think we are concerned with whose fault it is.

12,833. Oh, yes, because you have come here to criticise and show to us a better method, I take it, because you say that the rate is based upon rather the badly organised factory?—That is my opinion. I quite agree.

12,834. Therefore, by your argument, to follow it up, you would penalise the workman because of the badly organised factory?—I agree that is so, to some extent. But what is the logical conclusion? If you fix a rate which is perfectly fair to the worker on a proper organisation, does not that tend to compel other people to organise their factories so that they may earn their living? Otherwise, if you are going to have a rate which gives you only a certain return if the place is properly organised, the employer with a disorganised factory must either go out of business or put his house in order.

12,835. *Sir Arthur Pease*: Then you say in your point No. 6: "That representatives on the Trade Board Committee should be permitted to ascertain the opinions of the trade generally, so that they may not merely express a personal and possibly a strongly biased opinion." What is to prevent them doing that now?—I am not on the Trade Board Committee, so I am only speaking from what knowledge I have. I believe at present the majority of the discussion which takes place there is strictly private and confidential, and that imposes restrictions on the representatives in that they are not able to discuss things of real interest with the trade and so secure a general opinion. I believe I am right.

12,836. *Mr. Poulton*: I do not think it hinders them consulting fully their colleagues if they think fit to do so?—I understand that that is a complaint that has been made very frequently in the trade, namely, that they feel they are restricted from taking the opinions which would be so helpful to them.

Sir Arthur Pease: You are the first witness who has mentioned this in any way at all.

12,837. *Mr. Poulton*: I was just going to say that I do not remember anyone else making such a statement in the whole course of the inquiry?—This is not a criticism at all.

12,838. *Sir Arthur Pease*: There may be in a close negotiation offers and counter offers, and both sides may say: "This is without prejudice, and we do not settle this afternoon." You do not mean that. You mean something much more general?—I am speaking rather generally.

12,839. That is what might happen, of course, in close negotiation. There might be a general discussion as to what was to be done in the Trade Board, and what you mean to say is that those representing your colleagues would not be permitted to go back and take advice from members of the trade?—I think, generally, that is so.

12,840. We must make a note of that. This is the first we have heard of it.—You will find that very many of the documents are marked "Private and Confidential" which, I think, without injuring anybody, might be discussed openly.

12,841. We will make a note of that. Then your next point is "Adult learners." Have you anything special to say about that?—Only on this point. Frequently a man of 20 or 21 years of age desires to enter the trade. At the present time it is practically impossible for him to do so. There ought to be some machinery which enables him to start, very much the same as an apprentice starts in his youth. The difficulty has been cropping up a good deal lately.

12,842. *Mr. MacCallum Scott*: The Board has power to do that, has it not?—I looked fairly closely into it and I could not find that that is the power.

12,843. *Sir Arthur Pease*: The Board have full powers to provide for that.—If that is so, I am sorry that I misread it.

12,844. Your next point is: "Apprentices' wages to rise and fall on a *pro rata* principle"?—At present you have a fixed rate for an apprentice year by year, and I suggest that if there is going to be a consistent fall in the cost of living the rates which are paid under the Trade Boards Acts, and which have been fixed on the maximum cost of living, ought to fall *pro rata*.

12,845. Apprentice rates are fixed for five years?—In some cases, yes, and they were fixed at a time when prices were at their maximum.

12,846. *Mr. Poulton*: You only mean that they are fixed for five years of the youth's age, but not for a five-year period of time?—Oh, no. That I agree.

12,847. That is again, I submit, a matter for the Board?—Supposing a boy was apprenticed last year, his rate has to go on for five years, and the Board would have no power to vary that condition unless legislation was imposed.

12,848. *Sir Arthur Pease*: I see, your point is that though the minimum rates, and so on, can be varied by the Board at the end of six months, if a boy or girl were apprenticed those actual rates stand for five years and cannot be varied up or down?—That is as I read it.

12,849. *Mr. MacCallum Scott*: Would you be in favour of the Board under other circumstances increasing the wages of apprentices?—I said "up or down." I should intend it to apply either to a rise or fall. It seems logical to take it both ways.

12,850. *Sir Arthur Pease*: The next point is "Wages paid should be in a correct ratio to service rendered"?—I think I have fairly well covered that.

12,851. The next point is that it is not, in the main, a skilled trade?—There was a suggestion made in a good many quarters that the boot repairing trade is paid the highest rate under any Trade

15 February, 1922.]

MR. HENDERSON NEAL.

[Continued.]

Board, and it is so paid because it is essentially a skilled trade. I think that it can be very quickly disproved that it is essentially a skilled trade. There are a certain percentage of employees in it who are very highly skilled, and they in the main receive far more than the minimum. But I would almost say that the boot and shoe repairing industry is the cockpit into which is cast every man who fails to succeed in anything else, and to view the wage which is taken as the minimum from the angle that it is a highly skilled trade I think is wrong. That point will come out very clearly in connection with the suggestion of the hardship imposed on the organised employers who come under the Trade Board Act when they suffer the competition of men who do not employ any other labour. If this was a highly skilled trade you would not have all sorts of men turning to it in their spare hours to earn odd money.

12,852. Your point No. 11 is the position of the employer subject to Trade Board orders when in competition with single-handed repairers. We have had a very great deal of evidence on that.—I only want to make that point in connection with the skilled trade. That is one of the things which I think disproves the contention that repairing in the main is a highly skilled trade. All those straightforward jobs I am speaking of can be very quickly learned and performed in a satisfactory way.

12,853. We have had a great deal of evidence on that matter.—I only want to say that that matter is endorsed very strongly. It is the most difficult thing they have to contend with.

12,854. Your point No. 12 is: "The statement that the text of recommendation *re* Trade Board reform was concurred in by both sides of the Board concerned is inaccurate, as the first intimation that the majority of the Board received was the publication in the Press." What do you mean by that?—Published in the Trade Press there was this paragraph: "Following the statement which Mr. Crabb was authorised to present to Lord Cave's Committee by the Boot and Shoe Repairing Trade Board, as one of the employers' representatives on that Board, the following recommendations, in which both sides of the Board concurred, were presented." Neither side of the Board was consulted at all. I do not say there was no individual consulted, but in view of this statement in the Press I thought it right to draw your attention to it.

12,855. Do you mean it had never been before the Board?—It had never been before the Board, so I am informed by one of the members of the Board personally.

12,856. *Mr. MacCallum Scott*: Had it been before him?—No. He knew nothing until he saw it in the Press. I have the cutting here if you would like to see it. I am not suggesting that they would not concur in it; I think they would in the main.

12,857. *Mr. Poulton*: I am not on the Board, as you know, but do you think it arose from the fact that the Administrative Committee authorised the two representatives to come here and speak for their respective sides, because there is no doubt they were sent here by them?—I quite agree there, but this is quite another point. If you were to read it you would appreciate it.

12,858. *Sir Arthur Pease*: The Board applied officially to this Committee to give evidence through their Secretary?—I understood that, but this is rather a different statement, I think. It is not a question of evidence. This is supposed to be a considered statement agreed to by both sides, which is not according to fact.

12,859. Some of us have experience of these things in other ways. After a question has been considered generally, you usually leave it to two or three on each side to gather together the opinions and put them forward?—I am informed they had no power at all to make that statement.

12,860. We will make a note of that. The last point you put forward is about a Delegates' Conference?—Yes. The suggestion is that there has been no demand, and apparently it is suggested that there is no desire throughout the shoe repairing industry for a revision of wages. I only make this last point in order to point out that delegates representing 8,000 employers passed, with one exception, a unanimous resolution calling very strongly for a reduction; and that resolution in the main, slightly different in wording, was confirmed also at a meeting in London this week representing the London repairers.

12,861. One dissentient in 8,000?—One dissentient in both cases. I only point that out because it is suggested there is no demand.

12,862. That finishes this paper you have put forward. Have you anything to add?—I have nothing to add, unless you wish to ask me further questions.

(The Witness withdrew.)

(Adjourned till the following day at 2.45 p.m.)

TWENTY-SIXTH DAY.

Thursday, February 16th, 1922.

PRESENT:

SIR ARTHUR F. PEASE, BART. (*In the Chair*).

DAME ADELAIDE M. ANDERSON, D.B.E.
THE HON. MRS. ALFRED LYTTELTON, D.B.E.
MR. F. L. POULTON, O.B.E., J.P.

Mr. A. MacCALLUM SCOTT, M.P.
MR. H. D. HANCOCK (*Secretary*).

MR. W. E. COUNSELL and Miss POWER, recalled and further examined.

12,863. *Sir Arthur Pease*: I think, Miss Power, we went as far as Section B of your statement yesterday afternoon?—(*Miss Power*): Yes.

12,864. There was just one question I would like to ask: In the case of a large inspection, does the inspector deal with it single-handed, or does he have assistance where there are thousands of cases?—They may have assistance lately if they happen to have taken an officer in training with them; but normally a Trade Board officer works quite alone, and would have to deal with things single-handed. If he were travelling in the provinces he would be the only Trade Board officer in the district, and it would be impossible for him to get anybody to assist him. He might do so. There might be a case where a senior officer had taken one of the junior officers in training who would be with that officer to assist him.

12,865. *Dame Adelaide Anderson*: He could act as a witness to a verbal statement?—Yes. Of course, if it is a case of obstruction, or if an employer is likely to give false information, then we sometimes send another officer as a witness of exactly what takes place.

12,866. If it was serious obstruction, would the officer go away and come back with a witness?—Yes.

12,867. *Sir Arthur Pease*: But do employers or firms give you assistance in copying out things and so on, or is it left to the inspectors to do?—It is, for the most part, left to the inspector, because if proceedings were to arise, and the employer destroyed his wages books, the copy that the officer took would have to be put in as a true copy, and he would have to swear that it was, in fact, a true copy. If it was copied out by the employer for him he would be unable to swear it was a true copy. It might not be a copy of the wages book if it was supplied by the firm. The inspector would be able to swear that it was a true copy if he had made it himself.

12,868. But is it not almost necessary, where you have an inspection of a big works, that the officer should have some clerical assistance in order not to take up so much of the time of a thoroughly trained inspector?—It would be extremely useful if he had, but so far it is not possible; we have far too small a staff. They never work in couples except where an officer is in training with another officer or except if a special arrangement is made.

12,869. I was thinking rather of the case of an accountant engaged in auditing books. The chief man always has an ordinary clerk with him to call over and do such work as that. That is really an economy, because you do the work with a much lower-paid man?—It would be a very great economy if in the larger firms inspectors were able to take clerks with them for copying wages. Of course, those clerks would have to have Trade Board authorities to give them permission to enter the firm's premises and to see the wages books.

12,870. I meant that the inspector would go with them?—Yes.

12,871. *Dame Adelaide Anderson*: But all those entries are made under the powers given by the Act, are they not?—Yes.

12,872. So that it would be necessary to give a clerk similar powers, would it not, and a warrant of appointment?—I presume so, otherwise he would have no legal right on the premises.

12,873. But it would mean a very great economy if you could have someone of a less expensive grade to do that purely mechanical work for the highly trained inspector?—Yes, I think it would.

12,874. *Sir Arthur Pease*: Then, turning to section B of your memorandum, this is historical. Are there any points to which you would like specially to draw attention?—I wonder if I may enlarge slightly on the first page. In July, 1915, we had 12 inspectors. That was really our high-water mark. When we had those 12 inspectors we covered six boards, and those six boards covered about 12,000 firms, and about half-a-million workers approximately. We have at present 36 inspectors—that is to say, we have got three times as many as we had in 1915—but we cover approximately three million workers, that is to say, six times as many workers as we did, and approximately about 179,000 firms, which is 14 times as many firms as we covered in 1915. Then there are certain boards that are set up that have proposed rates but have not yet fixed them—the Grocery Board, the Made-up Textile Board, and the Milk Distributive Board for Scotland. Should those rates become fixed, that would increase the number of firms covered by the Act by 164,000, and that would mean that the number of establishments for which we were responsible would be about 27 times the number it was in 1915, although the numbers of our inspectorate would only be trebled.

12,875. And the work is more complicated because so many more rates have been fixed?—Yes. In 1915, if we made an inspection it might be necessary actually to investigate the wages of 25 per cent. of the individuals employed by a firm. Now we should have to investigate about 90 per cent. of the wages, because of the occupational rate.

12,876. Is there much difficulty in judging in which occupation a man or a woman is? There may be a certain amount of difficulty.

12,877. In deciding in which grade they are?—Yes. 12,878. Is there much difficulty about it?—There are difficulties when it depends upon the skill of the worker and things of that sort. For instance, in the coffin furniture trade dressers are entitled to a certain rate if they are expert in all processes. You have to arrive at whether the person is an expert in all processes before you can decide whether he is entitled to that particular rate.

12,879. How would you do that?—By questioning the foreman and the worker and the employer.

12,880. Their views are very different at times, are they not?—Sometimes they might be. Then you

16 February, 1922.]

Mr. W. E. COUNSELL and Miss POWER.

[Continued.]

have to arrive at a conclusion as far as you are able to do so.

12,881. *Mr. Poulton*: Suppose an employer refused to accept your finding, what would happen?—As I said yesterday, where there is a dispute as to the rate to which a worker is entitled, there is no final decision except in the courts.

12,882. Can you suggest any other way, because it seems to me that it is a very unsatisfactory way when an employer on the one hand, and yourself on the other, are at opposite views regarding someone's competency, that at present there is no machinery other than going to the courts, which in itself may be just as unsatisfactory in arriving at a decision, because there you may have to depend upon—and as a matter of fact you would have to depend largely upon the legal acumen of the gentleman presenting the case?—*(Mr. Counsell)*: Very often the employer is a member of the Federation, and he appeals to his Federation where there is a dispute of that kind. The Federation is in touch with the Trade Board so that the employer is very often able to put his case very strongly before the Ministry, and that is long before any legal action of the kind suggested is contemplated. The thing does actually get threshed out before it is considered with a view to proceedings.

12,883. *Sir Arthur Pease*: You mean it does not go back to the Trade Board?—No. If the employer and the Inspector are in disagreement as to the occupation of a certain worker, the employer, more often than not, appeals to his Federation for backing. He wants to be backed by them. The Federation, if it is not too sure about its ground, may appeal to the Trade Board. Even if it is sure about its ground, it may appeal to the Trade Board in order to throw light on the position from the Ministry's point of view, and have the position remedied.

12,884. *Mr. Poulton*: In what position is the workman in the meantime?—The position of the workman is, presumably, the same. He may appeal to his union, and the union may appeal to the workers' representatives on the Trade Board. The thing then is aired on the Trade Board.

12,885. Have you any suggestion which would make it more satisfactory? I should have thought they should have gone back to the Board and let the Board decide?—No.

12,886. But that is the machinery. Do you suggest anything more satisfactory and simpler, having regard to the experience you have accumulated?—I think there are very few cases where such disputes arise. It is actually a question of fact, and where there is a dispute of that kind, the officer would invariably seek information from other sources before he sends in a report. He may go back to the firm and say: "Look here, I think I have made a mistake, and it is more likely than not that you are right; but I will put your case and the workers' case to the Ministry, and I will put the case as it appears to me." The Ministry then may decide to refer the whole question to the Trade Board.

12,887. *Sir Arthur Pease*: It is really the difficulty of judging the capacity or the qualification of an individual worker, and that is very difficult to judge in some cases, I suppose?—It is.

12,888. *(To Miss Power)*: Would you go on with your point?—*(Miss Power)*: I think I was explaining that the number of firms liable to inspection has increased out of all proportion to the size of the inspectorate. We have at the moment 36 officers, but they are not entirely engaged on inspection, because that number includes Mr. Counsell and myself. Mr. Counsell has two of those officers engaged on special enquiries, and I have 32 engaged on Trade Board inspection. Of those 32, three senior officers are engaged for 75 per cent. of their time on indoor critical work on the reports of the junior inspectorate.

12,889. *Dame Adelaide Anderson*: Did you say you have 36 inspectors, or 32?—I have got 32, and three of those spend the majority of their time indoors,

12,890. *Sir Arthur Pease*: There is one point which has been raised by several witnesses, namely, that inspectors do not keep sufficiently in touch with the Trade Boards. That does not seem to be borne out at all from the records you have handed in of meetings with the Trade Boards, and I should be glad if you would explain exactly what the relationship between the inspectors and the Trade Boards is?—I think the feeling is that the Trade Boards are not sufficiently in touch with the inspectorate. That grew up after the removal of the inspectorate from the Office of Trade Boards to the headquarters of the Ministry of Labour. But I think it is more an arithmetical question than a geographical one. The Boards feel that they are not so much in touch with the inspectorate because they make application to get work done, which is not done. It is not for any reason that we are out of touch with them that it is not done, but we simply have not the staff to do the work. We send in an annual report to every Board, stating how much inspection has been done for that Board in the course of the year. We invariably receive a letter back from the Board complaining of the inadequacy of the inspection, and calling for a routine inspection in their trade. As a matter of fact, we cannot do it. We are already considerably in arrears in investigating complaints alone. The complaints with which we deal are kept so carefully sorted that every complaint is substantiated on investigation.

12,891. But do inspectors meet the Trade Boards and discuss matters with them verbally, or is it all done on paper?—It is usually done on paper. The senior inspectors do meet the Boards in connection with special investigations, but the junior inspectorate do not meet the Boards.

12,892. *Mrs. Lyttelton*: What do you mean by saying that all the cases are substantiated? Have you got some system of sifting them before they come up?—Yes. We have a questionnaire which we send out to every complainant—not, of course, to the anonymous ones—in which they are asked to set out certain particulars which enable us to judge whether the worker is claiming the right rate or not.

12,893. At first did you have to do a good many on chance?—Yes. The present system was adopted in order to prevent any time being wasted in the investigations of complaints which were not serious.

12,894. *Dame Adelaide Anderson*: It is the same with all organisation of inspection; you must get the particulars before you spend time in beginning to inspect?—Yes, quite.

12,895. *Mrs. Lyttelton*: The only reason I asked was because Miss Power implied a change?—We did not previously have the questionnaire, when things were not complicated. It may have been a question of one rate then; now it is a question of a number of occupational rates.

12,896. If there is a complaint now, it would go through a trade union official, would it not?—The trade unions now are, as far as possible, only sending specific complaints.

12,897. With particulars?—Yes. Occasionally they are not able to do that. Occasionally they send us a complaint in respect of a given area saying that they have reason to believe that there is general non-compliance in such and such a town, or such and such an area.

12,898. *Mr. Poulton*: In the case of the older Boards, do you find that now they have had experience since 1910, there is less necessity for inspection than in the case of the newer Boards?—Yes, there is certainly less, except that you are liable to get an old Trade, during a period of trade depression, rather slipping back in compliance in the low end of the trade. That has certainly happened in the cardboard box trade.

12,899. But still, there is less necessity for inspection, generally speaking, in their case?—Yes.

12,900. *Sir Arthur Pease*: In addition to these reports, would the inspectors ever help a Board with regard to questions of scope and so on, by giving advice?—Yes. If there is any difficult question of

16 February, 1922.]

Mr. W. E. COUNSELL and Miss POWER.

[Continued.]

scope, the inspector is sometimes asked to make an investigation and to report very fully as to what the work is that is carried out by a certain firm.

12,901. I mean before there is a dispute. Would the inspector never assist the Board in regard to questions of scope and definition?—Before the Board comes into operation, do you mean?

12,902. No—before the Board send out their proposals?—(Mr. Counsell): Yes, they frequently do that. It is one class of work that is undertaken usually by my small section—a special enquiry carried out on behalf of the Board. It may want information relative to the working conditions obtaining in a certain trade or a certain rate which is already fixed and which it is suggested should be varied.

12,903. Mr. Poulton: And they are always available as far as it is possible?—They are always available. I do not think there is any case where they have been turned down.

12,904. Sir Arthur Pease: I have asked you rather in detail on this, because so many people have said you are out of touch with the Trade Boards?—(Miss Power): Yes.

12,905. Would you go on, Miss Power?—In the old days when there was only one Chairman—Mr. Ernest Aves—the inspectorate used to undertake a good deal of the enforcement work as well as inspection. They also undertook work which is not now done by the inspectors, because organisation is better, and it has ceased to be necessary—such work as holding meetings at factories to explain the meaning of Trade Boards and to get workers' representatives, or to interview workers selected by trade unions as to their suitability as workers' representatives on the Board. Of course, the worker's side of the Trade is so much better organised now that that sort of work is not necessary, and the inspectors are not called upon to do it any longer.

12,906. Is that so, even in the case of a new Board?—The inspectorate do not now do it. We have not got any statistics as to the number of complaints that were received during that period, but for the most part an officer would not spend more than, it is believed, from about 40 to 50 per cent. of his time on complaints. The rest of the time of the officers would be spent on routine inspection. They would take with them the complaints they had for a certain district, and would fill up their time in the district on routine inspection.

12,907. Dame Adelaide Anderson: That was under the old system?—Yes. That is quite impossible now. The number of complaints is so heavy, and the size of the inspectorate in proportion is so small that we are entirely occupied on complaints.

12,908. Sir Arthur Pease: If you are reporting by routine, you would really know a great deal more how the work was going on than by examining individual complaints?—If you were able to concentrate on one district you would find out more about the conditions in that particular district. Of course, if one employer in the district made a definite complaint about a specific firm, the Inspector would make every endeavour to investigate that firm while he was in the district. But if an employer said, "I know my competitors in general are not conforming," the Inspector would be unable to make an investigation.

12,909. My point is that an Inspector employed on a routine inspection for a day would find out a good deal more than he would by examining one particular complaint; would not that be so?—A routine investigation in a day? An Inspector is not likely to cover more than two firms at the most in a day.

12,910. In the case of a complaint he can only cover one or two individual cases?—Individual firms.

12,911. You mean if there was a complaint, he would go through the whole of the books of the firm and not examine the particular man who had complained?—He would not examine the particular man, because it would certainly give away the complainant if you enquired into the wages of only one man in a firm.

12,912. Dame Adelaide Anderson: By taking certain sample cases in a factory, could you not sufficiently test the observance of the Act without examining every record?—You could do that in the old days, but you cannot do it now, because of the occupational rate. None of the small retail firms keep their books so exquisitely that they would have down against the worker's name his age, experience, occupation, etc. You would have to question the individual worker; he would simply be down in the book as: John Smith, 48 hours, £2 10s.

12,913. Would it be too much to ask them to keep those records?—I think it would be a good deal to ask. Also, I do not know that they would be able to keep them adequately even then.

12,914. Sir Arthur Pease: Will you now take your next point?—I think the next point is the transfer of the inspectorate to the head quarters of the Ministry of Labour, and the experience of employing inspectors of another department on Trade Board work.

12,915. Which has been very unsatisfactory, I gather?—The employment of entirely untrained officers was very unsatisfactory. The employment of partially trained officers was satisfactory in the case of about 50 per cent. of those officers. We have obtained some very valuable officers from the Employment Department. But those who were entirely untrained were, in my personal opinion, actively dangerous: the work is too complicated.

12,916. Were those who were valuable, valuable almost immediately they were taken over?—Those that were trained took some time. Their value has begun to be felt in the last six or eight months.

12,917. Dame Adelaide Anderson: After how long?—After about a year.

12,918. Does it take a year to train a reasonably good candidate?—It takes about a year to make an inspector useful; it takes infinitely longer to make a thoroughly trained officer.

12,919. Mrs. Lyttelton: And that is starting with an officer already trained in another direction—not a perfectly raw article?—That is so. But it would take far longer than a year to train an officer who was capable, for instance, of assisting an employer to increase his output.

Sir Arthur Pease: I think we will take the point about increasing efficiency afterwards.

12,920. Mr. Poulton: What kind of person do you mean, when you say it takes them so long to be trained? I suppose, if you had someone in a big factory who was fully acquainted with Trade Boards and their working, it would not take a person of that description, who knew all about it, very long to become efficient?—The Trade Board inspectors are called upon to know the technical details of every trade—not only of one trade.

12,921. But there is a great deal of similarity once you have mastered the general position?—Yes, but there is a great deal of dissimilarity as well.

12,922. This question has been raised at the Boards, and I want to get at what is at the back of it.—Do you mean the suggestion that you should employ people in the trade?

12,923. Yes.—(Mr. Counsell): Is it not the question of specialisation which you have in mind rather than, for instance, taking all trades—people with trade knowledge?

12,924. That is what has been raised at the Boards, and now that you are here, I am taking advantage of your experience to hear what you think about it.—(Miss Power): I take it you mean certain officers allocated to certain Boards. I think there is much to be said for that. I am not sure whether it would not be extravagant from the point of view of administration. You would not be able to decentralise those officers unless you increased your inspectorate. You would have to keep officers at headquarters to travel to any place to investigate a trade.

12,925. Dame Adelaide Anderson: But if you group them in certain main centres of those industries under the Trade Boards, you could perhaps secure that each inspector would get experience in not only one Trade Board trade but perhaps in a group of

16 February, 1922.]

Mr. W. E. COUNSELL and Miss POWER.

[Continued.]

two or three trades.—That is what we are ultimately aiming at—that you should not only decentralise, but that you should specialise in certain cognate trades such as the metal trades, the distributive trades and the textile trades.

12,926. Then you might move them round in order to acquire fresh experience?—Yes. You would get a group of experts in their respective trades in each division.

12,927. It is important not to have a large staff of inspectors travelling in the country, is it not?—Yes. It is not intended to continue that: it is merely a question of training at present. We have not the staff to take charge of decentralised groups. We hope to decentralise ultimately. I think that a measure of specialisation in groups of trades will ultimately be essential because I think it is more than can be expected that anyone should acquire the technical details of every trade which already comes under a Trade Board.

12,928. What they all must learn is the right handling of a case and the personal way of dealing with all kinds of people.—Yes. But certain trades are very technical; for instance, the lace trade. To send an inexperienced officer into the lace district would be quite futile; the officer could not even understand the terms of the trade.

12,929. *Sir Arthur Pease*: And even in the same trade, in different parts of the country, I suppose the names they call certain operations by are quite different?—Yes; and they have different methods of manufacture. At one time the shirt and collar trade, for instance, had different methods of manufacture, in different areas.

12,930. How is that got over when they fix a rate, if the terms are not the same? Does that come up?—(*Mr. Counsell*): We do not fix general minimum piece rates for cases of that kind where you have different terms and different conditions of work. Where you have general piece rates you must define the terms, and you have more or less to set out the conditions under which the work has to be performed. You have got to measure the work and more or less determine the conditions of the work before you can fix a price for that work, and where you get so many varying conditions in different parts of the country, it is impossible to fix general piece rates unless you do it on an area basis.

12,931. It would be absolutely necessary to have district rates?—It would be for general minimum piece rates; but where you have the ordinary piece-work basis time rate, then it is not necessary: the one rate will apply to all factories irrespective of the method of manufacture.

12,932. (*To Miss Power*): Is there any other point on the historical part of your statement that you would like to mention?—(*Miss Power*): I think, as I was mentioning about the failure of certain members of the Employment Department engaged on this work, that I should, in justice to those officers, say that they were only able to have a very short training at a time when the work was rapidly increasing in complication, owing to the inadequacy for training purposes of the existing Trade Boards staff. There were only six fully trained Trade Board officers of the old staff left to acquire all the technicalities of a new trade, to undertake all the investigations, and to train all the new officers.

12,933. I suppose the difficulty of inspection in the different trades varies very much?—Yes.

12,934. One trade is comparatively simple and another is not?—Yes. For instance, in the sugar, confectionery and food preserving trade, inspection may be comparatively straightforward normally. Of course there are still questions of testing piece-rates, such as those for onion peelers and jam packers, but the complications in that trade are not comparable with some others. The amount of comparative evidence that you would require to have stored in your mind is very much less.

12,935. I think now you have got as far as “permit investigations”?—I think I said a good deal about that yesterday. At the moment we are only able to investigate a very few permit applications.

12,936. And they are really dealt with by the Boards in another way, are they not?—Yes—by the Administrative Committees of the respective Boards.

12,937. Do you do nothing now at all in regard to them?—We do a certain number. If we are able to investigate them within a few months, we do those of them that they think necessary.

12,938. Then you deal with the pooling of Government inspectors and so on. I think you feel it is practically impossible to do much in that way?—I am personally of that opinion. I think that the work is too complicated.

12,939. And you set forth the various conditions there are?—Yes. I think it has been suggested that the police are capable of making investigations. I should like to suggest that I do not think even the cleverest Metropolitan policeman could undertake piecework investigations.

12,940. *Mr. Poulton*: It was said, I think, that the present inspectorate under the municipal councils might carry on the work?—I think it was Mr. Kay who spoke of the question of policemen coming in in connection with weights and measures.

12,941. The weights and measures are under the police department of the ordinary municipal council?—Of course there are certain aspects of our inspection which could be done by other inspectors: for instance, the posting of notices.

12,942. *Sir Arthur Pease*: But there are certain simple questions that people want answered. Could you not have some recognised authority to deal with a locality without having to send a man or a woman down in such a case?—Do you mean that you could have someone in the locality to whom people could go for information on Trade Board matters?

12,943. Yes—if some particular point was asked to which a clear answer was wanted by the employer or employee?—If we had decentralised inspectorates, which we are aiming at, we should have the local office at which information could be obtained. Previously we had one local office only, and that was in Nottingham. That was largely used, and employers and employed in the lace trade could obtain information when difficulty arose.

12,944. I mean if there was a specific question to which anyone wanted an answer, and as to which they could not get a definite answer, would not one of these other bodies, like the local authority or someone, be able to give them an answer?—It would depend on the nature of the question.

12,945. I mean a simple question?—If they were asked whether a worker should be paid a dressmaking or a tailoring rate, or as to whether they were engaged on tailored or non-tailored garments, presumably the question would not be answered, because the person would not be able to answer it: it would be too technical.

12,946. *Dame Adelaide Anderson*: Then there would arise the question of entry?—Yes. If it was merely a question of the posting of a notice they would be able to answer it. I think that was one of the difficulties which came up in using the untrained inspectorate. They were overwhelmed with such questions as scope, for instance, which they were unable to answer.

12,947. *Sir Arthur Pease*: Then you refer in your statement to the necessity for the continuation of inspection?—I think one of the points for continuance of a high grade of inspector is their educational use. Whenever it is known that there is a Trade Board inspector in the district, the knowledge flies round with extraordinary rapidity, and the inspector is invariably visited by the members of the employers' federation or the trade union secretary, who either want to lay complaints or to ask for information on a large number of points.

12,948. In what sense do you mean educational?—That they are able to explain on the spot.

16 February, 1922.]

Mr. W. E. COUNSELL and Miss POWER.

[Continued.]

12,949. Do you mean to make people quicker to keep within the Act, or to enable them to run their factories better?—I mean if they ask what rate is applicable or what brings a worker under a certain category.

12,950. Then the question of notices seems a very difficult one?—There has been difficulty in the past in notifying employers in widely scattered trades, such as the clothing trades, of the rate applicable. For instance, in the dressmaking and millinery trades, a very large number of the employers inspected had never received notices, and were in *bona-fide* ignorance of the existence of a Trade Board. That was in the case of small employers.

12,951. Would it cost much to have notices printed in pamphlet form which they could buy at a small price?—I doubt if they would buy them. It is a question of notifying them of the very existence of a Trade Board very often.

12,952. It has been pointed out to us the difficulty there is in reading a notice stuck up on a wall, and whether it would not be possible to have notices put up in pamphlet form so that they could be purchased for 1d. or 2d.?—They do exist in pamphlet form.

12,953. All of them?—Yes. I do not think it would ever be possible to notify everybody unless you had some form of compulsory notification, because in so many trades these little employers are in and out of trade, and they are moving about from place to place. It would be impossible for us, for instance, to have a complete list of all the dressmakers. In the case of these little country dressmakers, it is very difficult to follow them from one place to another. Sometimes they are employers and sometimes they are employees; sometimes they are working alone and would not come under the heading of employers at all. It is according to the state of trade.

12,954. *Mr. Poulton*: Have you had many complaints under section D about the fear of dismissal preventing employees giving you information?—We have had cases of that lately.

12,955. You have no power to deal with them, have you?—No.

12,956. Do you suggest you should have any power, because there was a very bad case in this morning's papers?—You mean in connection with a perambulator firm, do you not?

12,957. Yes. The magistrate spoke very strongly, but he has no power. I can quite see the danger if people can be dismissed in a wholesale manner for claiming just their bare rights?—Of course that was an exceptional case.

12,958. I hope it is an exceptional case. It would be a very sad commentary on the position if it was not. There were 87 summonses taken out for one firm?—Of course it is very often the case that the worker is unaware of the rate to which he is entitled. There is a great deal of ignorance among workers.

12,959. *Dame Adelaide Anderson*: How can you bring the knowledge to those workers?—I think you cannot do it in any way except by ensuring that every employer has a notice of the wages affixed—not only that he gets the notice, but that it is affixed. Of course he is under a legal obligation to affix the notice. The difficulty is to make sure he gets the notice and is himself aware of the existence of a Trade Board. That applies more in the retail than in the wholesale trades. The wholesale firms of course are generally aware of the existence of a Trade Board.

12,960. *Sir Arthur Pease*: I should be very sorry to try to read some of those notices which are stuck up on the wall of a building. Where they are complicated, with a lot of piece rates, it would be almost an impossibility, would it not?—I admit some are very complicated; but where you have piece rates fixed, I think it is very difficult to simplify. If there are 1,200 separate processes in the brush and broom course are generally aware of the existence of a Trade Board.

12,961. *Mrs. Lyttelton*: And after all, the worker will only look for his special occupation?—Yes.

12,962. *Dame Adelaide Anderson*: Did these workers to whom reference has been made lose their

work?—In this particular firm they were dismissed, because they attended the Court in accordance with the summonses.

12,963. Do you know that sort of thing happened in connection with the Factory Acts?—Yes.

12,964. Did you ever hear of the fund which was set up to indemnify workers who were dismissed?—Yes.

Dame Adelaide Anderson: Do any of these workers under your care fall back upon the fund?

Mrs. Lyttelton: It is wound up.

12,965. *Dame Adelaide Anderson*: Is the fund itself wound up?—There is a new fund which applies not only to the Factory Acts but to the Trade Boards. I believe it is the same fund under a new organisation.

12,966. *Sir Arthur Pease*: Is that a voluntary fund?—Yes.

12,967. *Dame Adelaide Anderson*: The old fund was a voluntary fund?—I think so.

12,968. It also applied, did it not, to Trade Boards?—It applied to the Factory Acts. I do not know whether it applied to the Trade Boards.

Dame Adelaide Anderson: It did.

12,969. *Sir Arthur Pease*: In the case where these workers were actually dismissed, you say it was victimisation, and not where an employer says: "I cannot carry on my works because the wages are too high"?—This was victimisation. (*Mr. Counsell*): May I answer the question raised by *Mr. Poulton* as to what action should be taken in cases where workers are dismissed for attending Court to give evidence against an employer? I think the question of Contempt of Court might arise there, and that an employer who threatens his workers with dismissal for attending Court after being subpoenaed to attend the Court, might properly be committed by the Court for contempt.

12,970. You have no suggestion, have you, for simplifying Trade Board notices, or for putting up a summary of the notice?—(*Miss Power*): I think they have been made smaller lately, and I believe extracts from the Act have been omitted. I think possibly there might be a simplification of the matter, but that is often dangerous when you are dealing with legal notices.

12,971. *Mrs. Lyttelton*: Do you think if they were on sale at a cheap price at the Labour Exchanges, the workers would buy them?—I think the organised workers might, but I do not think the unorganised workers would. There is an extraordinary lethargy among unorganised workers as to their conditions of labour. It is possible to find a worker with a notice on the wall in front of her machine, who is not able to tell you to which rate she is entitled, even if it appears to be a perfectly simple rate.

12,972. *Sir Arthur Pease*: Then we come to the question of the position of slow or incompetent workers?—That is the difficulty of a permit only being given to a worker who is mentally or physically afflicted. It does not allow a worker to hold a permit because he is a slow worker. In a case where nearly all the workers are on time rates, a slow worker may be employed who cannot be put upon piece rates. He is not physically or mentally afflicted in any way, and therefore he is not a case for a permit under the Act as it at present stands; but at the same time he is a slow worker.

12,973. Do you think it is possible to differentiate?—Yes, I think it is possible, but I think it would be very liable to abuse, and you would want a very careful scrutiny of the claim that the worker was slow, because it is a question of fact which is very difficult to arrive at. Where piece rates are paid, you need not make the application; but at the same time you can find out the relative output of that worker as compared with other workers. Where the worker is on a time rate basis, you cannot find that out from the records, and you have to find it out by questioning fellow workers and the foreman, and the worker himself.

16 February, 1922.]

Mr. W. E. COUNSELL and Miss POWER.

[Continued.]

12,974. If you do not have some method of doing that, will not these people become unemployable?—I think there is a risk that they may happen in certain cases.

12,975. *Dame Adelaide Anderson*: Does this kind of case arise in the laundry trade?—No, because there are piece rates there now.

12,976. Are there always piece rates there?—No, but generally; and there is a guaranteed time rate in the laundry trade.

12,977. *Sir Arthur Pease*: In the distributive trades especially there are odd jobs which a man or a woman who could not really do a day's work, could do?—Yes. Of course we have not practical experience of the distributive trades yet.

12,978. Do you wish to say anything about the case of the sub-contractor?—Yes, that is a difficulty that we come across chiefly in the lace trade and in the tailoring trade. I think you have had evidence from a lace employer in connection with the difficulty in the lace trade. That trade is entirely run by means of middle workers and out-workers. Where an employer employs out-workers without the intervention of a middle worker, he has to pay such workers the fixed piece-rate plus 15 per cent. commission if they fetch and carry their own work. If he gives out sufficient work to one worker—not to do it herself but to redistribute it among other workers—that woman is not an employee but a sub-contractor and an employer as well, and he is not legally obliged to pay her any commission. The Act says it is the custom of the trade to pay the sub-contractor 25 per cent., but the custom of the trade is not legally enforceable. The result is the better houses will pay that woman 25 per cent., and the other houses will only pay her 15 per cent. commission as if she were taking out work for herself. For instance, we have found firms employing women as middle workers who only pay the middle worker 10 per cent.—even less than the single worker's rate.

12,979. *Sir Arthur Pease*: Ten per cent. on the general minimum piece-rates?—Yes, although that middle worker has the responsibility for paying the National Health Insurance for her workers and for booking out their work under the Factory Act—in fact, has the complete responsibility as an employer.

12,980. Have you any suggestion for getting over it?—I think the Lace Board is unanimous in making the suggestion that an Act should be passed making it possible in the lace trade to fix a legal commission for middle workers. I think there is no other way of doing it but to compel the employer to pay a fixed commission of 25 per cent., or whatever is decided, to the middle worker.

12,981. *Mrs. Lyttelton*: It should be compulsory?—Yes.

12,982. *Dame Adelaide Anderson*: That would tend to alter the organisation, would it not?—No, I do not think so.

12,983. Is it done for the convenience of the employer?—Yes, because if the work is going out to a middle worker it relieves the employer of responsibility under the Particulars Clauses and under the National Health Insurance Act.

12,984. *Mr. Poulton*: Would it not have the effect of helping him very considerably in his expenses? If he could give out all his work in that kind of way he would not have the same kind of factory?—In the lace trade he gives out the finishing, either in small quantities to women who are his direct employees, or to a middle worker.

Mr. Poulton: I was thinking of other trades where they would have to have a big factory, and the expense would be considerable. They would avoid that altogether.

12,985. *Mrs. Lyttelton*: But you mean to limit it to lace?—Yes. It is a very much simpler problem where you have general minimum piece-rates. Where you have such rates, if the employer pays a low commission, it is obvious that the middle worker has to make a profit, and so she pays less than the fixed piece-rates to the workers.

12,986. *Mr. MacCallum Scott*: Are these very small people, as a rule?—In a time of trade slackness they are workers; in a time of trade prosperity they are middle workers.

12,987. *Sir Arthur Pease*: Your scheme for dealing with this would be that she got 10 per cent., 20 per cent. or 25 per cent. commission. She would not have guaranteed any rate. If she had very little work to take out one day she would only get the percentage on that, and if she had a great deal of work another day she might earn a good amount?—A worker is obviously a middle worker where she takes out more work than she can do herself.

12,988. *Mr. Poulton*: How do you get hold of her if she breaks the law, if to-day she is a worker because she has a small amount of work, and the next day she is an employer?—In practice it does not work out like that. When the trade is busy a woman remains a middle worker for a long period. When the trade falls slack, she may become a worker; but it does not go up and down in that way.

12,989. *Mrs. Lyttelton*: With reference to Mr. Poulton's point, I suppose really the lace trade will always be a home workers' trade?—The lace finishing. Of course, it has a warehouse section.

12,990. But I mean that particular class will probably always be home-workers?—I think so, because the amount of warehouse space required would be very considerable.

12,991. And also it is done at odd times, is it not?—Yes.

12,992. That is why I do not think any amount of legislation would drive them into factories?—Quite.

12,993. *Sir Arthur Pease*: Why is a woman a middle-worker if she can earn more by working herself?—She generally does a certain amount of the work she takes out, even if she is a middle-worker, and she pays herself the general minimum piece-rate. At the same time she gets the commission, whatever it is, on the bulk of the work which she gives to the other workers. Lace work comes from the dresser, and it has to be ready by a certain time—a very brief time. The work is hustled out to the middle-worker. She could not possibly do it herself. She would have to distribute it and get it back in a certain fixed period—very often 12 to 24 hours.

12,994. *Mr. Poulton*: It makes it difficult to find out whether the rate is being paid?—It is difficult in any case.

12,995. They might say: "I never had a notice," and how are you to know? You cannot supply them with a notice?—The employers are supposed to keep a list of their outworkers.

12,996. Yes, but they do not employ the third person; they employ the second person?—(*Mr. Counsell*): We have got over that in the chain trade. In the chain trade we have distributed notices among home-workers themselves. We have furnished each of the home-workers with the rates for the work they are employed on.

12,997. *Sir Arthur Pease*: Is there anything you wish to add on that point?—(*Miss Power*): I do not think so.

12,988. I see you say that small employers complain that only the big firms are adequately represented on the Trade Board?—Yes. For instance, you get a complaint from a small sugar confectionery man that a rate is fixed upon the capacity of a big combine like Cadbury's to pay, and not upon the small man's capacity. You get that kind of complaint.

12,999. Then there are complaints from rural districts?—Yes. We have had a good deal of that, but I think the Retail Bespoke Tailoring Board is taking steps now to consider that difficulty.

13,000. Have you anything further to say about that?—I do not think so.

13,001. I think, Mr. Counsell, you have some points to which you wish to draw our attention. I take it those reports on inspections are all confidential; that they refer to particular firms, and would be confidential?—(*Mr. Counsell*): Yes; I think

16 February, 1922.]

Mr. W. E. COUNSELL and Miss POWER.

[Continued.]

that as far as the names of the firms are set out, if the reports are to be put in for publication, they should not be identified with any particular firm. I think the names might be deleted.

13,002. I hardly think it is necessary to print the whole of this?—I do not think it is.

13,003. But that will be for the Chairman to decide. But these show very clearly what the details of the work are which is carried out, do they not?—Yes.

13,004. *Dame Adelaide Anderson*: They are all actual reports, are they?—Yes.

13,005. *Sir Arthur Pease*: Your memorandum will be printed. Are there any special points you wish to draw our attention to?—I do not know that there are any to which I wish to draw special attention. The memorandum sets out, I think, fairly clearly the nature of the work undertaken by the small section of which I am in charge. With regard to the paragraph on types of special inquiries on page 1 of the memorandum, it might be well perhaps just to mention the nature of the work to which reference is made under Item 1—inquiries carried out with a view to the fixing of general minimum piece-rates either in the case of indoor or outdoor workers. At the moment there are inquiries being made for two Boards, one the Laundry Board and another the Tailoring Board. In both cases minimum piece-rates have been in operation for some considerable time, but the Boards complain that, owing to the difficulty of determining the ordinary worker, they feel it would be highly desirable from the point of view of administration and simplification to fix piece-rates giving the prices which must be paid for each article of work. Investigations have been made in the one trade, and are being made in the other, which I think will enable the Boards to fix those rates. When that is done it will materially reduce the amount of work of the inspectorate. The workers, by reference to the piece rates lists, will be able to determine themselves whether they are or not getting the piece rates to which they are entitled. The question of the ordinary workers would therefore fall to the ground in these trades.

13,006. But would it not be almost impossible to fix piece rates in the laundry trade?—I ought to have explained that in the laundry trade it is proposed to fix piece rates for ironing only. I do not know, but I think there will probably be something like 200 piece rates. They cover pretty well all the garments that go to the laundry.

13,007. I mean there is a very great difference in garments that are called by the same name. How would you deal with that?—I think there is a difference in size and a difference in the degree of fancy work that you find in them. You have first of all the plain, the medium and the fancy garment. You have the small, the medium and the large, and you split them up into some such order as that.

13,008. It seemed to me there would be a very great difficulty in fixing piece rates in the laundry trade?—No doubt there is a great difficulty in fixing them, but after they have been fixed, I think it would be extremely helpful, not only to the trade but to administration.

13,009. Do not their character and the way in which things are got up vary very much from one laundry and one district to another?—They do. You would have to make a differential rate presumably for the garments which are ironed by electric and gas-irons as compared with flat-irons.

13,010. *Dame Adelaide Anderson*: There would be no precise line which should be drawn anywhere; it would be a sort of rough specification?—I do not think it will be very rough; I think it will be fairly clear. It sounds very hazy and nebulous at the moment as I give it, but I think that the schedule will set out the position fairly clearly.

13,011. Take children's pinafores—large size, medium size, small size.—Yes.

13,012. *Sir Arthur Pease*: I am afraid I rather turned you from your point just now. Will you pro-

ceed, please?—In the retail bespoke tailoring trade the Board is trying to fix general minimum piece-rates for the making-up of men's garments. That is very much more complicated and very much more difficult, I think, than the fixing of piece-rates for the laundry trade. Here you have got to set out every operation of work connected with the manufacture of a garment from marking out to pressing off, including the number of buttons, the number of button-holes, the way the thing is pressed, the material and the work which is put inside the garment, and so on, according to whether the operations are done by hand or by machine. In that trade I think it is true to say that it has almost been impossible to enforce Trade Board rates—the piece-work basis rate, I mean—simply because the conditions of work have been so varied and the workers themselves are so independent that they will not subject themselves to workshop discipline. It has become necessary to fix general minimum piece-rates if enforcement is to be carried out. The Retail Bespoke Trade Board has now set up a committee which is drawing up a schedule of piece-rates for the trade.

13,013. And you think that job is one of extreme difficulty?—It is one of extreme difficulty. I think it is true to say that in the making of a coat there are probably as many as 100 different operations.

13,014. But when you have got to put those into the wages schedule—supposing the piece-rates are fixed—how would you do that?—You would have to fix them for coats, trousers and vests, made by hand, made by machine. You would set out every operation of work that can be put into a garment, and you would fix the value of each of those operations. If an employer decides to have his garments made with only half the operations of work, then he would only pay for that amount of work.

13,015. He would have a coat made unlined instead of lined, for instance?—Yes. He would not pay for the lining in that case. Then there would be the question whether it had two pockets or three or four pockets, and so on. The second clause—Item II.—relates to special minimum piece-rates. They are cases where an employer, for some reason or another, wishes to have special minimum piece-rates fixed for the workers in his own particular factory. He does not want to be bothered with the ordinary worker clause or with keeping records of hours, and so on; so what he does is to make an application to the Board that special minimum piece-rates be fixed for the work as carried on by him. I think three different Boards have fixed those rates.

13,016. Simply for the one factory?—Simply for the one factory.

13,017. But if that number were extended it would be quite impossible for the Board to deal with them all, would it not?—If they all came at once, yes.

13,018. If a great many came at once?—Yes. As a matter of fact, I do not think there is any likelihood of a large number of applications for special minimum piece rates coming in, especially in cases where employers are rapidly improving the conditions of employment—introducing new types of machinery and improving their organisation and so on. It would mean that every time they made such an improvement they would either have to lose the benefit from it or get the piece rate varied.

13,019. *Mr. Poulton*: Do they have to get the consent of the Board for this special method?—The Board fixes the rate.

13,020. *Sir Arthur Pease*: Then has that to go through all the procedure of proposal and that kind of thing?—No, not proposal. An application is made. I forget in which Appendix it is, but it is set out in one of the Appendices. The firm make application under Section 4 of the 1909 Act for special minimum piece rates to be fixed for certain kinds of work. The Board may have an investigation made, and on the report they fix piece rates for each of these operations of work, or for each garment. Those rates remain in force until they are varied.

16 February, 1922.]

Mr. W. E. COUNSELL and Miss POWER.

[Continued.]

13,021. It is not necessary to put them all through the lengthy procedure of giving notices, because it only affects that particular firm?—That is so. The firm get a certificate of this kind (handing in form of certificate).

13,022. *Mrs. Lyttelton*: Is there any tendency for other firms to adopt them?—I think not. They are very few and they are usually cases where the employer is particularly anxious to employ workers who come in casually and whose time need not be specially recorded.

13,023. *Dame Adelaide Anderson*: If there was no power of this kind, it might have the effect of retarding new methods of manufacture?—Yes.

13,024. A new method is being tried and the ordinary general minimum piece rate will not apply?—Yes, the ordinary piece-rate will apply. The other case only applies where an employer makes application for particular rates to be fixed for his particular factory.

13,025. It would apply in his factory because he is using a new method?—Yes.

13,026. And therefore he wants something which will yield the same result to the worker as the general minimum piece rate?—Yes.

13,027. *Sir Arthur Pease*: There seems to be a good deal of latitude in these rates. I see there is no difference between trousers lined and unlined?—That is so, because in lined trousers there is a certain amount of work which is not performed in unlined trousers, and the one more or less compensates for the other. Item III. refers to cases where a board has fixed general minimum piece rates and desires to vary them. The Board meets. The employers put forward a proposal to reduce the rates. The workers say: "What basis do you want to bring them down to?" The employers say: "Bring the rate down to one shilling per hour." The workers then say: "The rates are not now yielding 1s. 10d." (The employers say they are.) There is a disagreement as to the value of the rates which are already fixed. Then before the Board can proceed to vary its rates, it may be necessary to ask the Ministry to make an inquiry into the actual value of the piece-rates which the Board has fixed in order that it may know what the basis is, so as to vary them accordingly.

13,028. But would not that be done at the time the first rate was fixed?—Not necessarily. In some cases the Board, at the outset, agree what rates shall be paid for a certain operation of work without having perhaps clearly in mind the hourly value of the rate they are fixing.

13,029. *Mr. Poulton*: That is, they go largely at the start by rule of thumb?—Quite. They may say, as they have said in some of the trades, that one rate may yield 1s. an hour and another may yield 1s. 3d.; so we make it 1s. 2d. or something like that. When the employers are pressing for a reduction the workers may say the rates do not produce anything like the employers say they do; or if there is a proposal to increase the rates, the employers may say they yield more than the workers say they do.

13,030. *Sir Arthur Pease*: As a matter of fact, it would appear that the less people did the higher the rate might be, and that therefore the piece rate should be put down?—That is a matter for investigation. If one found the workers deliberately slackening in order to place a higher value on the work, I think it would be deplorable. But as a matter of fact what one finds is that if slackening does take place, it is over a very limited period, and if the inspector goes sufficiently far back in his investigations he is more or less able to eliminate it.

13,031. You do not want to discourage people from doing their best?—That is so.

13,032. Then we come to No. IV?—The cases referred to in No. IV are those where complaint is made to the Ministry that the rates fixed for certain classes of workers bear harshly on them and tend to drive them out of the trade. I mean rates may be

fixed for work which is simple in character—fairly high rates for adult workers. Later complaint may be made that juveniles or young persons on much lower rates are being brought into the trade because the rates fixed for adults are so high and the work is so simple. Later enquiry may show that, and the facts when placed before the Board, enable it to determine what action should be taken in regard to the matter.

13,033. Do you want to say anything about the nature of information sought in special inquiry cases?—I think that has been pretty well covered by Miss Power.

13,034. I think you can give us some information as to the effect of the Trade Boards in improving the organisation in factories, cannot you?—Yes. I think that the first point bears on the obligation on an employer to keep wages and time records. These can be a very big help to him in determining the value of his workers' output. By analysing his wages records he is able to see how much more or how much less a worker earns in different weeks. If he finds, for example, that a worker's earnings have dropped materially, he makes inquiry and finds perhaps that it is due to bad organisation or is due to slowness on the part of the worker.

13,035. You mean it results in speeding up?—It results very often in improving the organisation.

13,036. *Dame Adelaide Anderson*: Does it also result in labour-saving methods—increasing production without increased fatigue?—Yes, I think it does. It generally tends to a better balancing of groups of workers. Not only that, but you have a better arrangement for distribution of work, and so on. You also get from the keeping of these time records elimination of waste time.

13,037. And do the employers studying motion study at all for fatigue prevention?—A number do, but I do not think a very large proportion are doing so.

13,038. Does the work of the Industrial Fatigue Research Board throw any light on these problems?—Yes. In so far as the hours of work are concerned I have not seen its effect very much from the point of view of motion study, but I have in so far as its research shows that fewer hours may result in production equal to that of a large number of hours.

13,039. I was thinking rather of the method of manipulation and so on to reduce waste time?—It has certainly reduced waste time, but I do not know that it is very closely followed.

13,040. It has not gone very far?—It has not gone very far.

13,041. *Sir Arthur Pease*: But in many cases you say where the piece-rate being paid was too low, it has been made adequate on inquiry?—Yes, it has. That, I think, is a fairly common experience of the more experienced Inspectors. Frequently an Inspector will make an investigation and find that the piece-rates themselves appear to be perhaps grossly inadequate. The employer may complain that it is not the fault of the rate, but the fault of the worker. He may say he is paying rates which are as high or higher than those paid by his competitors for exactly the same kind of work, and if you are going to call upon him to increase his rates you are going to put him out of business. In a case of that kind the Inspector usually looks into the conditions of work. He may find that there is considerable waiting time, or he may find that the machinery is not as efficiently run as it might be.

13,042. I see you give an instance in your memorandum of an overloaded engine?—Yes, there are cases of that kind where bad factory equipment has materially lowered the value of rates, which otherwise would have been satisfactory.

13,043. Do you find that a rate which is adequate in one district for the workers to earn a reasonable wage is too low in another district to enable them to earn a reasonable wage on account of the skill they have?—No, I do not think you find that. You often find that you have different methods of manufacture and

16 February, 1922.]

Mr. W. E. COUNSELL and Miss POWER.

[Continued.]

different types of machinery, and that what may be a fair rate in one district is not a fair rate in the other.

13,044. And that is not due to the worker?—That is not due to the worker.

13,045. I have a case in mind where I was told that the rates paid in a mill before the war were lower than they were in the factory; but they said, as a matter of fact, the value of the work done was practically the same?—The output was greater in the factory where the lower rates were paid, I suppose?

13,046. No—where the higher rates were paid. And that therefore it paid to pay them?—That may possibly be due to the fact that they attract not the ordinary workers, but a group of the best workers in the trade, by paying them higher rates, and therefore getting a proportionately higher output from each worker than they otherwise might.

13,047. Have you any other point you would like to mention?—I think that the only other point is the question of training which you raised. I think that the provision of learners' facilities in the determinations has resulted in the juveniles in many of the trades receiving much more efficient training than they otherwise might have done. The fact that in the clothing trade an employer has got to raise his rates in the case of juvenile workers is an incentive to him to make that worker worth her money each time he has got to raise her rate, so that he is continually pushing her along—giving her better or more highly skilled work.

13,048. *Mrs. Lyttelton*: Of course, you only refer to the rate which applies to the time the girl has been at work, and not to her age?—The clothing trade rates are governed by both age and experience.

13,049. I should have thought it would have been better if they were paid according to the length of time they had already been learning?—Yes.

13,050. *Sir Arthur Pease*: In other words, what you got for nothing you value at little?—Quite. It was common in 1912, 1913 and 1914, in some of those trades in which the rates had not been long

in operation, to find juveniles who had been perhaps for two or three years at one little job. They were taught nothing of the trade. Enquiry would show that a girl had been paid perhaps the one rate for two or three years—probably a few shillings a week.

13,051. *Mr. Poulton*: I suppose they become very expert by being kept at that one job?—They did not attempt to train them at all. They just kept them on at some blind alley job in the factory for an improper length of time.

13,052. *Sir Arthur Pease*: That must, of course, depend to some extent on how the people above them move, must it not?—It must; but at the same time the groupings in the factories and workshops were not as well balanced as they might have been. Firms may have had an undue proportion of juveniles in the factory, and they were more or less uncommitted to the training of a large proportion of the people that they took in. But under the present regulations an employer has got to give each of those youngsters proper facilities for learning the trade, and he takes care, as he has got to increase her rate each six months, to push her on. When a Trade Board has been in operation for a number of years there is generally, I think, a wider field of skilled labour for the trade than existed before.

13,053. In going to these factories, have you much difficulty in dealing with employers as a rule? Is it the rule or the exception where you have difficulties?—I think, generally speaking, one finds employers very reasonable. Where difficulties arise, they do so very frequently because employers have not got detailed knowledge of the conditions obtaining in their own factory. They are dependent on managers and foremen for their information, and they are often very much surprised at the information we pass on to them.

13,054. Is there any other point you would like to draw attention to?—I think not.

Sir Arthur Pease: We are much obliged to you and to Miss Power for all the interesting information you have given us.

(The Witnesses withdrew.)

(Adjourned till Wednesday next at 11 a.m.)

TWENTY-SEVENTH DAY.

Wednesday, February 22nd, 1922.

PRESENT :

THE RIGHT HON. THE VISCOUNT CAVE,
G.C.M.G. (Chairman).

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTELTON, D.B.E.

MR. JAMES BELL, M.P.

MR. W. T. LAYTON, C.H., C.B.E.

SIR ARTHUR F. PEASE, Bart.

MR. E. L. POULTON, O.B.E., J.P.

MR. A. PUGH.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (Secretary).

Mr. HUMBERT WOLFE, C.B.E.,

The Witness handed in the following Memorandum:—

CONFIRMATION OF RATES FIXED BY TRADE BOARDS.

1. There are three methods of confirming the rates which are fixed by Trade Boards. The first would be to permit the Trade Boards themselves to confirm their own rates; the second is that contained in the Acts under which confirmation and reference back rest with a Minister responsible to Parliament, and the third would be to substitute for Parliamentary

recalled and further examined.

and Ministerial responsibility an independent judicial tribunal. The first proposal has not in fact been put forward by any witness in evidence before the Committee and it would seem, therefore, that it is not contended that the Boards themselves should have the final decision. There remain, therefore, for consideration the two rival theories of control by Parliament and control by a judicial body. Before briefly touching on the arguments adduced in favour of the rival theories, it is desirable to suggest for the consideration of the Committee that the two theories are

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

mutually exclusive. Either Parliament and the Minister must have the final voice or that voice must be vested in some body independent of both. It is suggested that any attempt to combine the two methods, so far from providing a solution, will produce the faults in respect of which both are liable to criticism.

2. The ground advanced for criticising the first method of confirmation by a Minister responsible to Parliament is generally that questions affecting wages should not be settled by a Minister susceptible to political pressure. It is suggested that the questions for determination are of a purely industrial character and should be decided solely on their industrial merits. It is agreed that the introduction of ministerial responsibility seriously disturbs the position because other factors are brought into play. In favour of a judicial body possessing the requisite authority, it is held that the findings of such a body would be generally acceptable and would not be open to the charge to which ministerial decisions are, or may be, subject. On the other hand, the following points are worthy of consideration with regard to the suggestion that an authority not responsible to Parliament should be substituted for a Minister.

In the first place it is a broad constitutional question whether powers of the kind given by the Trade Boards Acts could or should be exercised except under Parliamentary control. Nor is this point met by suggesting technical or nominal responsibility of a Minister. It is clear that a Minister can only be answerable to Parliament for matters over which he has genuine control.

In the second place, if the judicial tribunal is final, its findings cannot be challenged in Parliament as is possible under the other method. Moreover, it is vital to the preservation of the principle of arbitration, which would be necessarily involved in this scheme, that decisions once reached by the final court, should be final. But in the extraordinary difficulties which beset industrial decisions it is certain that at some time or other a tribunal, however constituted, will in fact give cause for complaint. In that event, either the grievance must go unremedied or the principle of judicial finality must be severely impaired.

In the third place, it must be remembered that the real body which fixes these rates is, and should be, the body in the trade which has the full knowledge of the facts. That power of fixing the rates by the Board should only, it is suggested, be limited by general public considerations. These considerations cannot be purely judicial in character but must constantly have a political bearing in the true sense of the word. That being so, if an independent tribunal is entrusted with the functions of confirmation and rejection, it may have two effects:—

- (a) The Boards themselves must cease to be bodies, as they are at present, for settling the rates and become bodies for presenting the employers' and workers' sides respectively to a final tribunal; and
- (b) The tribunal itself in determining the rates may have to take into account matters which are questions of public policy and which will have to be determined without reference to Parliament, which alone is generally responsible for public policy.

3. It will be for the Committee to recommend which of these principles should govern confirmation or rejection. It is here suggested that both cannot. In support of this contention it might be worth while to examine very briefly a proposal which has been made to the Committee that the Minister should retain the right to confirm where he agrees with the Board, but that in all other cases he should refer the point at issue to an appellate tribunal whose decision he would in fact be bound to accept. It would appear that such a course would be open to all the objections which have been stated as applying to an appeal to a completely independent tribunal. The Minister would in fact be required to accept the findings, and criticism would, therefore, be not of his action but

of the tribunal. Moreover, it is likely that the existence of the right of appeal would tend to provoke and thus substantially reduce the autonomy of the Boards. But in addition the political difficulties felt by those who advocate this scheme would not be cured but intensified. On the one hand the Minister would in fact have no real responsibility: on the other he would still be open to challenge as long as he possessed nominal responsibility. He would, therefore, either always have to support the findings of the tribunal, with which he might not always agree, or, alternatively, he might have to express disagreement which would seriously impair the authority of the tribunal. Moreover, the fact that the Minister still had responsibility could not but tend to further delays, since it is inevitable that parties dissatisfied with the decisions of the appeal tribunal would appeal further to the Minister.

4. It is suggested for consideration that the abnormal conditions under which the Boards are at present working has caused undue prominence to be given to this particular aspect of the case. In normal times the number of questions arising upon rates fixed by the Boards is far less and tends to present less difficulty. In ordinary circumstances a Minister responsible to Parliament should be able to deal effectively and rapidly with the rates as they are submitted to him. It is not disputed, however, that circumstances, even in normal times, may arise in which the questions submitted to the Minister may require detailed investigation. In that event there seems no reason why the Minister should not have an enquiry made by such a tribunal or by such persons as he may think fit. The essential point, however, is that the Minister should have complete discretion to decide whether he would order an investigation, what form the investigation should take, and what decision he would reach upon the investigation thus made.

13,055. *Chairman:* You have come to give us some final observations before we conclude the evidence before the Committee, and you refer, in the memorandum you have submitted, to the methods of confirmation of rates fixed by Trade Boards.—Yes. I have circulated a note on that to the Committee.

13,056. Yes, we have that. You divide the methods of confirming the rates into three categories. The first would be to permit the Trade Boards to fix their own rates without outside confirmation?—Yes.

13,057. That, I think, has never been suggested?—That is so.

13,058. The second method would be that which is in the Act, namely, confirmation by a Minister responsible to Parliament?—Yes.

13,059. The third would be to substitute for the Minister an independent tribunal?—Yes. As you say, the first method has not been advocated, as I understand it, to your Committee. Therefore, I do not think it is necessary for me to deal with it. The second is the existing method, and I would rather deal with that last. The third is the new proposal. The point I wanted to make, through the Committee, with as much force as I could is that I do not think any compromise between the second and third methods is possible. I think it leads to confusion, and would in the working lead to grave administrative difficulties. But I would like to put this point first: I think that a good deal of the importance which has been attached to this proposal has been due to the very exceptional circumstances in which Boards have been placed. There has been criticism of the action taken by the various Boards, and criticism of the action taken by the Minister; but I think that that has been due, to a great extent, to the very abnormal way in which wages have been moving up and down. I suggest that in normal times the amount of work to be done in confirming and reference back is far less and of less importance—though still extremely important—than it has been lately. I say that, because I wanted to put it to the Committee that the body which must remain really responsible for the rates is the Trade Board itself, and that any alteration which tended to

22 February, 1922.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

weaken the authority of the Trade Board itself, would be, in my view, a step in the wrong direction. It is, I know, suggested, or has been, that the Trade Board were not always quite conscious of the grounds upon which they fixed their rates, and it is possible that their explanations of the grounds on which they fixed their rates, have not always been as articulate as they might have been. But when you look at those graphs which have been handed in to you by my Department, you will see, when you look through their rates, that they get very near to the line which has been suggested as the line below which rates should not go, by a very competent authority, namely, Mr. Rowntree. I suggest that if they have actually in practice fixed a reasonable rate throughout in that way, that must prove that however little they may have explained the grounds on which they proceeded, the grounds have in fact been based on good sense and knowledge. I suggest, therefore, it is undesirable to do anything which would make the authority of the Boards less, and I do feel very strongly that the creation of an independent tribunal would inevitably have that result if the independent tribunal was to be final. The first reason which I give for that is that the tendency would inevitably be to treat the final tribunal as the real wage-fixing authority—as a real re-hearing authority; that is, if there was complete power to appeal to it. Instead of the Trade Board being the body for fixing the rates as it is now, it would be a body upon which both sides—employers and employees—would tend to prepare their case for presentation to a later tribunal, and that would necessarily, in my view, lead to delay, and possibly to friction. Further, from the point of view of the tribunal, I can see considerable difficulties. A decision upon industrial matters is not like a decision upon ordinary judicial matters. There is always an element of doubt, and always an element of opinion. It is inevitable, however you constitute your tribunal, as I say in my note, that some day it will give a decision which is wrong, or which is considered to be wrong. Then either, if it is a final tribunal, there is no remedy for the mistake; or, if you do alter it, you impair the principle of judicial finality or challenge the principle of compulsory arbitration. For those two reasons, among others, I do not think that a judicial tribunal is satisfactory.

The third reason, which I think is perhaps equally important, is that it must not be supposed in deciding in matters of this kind that the considerations are purely or only industrial. There are considerations which have a political bearing. In using the word "political" I do not mean politics at all; I mean the general interests of the consumer and the general interests of the State at the moment. It is not to that sort of question that you can properly ask a judicial tribunal to direct its attention. I suggest that that at least is as important a factor in the decision as the other two.

13,060. I am not putting forward this as my own view—I wish to ascertain yours—but it has been suggested that it is desirable to have some body which will be in a position to co-ordinate the decisions of Trade Boards and bring them into line, and that with either a Court or a central body of some kind, you would be able to do that?—On that I suggest there is a good deal of danger in indiscriminate co-ordination. The essence of the Trade Boards Acts is that each trade should fix the rate which that trade can bear; of course they must have regard to what is happening elsewhere, but an attempt to impose uniform rates upon all Trade Boards may have dangers of its own. I think it is quite important that there should be some authority which is able to look generally at the rates coming up, and decide whether in fact they are going too high or too low, or are outside the mark. But that, I suggest, can be, and is, quite properly done by a Minister. I suggest if you make it the business of a judicial authority to attempt to impose rates, you may run a risk of improper uniformity, and you certainly will get the position that each trade thinks—and I think thinks rightly—that it alone is capable of legislating for itself. It would be very indisposed to accept the *ipse dixit* of an outside body, however distinguished. It would be extremely difficult to compose any final

tribunal which would really carry weight, or would have the confidence of the Boards.

13,061. Mr. Layton: May I ask how you would reconcile that with the point you made just now? I did not take down your actual words, but I think what you said was that the charts showed that wages had tended to come very close to the line indicated by Mr. Rowntree, and that that indicated that the Boards had made, I think you said, sensible decisions?—Yes.

13,062. Or you used some such phrase as that?—Yes, perfectly.

13,063. Now you are saying that you want to leave room for differentiation?—I do not think it is quite inconsistent, because some of the Boards actually reached what Mr. Rowntree calls the poverty line—I do not accept his language—while others are slightly above it. My argument was that if you compared all the rates with that line, you would see that in general they are not extravagant or unthought out rates. They are not identical.

13,064. Do you mean that practically none of them are below that line?—I do not mean that. I do not think many of them are actually below it. I mean that they bore a sensible relation to that line, and were not experimental. I do not suggest they are identical, because they are not.

13,065. Chairman: Then what do you say as to the position of the Minister?—There was only one other point I wanted to mention before going to that, and that was the composition of this tribunal. If you compose it of the Trade Boards themselves and make a super Trade Board, I suggest that that is not a feasible thing to contemplate; it could not be done. It would either be of so gigantic a character that it would not be a Court, but would be a public meeting, or it would have to draw members from panels, and I do not think that you could expect one Trade Board to be prepared to accept the views of any other Trade Board, or any other Trade Board members, as to what was the right rate. If it was the Industrial Court, which has been suggested, there is no better tribunal in existence in our view. It has done its work admirably, and I believe it has the general confidence of the country. But there again, of course, it is perfectly true that the Industrial Court has not got the same expert knowledge as the Trade Board itself in any individual trade. Therefore, it would simply be a case of re-hearing, and in my view you do not want to create that atmosphere.

So far as the Minister is concerned, his position is not that of a re-hearing authority, nor is it strictly that of a co-ordinating authority, as we consider it. His view is that primarily it is the business of the Boards themselves to settle their rates. In normal times when things are not disturbed, what the Boards do require is very little interference by the Minister. But he is always there with general knowledge of wages conditions in the country; with general knowledge of the position as regards unemployment; with general knowledge of the position of the country's trade, and it is possible for him when he thinks that a Board, for one reason or another, is not having regard to the general conditions in a proper way, to call their attention to it. But, as you understand, he does not initiate new rates; he simply refers them back.

The only point upon which it may be suggested, in my view, that the Minister requires further assistance, is in certain cases by the provision of an enquiry, possibly of a public character, where the issue is really a very doubtful one. It has been suggested by one of the witnesses that the Minister should have the power to confirm where he agrees with a Board, but he should always refer to an independent tribunal where he does not agree. That seems to me to have the worst faults of both systems. The Minister still has the responsibility to Parliament, but it is a purely nominal responsibility. He has got to accept apparently what the final tribunal says. If he does not agree with it, he still has got to defend it in Parliament, and if he insists on

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

overriding it, as he may, he reduces the authority of the tribunal. But it is quite a different proposition, and one which I suggest to the Committee is possibly worth considering, where the Minister is in genuine doubt as to whether a particular rate has been properly fixed, and where he is in doubt as to whether there are circumstances requiring further enquiry, that he should have power to appoint either an individual or any body like the Industrial Court to help him in the special circumstances of the case. I should not think that would be a power he would need to exercise often, but in very difficult cases it would make certain that you could have further public light let in on a difficult point.

13,066. It might be either the Industrial Court or some person appointed by himself?—Yes.

13,067. Just as the Inspectors of different Government Departments hold enquiries?—Precisely; for instance, like the Local Government Board Inspectors.

13,068. *Sir Arthur Pease*: I am not quite clear what you mean. That would be entirely voluntary on his part, I take it?—Entirely.

13,069. He would not be compelled to refer to this body if he was not going to sanction a rate?—He would not.

13,070. He could refuse the rate, or agree to it, and only if he wished would he refer it to this Court or whatever you like to call it?—That is so. My point is that as long as either party can insist on an appeal, they are very likely wherever they disagree, to demand it, and that in the long run you would get nothing but appeals. But if only the Minister can use this outside body, you have the possibility of further light and you keep the power still where it ought to be, in my view, that is in the Board.

13,071. How would it be if you limited it by saying that the Minister could sanction rates, but before refusing to sanction a rate he must have an enquiry?

—That would really in my view involve the same difficulty, because if it were clear to either side on the Board that you would have to enquire before refusing, they would press very hard for the enquiry. But the more important point is, if I may ask a question: Would you suggest in that case that he would have to accept the result of the enquiry, or would it be open to him to accept or refuse it? I know I ought not to ask the question, but it is vital to my answer, because if the Minister cannot refuse, then I suggest he is in an impossible position, because he is responsible to Parliament for a decision which he has not himself made.

13,072. If he had the right technically to refuse, it would be very difficult for him to do so?—That is the point. In the long run I suggest the result of that power would be to increase enormously the number of enquiries, and to reduce considerably the independence of the Board.

13,073. *Chairman*: What you mean is, if he thinks the rate is right, he will confirm it?—Yes.

13,074. But if he is clear it is wrong, he should refer it back?—Quite.

13,075. If he feels doubt or requires confirmation, he should order an enquiry?—Precisely.

13,076. *Mr. Poulton*: Suppose he could deal with it right over the head of a Trade Board, would not that amount practically to ignoring the Board, and so create additional friction?—I do not think so. I do not inevitably suggest an individual; it might be the Industrial Court. It would, however, be some independent authority, just as in the case of the setting up or dissolution of a Trade Board you can appoint an individual to hold an enquiry.

13,077. But they have a right to put their case?—The parties, of course, will put their case to the individual. I presume that the two sides of the Board would, in the ordinary way, appear before him and put their case. It is only a question of the tribunal. It is a question whether you use the Industrial Court or another agency. I am not wedded to the individual.

13,078. *Dame Adelaide Anderson*: It is like the sort of appointment that is made when an appeal is made against a special order made by the Home Secretary?—Yes.

13,079. When an experienced lawyer or judge is generally appointed?—That is so; I have in mind a person of that kind. The sort of person we have on our panel of arbitrators for ordinary disputes might be chosen.

13,080. *Sir Arthur Pease*: The point has been urged here that when a Minister holds up or refuses a decision, no one knows on what grounds he is refusing that decision. The point, I think, has been pressed by both sides that there ought to be some open, public way of knowing the grounds on which the Minister decides that he cannot accept the decision of a Trade Board. I take it the reason for this reference or enquiry, or whatever you like to call it, is that those reasons should be publicly stated to the parties objecting?—In every case the Minister gives his reasons for referring back. He never refers back without stating in precise terms why he refers back. I think the real trouble is that it is felt sometimes that the objectors, for example, have not had their case fully heard on the Trade Board, and that there has not been an adequate hearing. But I suggest that the right remedy is to see that the Trade Board do give the full hearing. If you start the practice of hearing outside, I think that will mean that the Trade Boards will lose their authority. But there is no mistake about what the Minister does; he clearly tells the Board why he has referred back in every case.

13,081. *Mr. Poulton*: Do you mean by that that he suggests a reason, or does he simply ask the Board to reconsider it, saying that in his view a certain point has not been adequately discussed?—It varies according to the case. In some cases he draws attention to some particular fault in the rate. He may say that the time rates are too high, or do not bear a proper proportion to the other rates; or he may say he has received very strong objections, which seem to him to require further consideration. But he always gives the main points upon which he reaches his decision.

13,082. In the case you have just mentioned, where he has received a number of strong objections, it may be that the Board itself have never had those objections before them. Should they not have an opportunity of having the objections before them, so that they can analyse them?—Certainly. In most cases, as a matter of fact, what happens is that a large number of objections are received by the Board in a disputed case. Then it comes to the Minister, and some of those objections are repeated. They are not very often quite new in character, but perhaps they are urged more strongly. The Minister then indicates to the Board that he has received objections and tells them, if they desire to know, where the objections have come from, and it is open to the Board then, if they so desire, to hear the people who have put their objections to the Minister.

13,083. *Mr. Bell*: Have there not been complaints that the Minister has not referred back but has simply held up a decision?—I admit there have been complaints lately, but there have been very special circumstances, one of which is due to this Committee. If you will remember, you asked the Minister, as a Committee, not to proceed with first rates until they had been referred to you.

13,084. *Mr. Poulton*: In what case was that?—We had that in the case of the Grocery rates.

13,085. I do not think so. We must be quite clear as to this, because there is a good deal of misunderstanding about it. I do not remember anything of that kind. What we did was to say that we did not express an opinion upon the matter?—*Mr. Bell* asked me if some had been held up. I said that one or two had been held up, and in the case of the grocery rates we definitely informed the Grocery Boards—the Scottish and English Boards—in referring the rates back, that this Committee was sitting; that it was conceivable—although of course

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

we could not possibly express any view—that what they recommended might have some bearing on the future of those Boards, and in the circumstances we invited them to reconsider their rates when this Committee had reported.

13,086. That is an entirely different matter?—I think I ought to say, Mr. Chairman, that it is the fact that we did have a request from you to defer proceeding with the grocery rates.

13,087. *Chairman*: For a short time, until we had seen the Minister. Having seen the Minister, we passed a resolution that we did not desire to make any representation at all?—That is right.

13,088. The Committee over which you presided, Mr. Wolfe, recommended an Advisory Committee. Would that have any functions connected with the confirmation of rates?—I do not think it was contemplated by my Committee that it would have. It was to take general questions of policy as they arose, and to advise the Minister.

13,089. *Sir Arthur Pease*: Was it to deal with questions of scope?—No, certainly not. It was really, I think, largely to have reported to it the sort of way the work was progressing generally, and to give advice if there were difficulties, but not on specific points affecting individual Boards.

13,090. *Mr. Layton*: Do you think that some further body should be set up which might advise the Minister on questions of scope?—I was going to deal with scope, if I might.

13,091. *Mr. Poulton*: You referred a few moments ago to the fixing of a rate which a trade could bear?—Yes.

13,092. Do you mean by that, that if in a very badly organised trade the employers could bring their books to prove that they could not pay a certain rate, the employees should be prepared to accept an excessively low rate; or do you mean that there should be, at any rate, a rate fixed, and that the obligation should be put upon the employers of making better arrangements? You know that in the early stages one of the things that was said was: You will drive this industry out of existence?—There are two considerations which I think the Acts contemplate in regard to fixing rates. One, of course, is the protection of the workpeople, which means giving them a wage of a reasonable character. The second is—and this, I think, is the reason why it is done by trades and not by a minimum wage—to see what the trades can pay. In practice, I think, it tends to operate a little in the opposite direction to your suggestion to me. It is not that some trades are below what is a possible margin, but in some cases the rates are a little higher than that, because the trades are better organised and a little better able to pay a slightly higher rate. I do not think you will find in practice that any Trade Board has fixed a rate which is open to the general criticism of being unduly low.

13,093. I am only thinking of the earlier days when it was said we were driving the trades out of existence. We were then told they were parasitic trades?—Yes.

13,094. You know the matter was actually raised in the House and that there was a full dress debate upon it as to whether we were justified in keeping a parasitic trade going with people at starvation level. But that trade might so improve its machinery as to put it in a better position financially?—Of course it is a very big economic question whether you should attempt to settle a wages position by losing a trade. I would rather not, if I need not, go into the economic argument underlying it. I simply point to the fact that even in a trade like the toy trade, which has had very great difficulties to meet, the rate is not one which can be distinguished as an unfair rate to pay; so that in practice I think the Boards have seen to it that if a trade is very poor, at any rate the rate fixed is not unreasonably low.

13,095. Would you agree that although a rate may be fixed which some employers may think is an impossible rate, nevertheless, by experience and

advice from your inspectorate the employers have been able so to improve their machinery that they could adequately meet the rate?—There have been cases where employers were unduly apprehensive, I think, before the rate came into operation, and have found later that they could bear it better than they expected. After all, the whole basis of objections generally has been that it would be impossible to carry on business if the rate was imposed, and it is very often found in practice that it is not so.

13,096. *Mr. Layton*: Arising out of that, have the evidence which has been given here and your own enquiries, modified in any way the view you put before us originally as to the effect of present rates upon employment?—No, I think substantially not, because I have read the evidence very carefully to discover definite proof of increased unemployment due directly to the Trade Board rates, and I am bound to say—though perhaps I have not given sufficient weight to certain things—that as far as I can see it has not been proved by the evidence, and perhaps for the reason that I gave before, namely, that there are so many causes contributing to unemployment that it is extremely difficult to isolate the immediate one. But I think I ought to say that, as I told you, there has been unemployment in some of the sewing trades caused directly, in our view, because some of the rates had been fixed too high. Those rates have been reduced since, and I do not believe that any unemployment in those trades is any longer due to the rates. I imagine that if we enquired very closely into what was happening in Cornwall at the present moment, and if we imposed on every establishment in Cornwall the national rates, we might cause considerable unemployment. I do not believe that Cornwall at the present moment is generally able to bear some of the rates put on it.

13,097. *Chairman*: Do you mean that they are not paying the wages fixed by the Trade Boards?—I will not go so far as to say that. We do not know that they are not.

13,098. *Mr. Poulton*: At any rate, would not that be due to the special economic conditions in which they find themselves at the present time?—Certainly, and I would say in any case that in Cornwall we are, in a flagrant case, which is not a case of people who cannot pay, but, in our view, of people who will not pay, taking proceedings at the moment. But Cornwall is very special indeed.

13,099. *Mr. Layton*: Is it really remarkably abnormal? Is the volume of unemployment generally in Cornwall much greater than it is in other districts?—The actual volume may not be higher, but the general standard of living is lower. The main point which distinguishes Cornwall from other places, in our view, is that whereas unemployment in the rest of the country ought to be much less with the improvement in trade, there are those who fear that the main Cornish industries will never revive.

13,100. Does not your argument amount to this, that under the general economic conditions which are obtaining, you might have a bad state of trade; but if you have rates which are too high that might be a temporary cause of unemployment?—I have never concealed from the Committee that a Trade Board might fix a rate which would largely increase unemployment; but I said in my evidence that they do not in fact fix such rates. Since I gave my evidence, the majority of the Boards have been steadily reducing wages, and there is nothing to indicate to me that there is more unemployment in Trade Board trades than in other trades.

13,101. That would not be quite the criterion, would it?—I accept that. Unemployment might have been less, you mean, in Trade Board trades if there had not been the Trade Board rates.

13,102. Certainly, inasmuch as the Trade Board trades are likely to be those in which there is a low rate of unemployment.—Not necessarily.

13,103. Put it the other way—that the trades in which there is expected to be a very high figure of unemployment are not Trade Board trades?—That may be so. But, on the other hand, as I believe I

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

said last time, I think there are half-a-dozen reasons contributing to unemployment, and when I gave evidence last, I had not, and have not since, found it established that the Trade Board rates themselves directly cause, or can be alleged to cause, unemployment, except, as may happen, in a case where an inefficient employer is unable to organise his business adequately. That is inevitable when you start a new system.

13,104. I did not want to raise a general discussion; I wanted to know what impression the evidence had made on the Department?—On the evidence I do not think the case has been established. I have not seen any special instances where it has been driven home.

13,105. *Sir Arthur Pease*: I understand that there are no general figures as to the rates ruling for ordinary labour except those obtained by an enquiry which was conducted by the Board of Trade a good many years ago?—We have not got our wages up to this year, but the standard wages book was issued for 1920.

13,106. I mean outside of the Trade Boards?—The general wages book was issued, I think, for 1920. We have no record of earnings—no complete figures—for more than 10 years before the war.

13,107. You referred to Mr. Rowntree's poverty line. I suppose you are aware that in all the organised trades of the country they never have paid wages equal to that poverty line for ordinary labour?—That is so, but I was looking at the poverty line in that chart and comparing a certain number of Trade Board trades with a certain number of outside trades, and I thought on balance, except for the exceptional cases of coal and steel at the moment—for instance, engineering was well above the line, and so on—there was not a very great discrepancy between the two.

13,108. I was not referring to the present moment; but taking the years before the war when things were normal, the organised trades in this country had never paid a wage equal to what Mr. Rowntree puts as the poverty line for ordinary labour. Do you think it is possible for them to pay that in the future? Where is the money to come from?—I would rather not argue on that. I think you are perfectly entitled to make the point on what I said before. All that I maintained was that there was a figure which had been accepted as not a very extravagant one, and that the Trade Board rates had in fact, by accident of course, come very near it. I am not prepared to say that wages can stay at a given point, nor am I prepared to say they can go below it. I say it is a Trade Board's business to see what its trade can bear, bearing in mind what labour requires to live on.

13,109. The difficulty is that a great many of the rates covered by the Trade Boards in distributive trades are fixed at this poverty line, or above, and they can keep them there. They will make those trades permanently pay rates above the organised trade rates in competitive industries?—I do not know why they should continue to keep rates at a figure which does not compare with rates paid generally in the country. That would be a matter for the trade themselves to settle, looking at the movement of wages.

13,110. There is, of course, the case you know of which has been quoted. An agricultural labourer cannot get more than 30s. or 40s. and the man who goes round with the milk is getting 57s.?—It may well be that some adjustment of the wage may be desirable. It is of course a fact that the agricultural wage has come down rather rapidly, and it is conceivable that some of those other border-line wages as between agriculture and the milk distributive trade may be reconsidered by the Board. But I should have thought it was unlikely, if the work is really comparable, and if the traditions are really comparable—and both those things are important—that that considerable discrepancy would remain. Before I should accept that as a fatal indictment of

a Trade Board rate, I should want to know how the agricultural rate compared with the roundsman's rate before there was a Trade Board, and I should not be surprised if there was a considerable discrepancy before.

13,111. *Mr. Layton*: You said just now that coal and steel were exceptional, and that on the whole the engineering rates did not look so bad; but have you considered the point that whereas in those trades—particularly in the coal trade where there has been a heavy reduction of rates—the unemployment figure has fallen very much, the figure in the engineering trade, where the reduction has been slow, is now almost the highest there is—certainly if you take the engineering and ship-building trades combined?—To answer that by another question, one would have expected that if the reduction in wages directly decreased unemployment, you would find in the Trade Board trades as wages were reduced, an immediate reduction in unemployment, which I do not think you find.

13,112. *Mr. Pugh*: Are we not rather taking up a line of argument which would lead to conclusions based upon an altogether abnormal condition of things? If that is so, can you take present conditions as any criterion for comparison between Trade Board trade arrangements, and the arrangements in other trades?—Only to the extent that if the Trade Boards had not reduced their wages at all and had remained completely static while all the other trades were coming down, it would be an indication that the Trade Boards had not been functioning properly.

13,113. Why should there be any distinction or any difference in procedure, or in the method of arranging their affairs, as between trades which are covered by Trade Boards—which are similar machinery to that possessed by outside trades—and other trades?—None that I can see. But the critics of Trade Boards have said that Trade Boards were so constituted that they prevented the natural movement of wages. My reply is that the facts do not seem to substantiate that.

13,114. Do you not find the same distinction in the rates in the case of trades operating outside Trade Boards and those inside?—In what way?

13,115. Differences in rates?—Yes, between one trade and another; of course we do.

13,116. *Chairman*: I am afraid we have led you rather far afield. We will now pass to the other general question of the powers of Trade Boards to fix rates?—I would like to make a preliminary point on that. It has been suggested fairly widely that the 1918 Act has gone much further than the 1909 Act, and that the Boards under the 1918 Act have gone much further than Boards did under the 1909 Act. I am not prepared to admit that at all. The only additional powers which the 1918 Act gave were a power to fix a guaranteed time-rate, a "fall back" rate, a power to fix a piece-work basis time-rate, and a power to fix an overtime rate. The powers against which criticism has been directed, have been the power to fix scales of wages for classes, and the power to fix elaborate scales of piece-rates. Both those powers existed under the 1909 Act.

13,117. That is quite true; but it has been suggested to us that Trade Boards can be set up under the 1918 Act, not because the wages paid in a trade are exceptionally low, but because the trade is unorganised, and that has led Trade Boards to modify their outlook under the Act?—I said last time, and I am prepared to adhere to it, that I do not think there is any trade which we brought in under the Act of 1918 which we could not have brought in under the 1909 Act.

13,118. A good many of the trades disputed that?—They are perfectly entitled to say that their wages at the time we brought them in were not wages of a type that were regarded under the 1909 Act as exceptionally low wages; but you have got to bear in mind the artificial inflation of wages which has been caused by war conditions. However, I do not press that point too hard. The point I do make is that

22 February, 1922.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

the condition as to organisation is not really intended to increase the powers—though it looks as though it were—it is really to restrict the powers of the Minister. It was put in really to prevent the imposition of a Board on a trade like the steel trade or the coal trade at a bad time. It might be urged that the figures reached in some parts of the steel trade are rather low now, and it might be suggested by people who perhaps did not understand industrial conditions, that there was a case there for a Trade Board. The answer would be in the Act; you cannot have a Trade Board, even if you want it, because the organisation is good in that trade.

13,119. There might be some change made in the Act where it refers to wages being exceptionally low. You might add some vague words like "having regard to"?—Yes; as everyone knows, the history is not relevant. It was so difficult to know what was exceptional. If dozens of trades are paying low wages, is it possible to describe anyone as paying exceptionally low wages?

13,120. *Dame Adelaide Anderson*: But a trade might not be brought under the first Act owing to opposition?—Yes; I do not deny that the Minister's power has been considerably strengthened in regard to bringing trades under the Acts. But what I suggest—though I do not want to press it too hard—is that the conditions which have been obtaining in the trades which have been brought under the Act of 1918 are conditions which might reasonably have been considered under the old Act; indeed in one or two cases the trades were scheduled for inclusion. If you look at cases like the jute and flax trades, which was brought in under the 1918 Act, and look at the figures which I gave you as to their wages, you will see that that is certainly a case which it would have been fair to consider under the 1909 Act.

13,121. The test of wages has not disappeared?—No, certainly not.

13,122. *Mr. Poulton*: But any wider powers that the Minister may now have were fully and adequately discussed in the passage of the Bill through the House and explained by the Minister in charge?—I think that is true. I do not want to run away from your point, Mr. Chairman. I think it would be true to say that, whether we are right in thinking that the trades could have been brought under the 1909 Act or not, they certainly did not think so.

13,123. *Chairman*: It is also true to say that the Boards have taken a somewhat wider view of their duties under the second Act than under the first?—I think it would be true to say that there are more Boards which have fixed scales of rates than under the old Act; but under the old Act the Chain Board fixed scales of rates from the beginning. They have had general minimum piece-rates from the beginning. But it is perfectly true also to say that there are trades now under the Trade Boards Acts which were not brought in under the old powers. But then again you have to look at the general trend of wages in the country. Suppose it is admitted that there has been a development, the question is what should be done; is it desirable to do anything, and if so, what? Various suggestions have been made to the Committee. The first, as I understand it, is that there should be a bottom rate which should be a flat absolute minimum. As to that, I assume that it means four bottom rates. If it meant one bottom rate you would have to take the rate of the youngest girl entering any industry and fix it by that, which I do not suppose was intended by anybody.

13,124. It should always mean four rates?—Yes; there should be two rates for men and women, and two rates for boys and girls. As to that, I suggest for consideration that to fix a single bottom rate would have considerable disadvantages. In the first place I think, if it is a bottom rate at all, it is liable to be based on people who are not really part of the trade. You may take a warehouseman in a distributive trade as your unit; you may take a cleaner in another trade, and you may take a handyman in another trade—they would be the bottom people—and fix the rate on those.

13,125. The auxiliary people?—Yes, the auxiliary and ancillary classes. You might fix the rate on them. That would be no protection to the main body of the trade. What I mean is there is no absolutely sweated rate, if I may use a word which I have been criticised for using before this Committee. A rate which is sweated for a shop assistant who has to wear middle-class clothes and live in a middle-class district may be a reasonable or possible rate for a warehouseman who has not to wear clothes of that kind, and who can live in an artisan district. You cannot say there is an absolute sweated level. I suggest, therefore, if you take the rate of the man who has not got the same obligations on him and fix that as the rate, you are really not helping the people above him. I suggest, on the contrary, that you may run the risk of depressing the people above him by fixing an unduly low rate as the minimum and bringing down to that the rates throughout which may bear some proportion to it.

13,126. You want to establish varying minima according to varying standards of living in different groups of the community?—I would not go as far as that. I am simply saying that you may go too low in the scale—unduly low.

13,127. Is not that what you mean by protection? You are trying to protect the different standards in different groups?—Yes, up to a point, but I am not suggesting I can carry that to too fine a point. I am simply saying broadly that when you are looking at it from the very bottom you are entitled to look at that point. I suggest further that if you did stick to your bottom rate of all, there is the opposite risk. Either you get it too low, or the opposite risk is that you get it too high. It might well be that if you fixed one rate only, the labour view would be: If we can only get one rate, let us get a decent rate. That might result in fixing an uneconomic bottom rate on which labour might say: We are quite ready if we have got several rates, to fix the right rate for each class. If we have only got one, we will fix a reasonably high one. That is a possibility.

13,128. *Dame Adelaide Anderson*: And would not the old evil tend to come back, of the worker in the upper grade, on this uneconomic wage being fixed for the lower, having to revert to the old plan of supplementary work to get a wage suitable for his needs?—Quite conceivably.

13,129. Does not the use of the word "sweating" rather tend to obscure the meaning there? Did not "sweating" also mean long hours?—Certainly.

13,130. And insanitary conditions?—Certainly.

13,131. The word covered more things than just the wage?—Perfectly.

13,132. *Mr. Pugh*: Would you say there is also this possibility; either you would not fix rates at all, because you would never get agreement as to the particular class of worker for which the rate was to be fixed; or if you succeeded in fixing your absolute minimum rate—even if there were four rates—you would exclude from the operation of the Board all the other classes of workers?—You might.

13,133. Unless you had a strong organisation, which is not the case with trades which come under the Boards?—That is so. It is assumed, with some justice, that when you get to the crafts you generally get a sufficient organisation to protect the workers without intervention. But I am suggesting for that reason, Mr. Chairman, for the consideration of the Committee, that there are considerable grounds for going slow before adopting an absolute minimum.

13,134. *Mrs. Lyttelton*: Is it not also your point that the percentage of people in any trade for whom the basic rate would be fixed, is very small compared with the general body of workers in the trade?—That is perfectly true—if you choose the lowest. Then I suggest if there is any disposition in the Committee to doubt the wisdom of the absolute bottom, that the next possibility would be—and I am putting these various alternatives for the consideration of the Committee

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

and not venturing to express a view really; I want to put the difficulties for your consideration—to say that in many trades there are ancillary and auxiliary classes. You do not want to legislate for those classes as being the trade proper; you want to get at what is the trade.

13,135. *Chairman*: The general body of the trade?—The general body of the trade; and you ought to fix your rates, if you are going to have bottom rates, at where the general body of a trade begins, and not at somebody else. Therefore you may contemplate the possibility of having two rates—for men and women—which would be fixed above the rates for the auxiliary and ancillary classes, who would be exempted from those rates.

13,136. You mean they might have special rates?—They might have rates below. It does not always follow that they would necessarily be below, but I think they generally are. That is a possible proposal; but I am bound to put to the Committee that even that proposal has its difficulties, and its dangers. Of course, it is open, I think in much less degree, to the same criticism as the previous one, namely, that it may tend, if the rate is fixed too low, to draw down the higher rates to its level. A more serious difficulty which is urged in many quarters is to state the classes in the trade to which you are going to apply this. For example, if I may take the jute trade, I believe there are 140 time-rates in the case of the spinners alone, starting, I think, at 30s. 6d., and working up to 49s. 10d. at the top. If you fixed it at 30s. 6d.—which I believe is a rate which is hardly ever paid; it is for a very small number of bobbins—you would find you would be covering practically nobody; that is to say, it would apply to a very small class indeed. That is one type of difficulty you may get there. The other type of difficulty is that it was put to you in evidence that certain trades covered by one Board were divided into sections, as, for instance, in the case of the waste materials trade, where you have three sections. It was suggested to you in cases like that, even if you had one rate you ought to have different rates for the different sections of the trade. If it commended itself to the Committee, you would have to consider what effect that would have on definition. If you said there were not to be separate rates for separate sections, then there might be a tendency for a Board like the Waste Board to demand that it should be split up into three, so that there might be a possibility of having separate rates for the separate sections. They would be able to point to the curious case in Birmingham of the Stamped or Pressed Metal-ware Board, and the Coffin Furniture Board. They have separate Boards, but the classes of workers employed are the same; that is, the stamper and polishers.

13,137. That would seem to be an argument for grouping?—On the question of grouping, which was the point I was just moving to, if you group a sufficient number of trades which are distinct, under a Board, I think you exclude the possibility practically of a single rate, because if you get really varying sections of a trade under one Board, I think you will find it extremely difficult to provide one rate which will suit all the various types of trades which you are bringing under it. There is this further point, which I do not want to press, that if you recognise what you may have to recognise, namely, that there are differences between sections of a trade, you might find it difficult logically to refuse differences in process as apart from differences in skill. For example, in the tailoring trade you have got on the garment, at all events in the English trade, the finishers, the machinists and the pressers. They are all different groups and they are all differently paid. It is not really so much a difference of skill as a difference of process. It may be urged, if you distinguish between sections as you do in the case of the stamped or pressed metal-ware and the coffin furniture trades, when in fact the persons employed are the same—namely, the stamper and polishers—what grounds have you for insisting on one rate for people who

are, by virtue of their occupation, separable? I only put those difficulties to you because it would not be right to suggest to you without qualification, that to omit ancillary and auxiliary classes would necessarily be a solution of difficulties in regard to the time basis. That is all I have to say on the time basis so far as men are concerned. I have a point I would like to add about women.

13,138. *Mr. Layton*: You quoted the jute trade, and you said in answer to a question, that only a very small class might be affected. I have the impression that although there are these classes, as a rule there is one class which forms the bulk of the trade, and that in the majority of cases there is a large class below which there is no need for these special rates?—That is partly true. It depends on the character of the trade. For example, if you take the jute trade you have your weavers and spinners from the beginning divided into two broad classes. But I think in a number of cases it would be true to say that you can find a fairly representative class above the ancillary and auxiliary class.

13,139. And the great majority of the workers are probably covered by the Trade Board?—I would not be prepared to go as far as that.

13,140. *Chairman*: Excluding the pieceworkers?—I am leaving out pieceworkers all the time, because I wanted to put a separate point about them. I would like to add that if you limited yourself to the rate above the ancillary and the auxiliary, that would mean you would fix no rate for semi-skilled and skilled operations, either for males or females. Presumably those would be settled by agreement in the ordinary industrial way.

13,141. Or as an alternative they might be settled by agreed resolutions of the Board?—Without statutory force.

13,142. Without any vote by the Appointed Members?—Yes.

13,143. The point as to statutory force is another question?—If you withdraw the statutory force, it seems to me that the arrangements as to voting, and so on, are matters for the parties. It is only important as long as the statutory compulsion follows on what is decided on the Board. Suppose for a moment, in spite of the very considerable difficulties which I have suggested to you, that suggestion found favour with you. I want to put to you that the position of women has got to be regarded specially in any event in my view. You said to me earlier that the skilled man, by virtue of the demand, is able to establish an economic claim which is greater than that of the unskilled. I do not believe that can be said truly of the skilled woman; at least not to the same extent. The experience which I have usually had of the earlier Act was to show that in some of the trades, skilled women like embroideresses who have a very high degree of skill, could not command any higher rate than the less skilled women, and were in fact among the worst instances of under-payment. It is for consideration whether, in view of the fact that the bottom rate for women, even on this basis, would be low, and the highest rate would never be very high, women should not be treated specially, even if you decide not to protect the semi-skilled and skilled men.

13,144. *Mr. Poulton*: Would you not be defeating the object of Parliament itself if you only fixed a rate for the ancillary and auxiliary classes? Was not the object of the Acts to bring in all the people working in a trade?—Certainly.

13,145. And not a small portion of them?—Of course it might be argued that if you took a substantial class in a trade, above the auxiliary and ancillary class, and gave them a rate, the rest of the trade would be protected provided it was a real rate applying to the general body of workers in the trade.

13,146. Suppose the people above the general body were badly organised?—It is true that they would not be able to get the rate above that in the same way that it can be got in the highly organised

22 February, 1922.]

Mr. HUMBERT WOLFE, C.P.E.

[Continued.]

trades; but at any rate there would be an underpinning minimum from which they could start.

13,147. Which they could appeal to?—Yes.

13,148. *Sir Arthur Pense*: But they did get those rates, as a rule, when there were no Trade Boards?—At any rate, the position would be that if you had that rate, nobody who was semi-skilled or skilled would get less than that.

13,149. The skilled man would say: "I want more than the unskilled man"?—He would ask for his proportion. That solution does not seem to me to be open to the very grave objection to which the absolute bottom rate is open.

13,150. As a matter of fact, trades outside Trade Boards did have a differentiation as a rule between skilled men and unskilled and slow men?—There are those trades. If you take the catering trade you find there are proportions. If I may repeat what I said about women, I suggest that if you leave the women completely unprotected—that is to say with only the bottom above the ancillary and auxiliary—you might find that it would be very difficult for the skilled women to get any rate above that.

13,151. Do you not think there is a general tendency for the rates fixed by Trade Boards to become not minimum rates but standard rates?—I think it is difficult to say that. If you look at trades like the jute trade, and take the 6½d. rate, that does not look to me very much like a standard rate, and there are a number of rates between 7d. and 8d. If you take 88 points off that for the cost of living, it is not a very handsome figure that remains.

13,152. I was not referring to that class of case. I think the brush trade adopted wholesale the rates that were arranged between the Trade Union and the employers, and put them into the schedule?—There are cases I admit where a Board has in fact endorsed an outside agreement, and in my view that is a very proper case in which to consider whether the Acts should any longer apply to that trade.

13,153. *Chairman*: I think there are several of those cases?—Our view on that is that if a trade is reaching the point when it can look after itself, it must look after itself. Of course the trouble very often is that when you examine it, you are told: "This is all very well. We can get this agreement because we have got the force of law behind us; but if we had not the force of law behind us we could not get the agreement," and of course there is a certain truth in that.

13,154. *Dame Adelaide Anderson*: There is nothing in the existing law to prevent the Ministry from leaving a trade out in that kind of case?—No; we can cancel. Of course, we have to have a statutory enquiry. I think I told you when I was here last that in the only case in which we suggested rather tentatively to abolish a Board, neither side liked the suggestion at all.

13,155. They are very pleased with their Board?—I do not know whether they are pleased with their Board, but they were not pleased with our suggestion.

13,156. *Mrs. Lyttelton*: You said both sides disliked the suggestion. Was that at all because it was thought that the effect of such a procedure would be that the employers might be broken up?—That is apparently the reason; but another reason is, I think, that in some of these trades the bigger employers still have reason to fear competition from the smaller employers who would not be bound.

13,157. *Chairman*: I think you have no power at present to suspend the operation of a Trade Board?—None.

13,158. You must either leave them at work or dissolve them?—Yes; and if we dissolve a Board we should have to give statutory notice and hold a statutory enquiry under that notice.

13,159. But if power were given to suspend a Trade Board in a fitting case, then if the rate did drop unduly you could revive it?—That might be an alternative suggestion. We have never liked the idea of suspending, because we think it is a Board's business, if the rates are not proper, to get them right.

13,160. But if you have a trade which is so well organised that it is practically able to get the Trade Board to adopt the union scale, then, as you suggest, that might be a case for no longer applying the Acts. But suppose they say: "Do not dissolve it, because the rate will drop," might not that be a reason for giving a special power of suspension?—It might. You cannot dismiss the argument that the agreement is only concluded because they have the force of law behind them.

13,161. But if you merely suspend, you keep that power in the background?—Yes; I have not thought of that suggestion. But there is the other point: if you get a considerable body of the trade agreeing in that way, there may be bad pockets which are not touched by the agreement, and the low wage is commenced at once. You can merely decide on the facts of the case as a whole.

13,162. *Mr. Poulton*: Do you think in that case you could bring into operation the suggestion made at the 1912 Industrial Enquiry, that although the Board might be suspended as a Board, nevertheless the rate should continue to operate for a period which the Minister thought should be obligatory. I am referring to the 1912 Enquiry under Sir George Askwith?—Do you mean the proposal to give statutory force to voluntary agreements?

13,163. Yes.—I would not like to commit myself on giving statutory force to voluntary agreements. You know, I think, better than I do what a long and troubled history that particular problem had.

13,164. But this has statutory force at present?—It has absolute statutory force.

13,165. I am now suggesting that possibly you should suspend the Board but you should not suspend the statutory obligation to pay?—I do not see what the object of suspending the Board would be in that case.

13,166. The expense, for one thing, would not fall upon the Government?—Honestly, I have not thought out this suggestion of suspension. It might be a possible thing to contemplate.

13,167. *Chairman*: It merely arises out of the obvious difficulty of dissolving the Board altogether, which has been so great that you never have dissolved a Board?—That is so. It is not merely because the difficulties are so great, but we have not thought that the case has been absolutely established for abolishing a Board up to the present.

13,168. If it was necessary to prevent the payment of unduly low wages, the mere fact that wages have risen would not be enough. If you stopped the Board the wages might fall again?—Yes, that is the danger. All that I said on the special rates related, of course, to the time-rates. Then there is the question of piece-rates, and as to that it was put to you very strongly, and, if I may say so, very well indeed, that one of the vital reasons for fixing piece-rates is the question of the home-worker. You cannot employ home-workers on time-work. I think a large proportion of the work in Trade Board trades is piecework, and therefore I think power should be kept to fix piecework bases. If you confined yourself to the auxiliary and ancillary workers, you could lay it down that the piecework basis should be the actual time-rate, or the piecework basis time-rate, which is generally 1d. above the actual time-rate. That would not be going as far as in the cases of the chain trade, where you have a rate of 1s. 1d. as the basis for certain of the work, but 1s. 7d. as the basis for the heaviest chain, which is the highest class of skilled work in the trade.

13,169. Would it not be far better to have a piece-rate and have done with it?—The piecework basis time-rate is the rate which is fixed generally for the trade, and is about what a worker ought to earn. To fix the actual piece-rate for each job is a long and difficult task.

13,170. At any rate, there always has to be a calculation to see whether the ordinary worker can earn the rate?—Yes. From the point of view of administration it is twenty times easier if you have got an

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

actual piece-rate instead of a basis rate alone. But there are reasons why trades have adopted it slowly; for example, it is not always easy to decide what the price of a job should be. Should you base it on a very competent worker who is working very quickly, or on an incompetent worker?

13,171. For a home-worker a piecework basis time-rate has no value, because it is very difficult in the case of a home-worker to find out whether he is earning the piecework basis?—It is better for the home-worker to have a definite piece-rate for a job, and several Boards have fixed general minimum piece-rates. It is not a very easy thing to do, and very often employers are glad to have our inspectors in to help them out. They sometimes run to a very large number.

13,172. Mr. Pugh: You would fix your piece-rate on a time earnings' basis?—In any case you do. If you take your general minimum piece-rate you can either take the minimum time-rates and work to them, or you can do as you generally do take a piecework basis time-rate and work to that.

13,173. Sir Arthur Pease: But in some trades it would be absolutely impossible to fix piece-rates all through?—I should think it would be, and in those cases you would not attempt to do it.

13,174. And therefore you must have this other system for measuring the rates?—You must have the other system in operation.

13,175. Chairman: But you could measure the yield of piece-rates by the piecework basis time-rate?—Yes.

13,176. Sir Arthur Pease: And to have a sort of similar rate is quite usual in organised trades?—Yes. The only other point I wanted to make, if you decided to fix all the rates for the skilled and semi-skilled as well, is that there is no reason why you should not have power to keep your piece-rate up to the same point as at present. If you had no power to take the piece-rate up to the 1s. 7d. time basis in the chain trade, they might say: "It is not worth while having piece-rates, because we cannot cover half the trade." The only other point I wanted to make is that there has been a suggestion that the appointed members should not vote on the fixing of general minimum piece-rates, because they have not got the knowledge. On that it is no defence, I know, to say that they never have voted, because they could do so. But the fact that they can seems to me to be good rather than bad. It prevents a possible deadlock, and I think it is right that they should at any rate vote, as they do, on the piecework basis time-rate—the basis on which all these rates are fixed—and if there is a difference between the parties on any given rate which is capable of explanation to the Chairman, he is just as well able to give a vote or a decision on that as on any other thing. There is nothing which cannot be explained in such a way that an outsider can have a view.

13,177. Mr. Pugh: Would you think it a good alternative that in those cases, instead of the appointed members voting between the parties there should be reference to some suitable Court?—The only thing about that is you know what a long business fixing a piece list is. Here you have had two lots of people sitting for a long time together in arriving at this list. They have, say, three items in doubt and they cannot make up their mind. This man has been sitting with them, and he has heard all they have to say. They put it to him, and he arrives at a decision. In fact, they have always agreed without his intervention. I think if you elected to put piece-rates to an outside authority you might get the difficulty we had during the war, when the Ministry of Munitions tried to intervene on some question of payment by results, and found it was rather a hornets' nest.

13,178. Do you suggest that the very fact that the Appointed Member may be called upon to decide tends to make the parties settle among themselves?—I think so.

13,179. And would you say that as soon as you did away with that, and provided an outside Court to settle differences which the parties could not settle

among themselves, the tendency would be to refer to that Court unduly often?—I do not think it would have the same sort of tendency as I suggested in the case of the tribunal, but I think it would have a tendency to bring that about.

13,180. Sir Arthur Pease: Suppose the Trade Board came to a deadlock over rates, would they have power to refer to some outside expert?—They could consult an expert. Although an accountant is not an expert on piece-rates, they could appoint an accountant to go into the books; he could advise them.

13,181. Chairman: They could agree to consult an outside person?—Yes, if they were willing.

13,182. Sir Arthur Pease: If the employers said they could not accept the rates and the other side insisted on them, they might go to a third party?—That has not arisen in any of our cases. The Chairman ought to be able to give a sensible decision.

13,183. Mr. Bell: In the case of a Board which was fixing rates for piecework wanting expert advice, I was wondering where you would find your experts outside the particular trade for which the piece-rates were being fixed?—I do not know where you would find them. You must go to the trade itself.

13,184. Mr. Pugh: As a matter of fact, arbitrators are not experts?—If you want a man to settle a rate because he understands all about it and not because he has arguments put to him, the *ex hypothesi* expert, I should have thought you would want a person in the trade. If you want an arbitrator, anybody with a judicial mind ought to be able to do it.

13,185. As a matter of fact the experts in the trade who know all about it are on the Trade Board?—Yes, and then they are on the committee for fixing piece-rates.

13,186. Mr. Layton: Should you not draw a distinction between the functions of the State in relation to piece-rates and time-rates in view of the fact that a piece-rate is a highly technical thing which is constantly varying, whereas a time-rate is a standard of earnings? Does not the non-payment of piece-rates stand in rather a different category from the non-payment of certain standards of earnings?—I cannot follow that. The time-rate is a time-rate, and the piece-rate is based on a time-rate or a piecework basis time-rate.

13,187. You might bring into Court a whole series of rates which form the component parts of a man's income?—Yes, but those component parts form the basis, and if there is any change in economic conditions you can change your basis.

13,188. But it would be much more complex?—I agree, of course, that it is much more complex and it obviously is not so elastic, as when you have once fixed an enormous series of rates, it is a great inconvenience to alter it again.

13,189. But the point is that you make every item in that a legally enforceable thing?—Yes; but, after all, every individual item aims at producing a particular figure just as a time-rate aims at it.

13,190. But there is a great difference in giving legal sanction to the whole and giving legal sanction to the component parts, which may vary enormously?—Yes, but each of those parts has been fixed, just as the cotton list is fixed, by experts in the trade, and if there is anything wrong with it it can be changed. If there is any reason in having a piecework basis at all, there seems to be no reason why, if you elaborate it into the form of individual rates for individual jobs, you should not make people pay those rates by law just as much as you make them pay the basis.

13,191. Mr. Pugh: Is there any essential difference, as far as the relationship of the State is concerned, between enforcing an agreement which provides for 2½d. a ton and an agreement which provides for 6d. an hour?—I do not think there is, put in that way, any difference. Of course, Mr. Layton was thinking of a much more elaborate system of rates than 2½d. a ton.

Mr. Pugh: Each rate would be taken in the same sense,

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

13,192. *Chairman*: Is there any difference between saying: "You must pay a subsistence wage, which we will fix, say, at 55s. a week, or you will be guilty of an offence against the law and may be punished," and saying to the same man: "You must pay this man a rate of 96s. a week, even although he is willing to work for 20s. less, or you will be guilty of an offence?—I do not quite understand. How would the 96s. arise? Would that be a piecework basis rate?"

13,193. I am speaking of the skilled rate?—I think it is open to argument that there is a difference in those two cases. The answer of those who defend the existing system would be: "Well, the number of people getting 96s. is very few. That is not the point over which there is a struggle on the Board." It is the minimum on which the struggle is always arising, and the existence of the 96s. is a help to the people throughout the trade to get good minima.

13,194. *Sir Arthur Pease*: That is not my experience on trade or other boards. I find it is the higher-paid man who fights for advances far more than the lower-paid man?—I am afraid I did not make myself clear. That is exactly what I intended to indicate. I was saying that the existence of the higher rate and of the 96s. men tend to help the others to get a better rate.

13,195. I do not say the highest rate of all, but the highest rate of the large body of people in the trade. It is those people who are most pressing generally with regard to wage matters?—Yes.

13,196. *Mrs. Lyttelton*: I suppose the arrangements made under a trade board are not more complicated than the arrangements made between a trade union and an employer?—Not at all.

13,197. The difference is the statutory enforcement?—Yes.

13,198. Is not the philosophy of the thing that the trade union has the weapon of the strike and the unorganised trade has the weapon of State enforcement?—That is the principal difference.

13,199. *Mr. Pugh*: Would you mind following up the point raised in Mr. Layton's question, because it is not quite clear to me what it was he wanted to bring out. Would not the point be met by saying that whether an agreement is an agreement for piecework rates or an agreement for dotal rates or hourly rates, the State only comes in as the enforcing authority on an agreement entered into between the parties in the trade who have made arrangements consistent with the trade?—In the case of a Trade Board.

13,200. That being so, what point would there be in Mr. Layton's distinction as between an agreement for piece-rates being enforced and an agreement for dotal rates being enforced?—I confess that I did not myself quite get it.

13,201. *Mr. Layton*: Is it not the fact that there are two quite separate things? One is that the State may step in and give authority or sanction to the whole system of wages in a trade, skilled or unskilled, piece-rates and others—giving the force of law to the whole thing. That is State regulation of wages. But under the other conception of the State intervening in order to ensure the minimum, the State ensures that people get a certain amount. That is quite different. The one would include the fixing of piece-rates as well as of skilled rates; while the other could be entirely effected—except as regards home-workers—by fixing the time-rate and a piecework basis time-rate?—Yes, but I think it would be a pity that people should not have the power. There have only been a few cases where a general minimum piece-rate has been fixed, and they have always done it extremely well. The brush trade are very pleased with their general minimum piece-rates. I do not think there is any real case in theory for upsetting those.

13,202. But you would agree that there are two entirely different objectives?—I agree there is a difference between fixing a piecework basis and fixing a piece-rate for each item.

13,203. I mean a State system of wages covering the whole thing, and a system which gives the minimum protection?—I am bound to say on that that it

would not cover the whole trade if you fixed your piecework basis time rate always in a fixed proportion to your general minimum time-rate. Suppose you adopted the proposal that you are going to have your general minimum time-rate only just above the ancillary and auxiliary rate, and your piecework basis time-rate always bore a proportion to that, a part of the trade would not be covered at all, because you may fix piece-rates for the highest skilled men.

13,204. But it would be covered so far as the minimum was concerned?—I agree, as regards the minimum.

13,205. Because even the highest skilled pieceworkers would, carrying it to an extreme, have to have such rates that they would reach that figure?—I agree. I think, without intending any disrespect whatever, that the objection is rather one in theory. I think that in practice this power has been rarely used and when used has always been used in agreement, and it has been found by the Boards who have used it to be useful. Of course I have no right to urge this strongly, but as an administrative convenience there is no question whatever of the value of the general minimum piece-rate.

13,206. *Mr. Pugh*: As a matter of fact, taking into account all past experience of Wages Boards, and machinery of that kind, you could not make your Trade Boards effective if you simply confined them to fixing rates for part of the workpeople coming under the boards. There is an absolute necessity it seems to me, speaking from experience, for them to go on and do something for all the workpeople?—They probably would; and if they dropped the force of law, they would probably do the rest by agreement.

13,207. But there is the possibility that where you are dealing with a very large percentage of women workers in a trade you will probably find that only the good employers would pay suitable rates to those people if they were not forced to do so?—I mentioned the case of the women. They would be at a very considerable disadvantage.

13,208. *Dame Adelaide Anderson*: Of course women would be rather at a disadvantage if they were singled out to have their wages regulated apart from the men?—There is the possibility that you would say that the women were economically hurt; but I do not think it is a very real one, because it is unlikely that men would be employed even at the rate which would be fixed for women. I mean you would have to pay men more on the market, anyhow, than the slightly higher rates fixed by statute by the Board. Of course there may be a little disposition among labour to challenge more protection for the women, because it has been felt very often that women's labour is one of the sources of weakness to male labour owing to the fact that on the whole they can be obtained cheaper.

13,209. Is it not the fact that as the result of the regulation of hours in the cotton trade men got protection?—Quite. And during the war the rates fixed for women on men's work in the engineering trade were fixed partly on the women's account, but by no means only on that account. It was partly to protect the men's position in the industry.

13,210. That is not a very satisfactory position. It is better to do it to protect both?—It is a matter of sex pride, I suppose. Putting it thoroughly on its merits, without considering men, I think the protection of women is worth looking at seriously.

13,211. *Chairman*: Before you go to your next point, have you any views about the slow worker?—Do you mean about exemptions to the slow worker?

13,212. Yes.—That is a difficult question. Of course at present there is no power to exempt a slow worker simply on that ground; but it has been suggested that you should exempt the slow worker. If that were done too widely, or if it were abused, you might knock the bottom out of any rate in the trade by a sort of attempt to say that everybody was a slow worker.

13,213. It could only be if they were a party to it?—That is so. I am not sure that it is an impossible thing to have a properly safeguarded exemption for slow workers, because every case would have to be

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

approved by the Trade Board, including the labour side. I believe there are trades—I think the boot and shoe trade is one—in which there is a very restricted system of exemptions for slow workers.

13,214. *Sir Arthur Pease*: If you do not do something of that sort you are going to cut out thousands and thousands of people in normal states of trade from ever getting any employment at all?—You have to remember that the very large majority of our people are pieceworkers.

13,215. Leave out the pieceworkers. Take a case where it is impossible to employ people on piecework?—On time-work, if you have got a statutory minimum, and the person cannot earn it and the employer cannot afford to pay more than the person can earn, they would have to go. You cannot pretend it will not be so. Whether it is economically right or wrong is not for me to say, because there may be other people who can come in and earn the rate.

13,216. *Dame Adelaide Anderson*: There may be other trades for which these slow workers are better suited?—Yes. Of course the result of keying up an industry is always that the weaker go to the wall, whether it is done by statute or by ordinary trade methods.

13,217. *Chairman*: Still, if a person is, for any reason, incapable of earning the minimum wage, you think the method of exemption might be extended further?—Yes, I think so.

13,218. Then you were going to pass to the question of grouping Trade Boards?—There is only one point I want to make on that. It is quite a short one with regard to definition. I feel it is a very difficult thing to group Boards, partly because it will involve many more rates than one, because it would have to apply to the sections. But I do not think it is quite realised how strong the opposition is between one trade and another. They want to settle their own affairs. If you take the distributive trades and suggest to the butcher that the baker is the right person to fix his rate, he does not think so, and he tells you so quite distinctly. Therefore we have always got that before us when we are defining a trade. It is suggested, of course, that we have set up our Boards rather too quickly and without sufficient consideration. We have always answered: "Well, there is a possibility of a statutory enquiry," and we have never been pressed to it. I am not sure, in view of some of the feeling that has been expressed, that it would not be a good thing for the Minister to have power to hold an enquiry in each case.

13,219. Would it not be better to say that he must hold an enquiry?—I have not ventured to go as far as that. It might be desirable to have an enquiry in each case.

13,220. It would prevent your having to make local enquiries and having to receive all these deputations here if you had one general enquiry before setting up a Board?—I do not think so. I think before we could make up our minds that we had got to the point of proposing a Board we should have to be fully satisfied ourselves what the local conditions were. What the enquiry would relieve us of would be the suggestion that we had imposed the Board in an arbitrary way without sufficient regard to the facts. If it was made compulsory in every instance, of course, where there is a unity of demand—like there is in the provender trade—that would lead to delay. I do not press the point at all. I should have preferred that the Minister should have power to hold an enquiry. At present he cannot hold the enquiry at will. We have never had an enquiry, because we have never been pressed to hold one, but we could not do it simply if we wanted to.

13,221. There have been cases where you have been asked to hold the enquiry, but people have been rather persuaded to withdraw their request?—I accept that. But we have never set up a Board where they ultimately have not agreed. I do not say that would be so if we had gone on lately. I have mentioned the grouping point, and that really brings me to the next point, which is a much more important one from

my point of view, and that is District Committees. I do not know whether you would like me to take that now?

13,222. If you please.—You have had it given in evidence that, in fact, though the Boards have power to set up District Committees, they have not used it. One or two Boards have set up District Committees, but, either owing to the districts selected or to the power vested in the Committees, they might just as well not have been there. It has been suggested for consideration whether something ought not to be done to alter that position, because it is pointed out in great trades like the engineering trade and the building trade, and even, I believe, the steel trade—though I am not sure about the steel trade—but at any rate in the engineering and building trades, it has been a long-standing arrangement, and it has been asked why that should not be applied to Trade Board trades. I should like, if I may, to distinguish clearly between the distributive trades and the manufacturing trades in this respect. The distributive trades, except on the wholesale side, do not compete from one district to another. It does not matter to a grocer in town "A" what a grocer in town "B" is paying, because his customers are in his own town, except in the case of the big stores. Therefore the peculiar argument which applies in the case of manufacturing trades would not apply in the case of the distributive trades. There is just one consideration, whether one way of handling the distributive difficulty might be on a district basis. I am not suggesting this as a final solution, because it is full of difficulties; but we know that the national basis has led to considerable difficulties. We do not feel that in the normal way it is easy to combine a statutory committee with a statutory central body. We have a feeling that if you are going to have District Committees as a solution in the distributive trades, they will have to be autonomous District Committees settling their own rates for their own districts.

13,223. They would really be District Boards?—Yes. A difficulty we feel about making them subject to a Central Board is that that would lead to delay; it might lead to endless friction between the District Board and the Central Board, and although I do not want to go into it now, it is the fact that the one thing which was said most definitely by all the Agricultural Wages Boards when they were re-constituted was: "No Central Board. We are going to settle by districts." That was because the experience the Committees got with their Central Board was that it led to a certain amount of difficulty. We think if the Committees are to be set up in the distributive trades—and with the distributive trades I put for consideration trades like the laundry trades and one or two of the sewing trades—you would have to consider whether they should not be autonomous District Boards. As to whether one District Board could cover the whole of the distributive trades for the district is not so clear, I think. You would find it very difficult, I imagine, to persuade your distributive trades in a district to come at once under one Board. What I thought was that you could give them the option. Let them have a certain number of Boards to begin with, with a power to amalgamate as and when they see their way to it, and possibly start with a Joint Committee at the beginning to deal with any point, such as a Stores in London with 10 or 20 trades in it, with the hope that they would come together.

13,224. *Mr. Pugh*: When you talk of distributive trades, you mean retail?—Yes. You would have to deal with the wholesale separately, probably on a national basis, because in the wholesale there is just as much competition as in every other trade.

13,225. *Mr. Layton*: What have you in mind as regards numbers?—I think one of your witnesses here who was not very favourable to Trade Boards as a whole suggested you would have to have 50 Trade Board districts. I do not think that is necessarily true. I think you could group the South-West and some of the South-Eastern counties. Of

22 February, 1922.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

course, London would be separate. There might be anything from 15 to 20, but not, I think, more.

13,226. *Sir Arthur Pease*: Something on the lines of the co-operative societies?—Something on the lines of the building trade districts.

13,227. The wages paid in the co-operative societies, which have been regulating wages for a very long period, for the whole body, is one of the points which has come out?—I do not want you to assume that this would be an easy solution. I think it would be much disliked in certain quarters. I think it is open to very grave objection. You get considerable variation, possibly not based on very good grounds, between district and district. You get, of course, the overlapping at the edges; you have a shop almost next door to another which would be on a different basis, and there is no explanation why it should be. All those things would happen. On the other hand, you will not be met with the very strong criticism that we constantly hear, that London is dominating the rates, or that the big towns are dominating the rates, or that the smaller towns have not had their peculiarities considered.

13,228. *Mr. Pugh*: But surely they have now the power to set up District Committees?—They have, but they have never availed themselves of the power except in such a way as to render it nugatory.

13,229. Do you say that the trades themselves see no necessity to set up such Committees?—That applies to the manufacturing side; but in the case of the distributive trades, the Grocery Boards have fixed rates on a scale according to population, and that recognises that you have to have some sort of a district basis. They have not constituted Committees, but they have settled three scales—"A," "B" and "C"—and I think it would be fair to say they have found great difficulty in the application of such scales.

13,230. What I was thinking was whether it is desirable to force upon the trades suggested something which, up to the present, they appear to have shown they do not want?—I am talking about distributive trades at the moment. So far as the manufacturing trades are concerned, I agree it would be very difficult to force District Committees on them against their will. I think if you set up a District Committee it might lead to such grave trouble on both sides that you might just as well give up the Board. But I think even there you might have a power to establish District Committees if, in the view of the Minister, they were absolutely essential, because it might well be that with that power some of the reluctance which Boards feel—and which is not always based on the best of grounds—might be overcome. It cannot be that what is good enough for the building trade and the engineering trade and half-a-dozen other big trades, cannot be good enough in principle for the Trade Board trades.

13,231. Except that one is somewhat anxious that the Trade Boards should work out their own problems. While it is good to point out the advantage of District Committees, it would not be desirable, I think, to lay down that they must set up District Committees, whether they think District Committees would help them or not?—I distinguish between the two classes of case. In the case of the manufacturing trades I think what the ordinary Trade Board would reply to my point that I have made about the building trade would be: "In the building trade you are taking individual standard rates. That is one thing; they do vary from district to district. But we are talking about minimum rates, and there is no point in considering them from district to district." That is the answer which would be given. I do not know that it is a true answer. But I would not suggest that you should compel them, except in very unusual circumstances, to adopt anything in the way of district rates against their will. It was given to you in evidence that some of the employers were strongly in favour of District Committees. They cannot get them for two reasons—not only because the labour side is opposed to them, but sometimes because

some of their own side in the big towns do not want the District Committees for reasons of their own.

13,232. *Sir Arthur Pease*: Do you not rather mean industrial districts than the big towns?—Yes, I mean industrial districts.

13,233. *Mr. Pugh*: Would you like to have one Board for the retail provision trades and then set up District Committees in connection with the Central Board?—My view is that a system of District Committees, except in rather unusual circumstances, is not very easy to combine with an effective Central Board. I think you have really to choose between an autonomous Board and a Central Board. I qualify that later about the District Committees, but I should not impose them on the distributive trades. I should say to the distributive trades: "The method by which you approach wage settlements in your trade is by districts. There is no national basis ever." I should not say to an existing Board—I should not say to any manufacturing trade: "You have got to have District Committees." I should simply say: "Do you or do you not want District Committees?"

13,234. Do you think a central advisory body would be of assistance to Trade Boards in dealing with problems of this kind?—Do you mean a central advisory board for the distributive trades?

13,235. No, generally?—I do not think it would help in this connection. If you had a central advisory body at all, I think it would have to consist of the national organisation in the trade which could give advice to the Minister, on any rates that were put to him if he wanted it. I do not want to be taken as recommending these autonomous District Boards for the distributive trades. I simply say if they were adopted you could have much closer regard for local and district feeling than you do have now, and that very severe complaint has been made to us that sufficient regard is not had to local feeling.

13,236. *Mr. Layton*: Is there not the other point, that the District Committees would have to be so organised that they would have no power at all, and that the reason why they have not been used is because the machinery is unsuitable?—I agree. If you have District Committees and a Central Board, then the District Committee must have as Appointed Members, if it is to have them at all, local people, and the liaison between the two should be the member of the Board who happens to be the nearest district member. It should not be as now, that the employers' Chairman and the workers' Chairman and the Appointed Member should go to the local Board, because then you do not get local views.

13,237. *Chairman*: One point raised was that a Board cannot dissolve a District Committee?—They cannot dissolve it, but they need not use it.

13,238. They cannot fix any rate without consulting it?—It is not very difficult to post the rate to them. I think clearly that there ought to be the power, if it does not exist, of dissolving. I am not at all unconscious of the great difficulties of the District Committees. If you impose District Committees against their will on a Board, you may get every sort of delay and increase of friction. Suppose you had this state of affairs: A Central Board which was compelled to have District Committees—say, ten Committees—sending up different rates based on different scales, and all of them turned down by the Central Board which fixed a national rate of its own, and everybody—the ten Committees and the Central Board—coming to the Minister complaining, and all the 11 rates coming as well. That would make the position mad, so that it is not an easy thing to decide. My view is that in the distributive trades you might get over it possibly by autonomous Boards; in the manufacturing trades you might meet it by a power to impose Committees in exceptional cases, but it would really be understood that the Board would only set them up by agreement on the lines I suggested in reply to Mr. Layton's question, and not on the present basis which results in their being dominated completely by the Central Board.

13,239. *Sir Arthur Pease*: My experience of Central Boards and District Committees in organised

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

trades is that discussions locally are much more free and open on both sides than they are when you get up to London where you have just set speeches on both sides. Do you think that would apply here?—I think you might get more consideration in a frank way of some of the local problems if you had District Committees.

13,240. It all depends on the composition of the body negotiating on both sides?—Certainly.

13,241. Mr. Poulton: You would have to limit their power to some extent; that is to say, they would not be able to break principles?—No. I should put it: if you have a District Committee and a Central Board, the District Committee could initiate the rate, but it would be subject to the veto of the Central Board. If the Central Board would not accept the rate, then it simply would not go any further.

13,242. Chairman: You have something to say about questions of scope?—Yes. On questions of scope the position is unsatisfactory, and it is admitted to be unsatisfactory. As you know, nobody except the Courts has a right to decide on a question of scope. It is perfectly plain, I think, that there must be somebody who can decide that, and that there should be some authority set up. There have been various suggestions made. If the sheet were completely clean, I have no doubt in my own mind that the right thing to do would be to appoint somebody like the Umpire for unemployment insurance. A person of that kind is the obvious authority to set up. It is a very difficult position for the Department to be in, constantly having to decide these vexed questions. It is very difficult to convince the Board that a question of construction. But you find in a large majority of cases the points are questions of construction, and it is very difficult to convince a Board, which knows its own business all right, that it perhaps does not know this business of construction as well as it had thought. Therefore, it would relieve us of a very considerable load of responsibility and difficulty if we could have the Umpire as the deciding authority. But again, on that there is this point to be considered: The Umpire was set up originally by the Insurance Act of 1911 to decide both claims to benefit and these scope cases. For some reason—I think it was to establish uniformity under the Act of 1920—the power as to scope was taken from him, and to-day he only deals with questions of benefit. The power to decide scope now is vested in the Minister of Labour himself, just as a similar power was vested at the beginning in the National Health Insurance Commission. It is suggested for your consideration that while there is a great deal to be said for an outside authority which would relieve us of a great deal of odium, it may be difficult to disregard what has happened in respect of unemployment insurance. You can easily see there may be difficulties. Take the catering trade which is not covered by a Trade Board at the present moment, but it might be if the case were established. In that case we might decide that a particular waitress in a hotel was in fact covered by the Catering Board. I mean the Umpire might decide that. The position of that waitress might also be receiving consideration from the point of view of unemployment insurance, and it might be decided that she was a domestic servant and therefore not covered by the Insurance Act. Therefore, you would have her out for insurance and in for the Trade Board. I do not say it is a very considerable point, but it is one to consider.

13,243. The Umpire only determines individual questions, does he not?—Yes; he only decides on cases put to him.

13,244. Affecting individuals?—Yes, only individuals.

13,245. Would that be sufficient for Trade Board purposes?—I think so, because we have two points: We have the interpretation of the Order itself—the meaning of a phrase in the Order—and assum-

ing there is no dubiety about the meaning of an Order, as to whether that particular person is indeed a person described in the Order—

13,246. I think the kind of cases we have heard of are rather cases of that kind, where the Trade Board is asked whether a particular class of person comes within a Board?—We should be quite content that that particular type of case should be settled in exactly the same way as the others. But I am bound to put to you that Parliament revised its original view, which was that the Umpire should decide this type of question, and invested it in the Minister of Labour, and I suggest for consideration whether it should be the Minister of Labour or an outside authority. I am reminded that in every case there is an appeal to the High Court. It is suggested definitely that there should be an appeal from the decision to the High Court. That is the case as regards the Minister of Labour.

13,247. You would make the decision of the Minister of Labour binding and give an appeal?—Yes, either that or do the same as the Umpire.

13,248. We have had the suggestion of referring it to some central Trade Board for enquiry?—These are so clearly questions of mixed law and fact that it is necessary to get legal minds on to them—really it is. The Trade Board, quite naturally, interprets broadly what it knows the trade to be, but it does not in the least follow that that is the meaning of the words. They say, on the other hand, with some justice: "Well, we know the meaning of the words, but we do not know the meaning of the trade."

13,249. Mr. Pugh: But is not this a case of whether an individual comes within a trade, or not? What can be the question of law?—You have got to decide what the meaning of the words is in respect of which it is claimed that the individuals are in. You have to establish the fact that he belongs to a class covered by the Order, and that raises a preliminary point as to whether he is covered or not.

13,250. That is after an Order has been made?—Yes.

13,251. That is where the question of law comes in?—Yes. It is very rarely a plain question of fact. You have a certain type of worker—say an errand boy. He works in a certain part of a shop. You have to look very closely at the wording to see whether the wording which covers the casual workers can in fact be construed to cover the case of that errand boy. From the point of view of the ordinary person you say: "Of course this fellow is in the trade. We could not carry on without him." But when you look at the words you have to be sure that you thought of that when you framed them.

13,252. Mr. Poulton: Would you not give the Board or the Minister power to say that having come to a decision that the person was in the trade, that would carry an obligation that he should be considered to be in the trade?—All that I would say is that if an Umpire or the Minister gave a decision, that would be binding, subject to an appeal to the High Court.

13,253. Mr. Pugh: I should have thought that when once a trade decided that individuals were inside the trade, really no question of law could be raised, and that they might be accepted and brought within the Order?—It would not be as simple as that, because you would get a Board like the Rope, Twine and Net Board saying that beatsters are covered by them. It is certain that they are not so covered. The Rope, Twine and Net Board say they are covered because they think they are part of their trade; but we say they belong to the fishing industry because they work chiefly for fishing boat owners. The Board are all agreed that beatsters are covered; but what they really mean, I venture to suggest, is that beatsters ought to be covered, which is not the same as saying they are covered. Besides, as I am reminded, another thing that arises is that you have two trades contesting between themselves as to whether a particular person is in their trade or not. If both of them claim him and both are able to decide, then he would be in two trades.

22 February, 1922.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

13,254. *Dame Adelaide Anderson*: Then the beatster would be in the fishing trade if a Board were set up?—The suggestion, as a mere matter of history is that we promised that beatsters should be in. We are not conscious of having done it; in fact the records are entirely the opposite. But leaving that on one side, our impression was that the beatsters were more akin to the fishing industry than to the rope, twine and net industry.

13,255. And you have a legal decision more or less?—Yes, we have. As I say, it might be established by the Umpire. The Umpire might take a different view of the Order from the one which I claim to be so clear; then these men would be in. But it is really a question of the wording of the Order, and we suggest they are not covered in that case.

13,256. *Chairman*: Then we pass to the proposals for creating elasticity in the working of the Boards. In the first instance there is the point as to the time which should be allowed for objections. We have had a good deal of evidence on that.—What I suggest is, I think, two months for the first period, and one month after that. The other point which I think is perhaps even more important is to give the Board power to vary the rate at the fixing stage. You will remember that is a very severe handicap at present, and we suggest that they should have power to vary at the fixing stage if they think the objections justify that course; subject to this, that the Minister might, if he thought the objections too considerable, require re-advertisement.

13,257. *Mr. Pugh*: Would you have that varied by general agreement on the Board?—No, either by a complete agreement or by a majority. If they varied it on the Board I should say the Board are entitled to make the variation in the fixing stage. But I said that the Minister should retain a power to require re-advertisement. Clearly, if he thought it was a very contentious case he might think it was a case which required re-advertisement. For example, if at the fixing stage wages were increased or decreased 3d., one side or another might take that very seriously to heart, but they might be out-voted by the other side and the Appointed Members. The Minister might think in a case of that sort he ought to require re-advertisement. But if it was a variation to put in classes or to bring in certain towns, as was done in the grocery trade, that is clearly a thing which ought to be possible, in my view.

13,258. *Chairman*: Can you suggest any easing of the process of giving notice?—What we thought was in order to save time at the very beginning, you might date the notice from its appearance in the official Gazette. That would probably save you three weeks.

13,259. And it would give the district people less time for objecting?—If it was a first case, they would have two months. If it was a new case their Associations would have an opportunity.

13,260. Would it be possible in the Order to fix the time for coming into operation? A great complaint was made that they did not know until the Minister's decision came out when it would come into operation?—It can only be subject to the Minister's decision. I think in one trade where we referred it back, we said: "We cannot confirm this, not because we think the rates are wrong, but because the time when they are coming into operation is wrong. If you will vary that it will be confirmed."

13,261. Subject to that, it might be well to allow the Boards to name dates?—Yes. The only point is that it might give rise to a misunderstanding. The employers might think that a particular date was fixed, and make arrangements for their wages, and find it was not so. I do not think it is a very material point.

13,262. *Sir Arthur Pease*: Can a rate ever be made retrospective?—No. We had great trouble with that under the Munitions Acts. Our rates are not retrospective.

13,263. They cannot do it?—No.

13,264. *Chairman*: There are some small points about removing minor restrictions?—Yes; they are

only minor restrictions. What I suggest is that whatever classes of rates you leave to the Board, within those classes you should give them as much freedom as they can possibly have, and not tie them up in any way. For example, at present they have only got power to fix what I think are called straight piece-rates and piecework basis time-rates. They have no power to fix payments by collective bonus and things of that kind. We think they should have power in regard to collective bonus, premium bonus, and all those things. One of the troubles which has arisen is that you cannot fix daily or weekly overtime rates subject to conditions. You can either fix a daily overtime or a weekly overtime rate, but you cannot fix a combination. You cannot say to those on a daily basis: "You shall not be paid overtime on any day unless you have worked your 48 hours a week." It is not possible under the Act. It is for consideration whether you might have that power.

13,265. *Sir Arthur Pease*: Do you mean to provide for the case of a man who was off a couple of days?—Yes—a bad time-keeper.

13,266. A man whose work was in arrear and who might make it up by working a bit longer?—Yes. A man might absent himself for three days and if he is on a daily rate he is entitled to overtime on the three days that he worked. It might be desirable in some cases to say: "You shall get your rate by the day, but only if you work your week." That cannot be done by law as it stands.

13,267. *Chairman*: Would not that make it possible for an employer to say: "I do not want you to-day," and so deprive a man of his overtime?—I suppose that might be possible, but it would be his own fault. Another point that I wish to mention is rather a tricky thing. It is with regard to fixing a conditional series of rates. I have great difficulty in explaining it because I tend to forget it. But at present you can say that at certain fixed periods certain rates shall come into operation. You cannot, however, say that those rates will come into operation at those fixed periods provided some other factor, such as the cost of living, operates. You can say, for instance, that on the 1st January and the 1st May the rates shall apply in London, but you cannot say they shall apply only if the cost of living has reached a certain point. You cannot fix conditional rates in advance. Several Boards have complained of the lack of that power, and we think it quite proper that they should have a power of that sort if they desire it. It does not alter their position or their powers; it simply means that they could do their work more expeditiously, and automatically avoid giving notice when the time comes. They could then say that the rates should come into operation provided the cost of living had reached such a rate.

13,268. Would it enable them to say that the rates shall rise or fall with reference to the cost of living?—Yes.

13,269. And without reference to any particular date?—Certainly, if they wished to.

13,270. *Dame Adelaide Anderson*: Would you have a limit to the Board's power to do that by requiring agreement?—No; we should leave it in the same way as in the case of an ordinary rate.

13,271. Because it does assume that the minimum rate has more regard to the cost of living than to the capacity of the trade?—I think that is a perfectly good point, and that is one of the reasons why in some cases they would not avail themselves of it.

13,272. It is a great concession; it is the need of the human being?—Yes. I do not think it is necessarily the right basis.

13,273. I am only just asking whether it does not greatly strengthen the argument for the living wage?—I think up to a point it might; but I think it is only one factor in the power they have.

13,274. *Sir Arthur Pease*: If a rate was on a sliding scale on the basis of the cost of living, or any other basis, would the six months expire from the date on which the sliding scale was fixed or from the date

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

when the arrangement started?—I should suggest abolishing that six months' period altogether. Taking that point one step further, if you fixed the sliding scale you would not need to give notice again; the thing would come into operation automatically.

13,275. But suppose the sliding scale is found to be wrong—either too low or too high?—I should abolish the six months altogether.

13,276. And you could ask that it should be altered at any time?—Yes.

13,277. *Mr. Bell*: If you abolish that, what do you gain by attaching any condition whatever?—If I abolish what?

13,278. The six months' period?—The only object of the six months' period is to keep rates stable over a reasonable period. The trouble about it is really, as I said last time, that the Minister is asked to decide whether a new notice of proposal should be issued; but he is asked to decide in *ex hypothesi* ignorance of whether it should be issued or not, because he does not know whether there is anything in a trade to justify the change. Therefore he has got to do it every time, or refuse it every time; in fact he has done it every time.

13,279. If you make it possible to vary rates at any time, why should you make any conditions that rates may be reduced or advanced according to the cost of living, or anything else?—Do not misunderstand me. I do not say that every time you vary in ordinary circumstances you should not give notice. You have to give notice under the Acts when you vary the rates. The point is you cannot vary the rate at all within six months without the Minister's permission. I only suggest that that section should be withdrawn. In the ordinary course the period should be reduced from two months to one month, and if you had a sliding scale agreement you would get rid of that one month.

13,280. *Sir Arthur Pease*: And you would not have to call the Board?—You would not have to call the Board.

13,281. *Mr. Poulton*: Like some of our voluntary agreements, they could run for certain periods?—Yes. The only additional power they require is to make it conditional on something happening. For instance, they cannot have a sliding scale like the steel trade, moving conditionally on the price of steel.

13,282. *Mr. Pugh*: They could have it on something like that which exists in the railway world, where it is the cost of living which affects it?—Yes. They could if it was straight; but you cannot have a date conditionally on another factor.

13,283. *Mr. Bell*: The people on the Trade Board might use the argument that wages might be increased or decreased according to profits, with all that that would entail?—I do not advocate it necessarily as the way of doing it. All I say is that it may be desirable for them to have the power of doing it if they want to do it. I do not press it; it is only a small point.

13,284. *Mr. Pugh*: You are seeking to give some similar autonomy to Trade Boards to that possessed by similar Boards outside?—Yes. They could then do what they do in the steel trade, which they cannot do now.

(Adjourned for a short time.)

13,285. *Mr. Poulton*: I should like to ask just one question in order to clear up a point which is, I think, of very considerable importance, arising out of what you stated this morning about District Committees or District Boards. The existing Trade Boards have the power, have they not, to fix varying rates?—They can fix varying rates by Districts, if they like.

13,286. Do you not think that that is to be preferred, rather than allowing the Districts to settle them themselves? They have much less experience; they might be a small District and might have an outlook which is rather narrow, whereas if it is settled by the Board, they would have regard to the full circumstances of the case?—I think there is a great deal to be said on both sides. Take the case of the

Grocery Board: they fixed centrally three classes of rates. It was contended in the Districts that they had not had sufficient regard to the local necessities. On the other hand, it is perfectly true that you may get an ill-informed District Committee who may not do it as well as a central body.

13,287. You have not had a great deal of experience of the rates being put into practice, so that you do not know?—That is true. We simply had the opposition as it went along. There is a third alternative which I did not put this morning. I mentioned the Building Trade. In that trade you have District Committees, but what is done by the Committees is simply to decide whether the rates fixed by the central Board are applicable to their District or not. The central Board fixes separate rates, 1s. 10d. to 1s. 4d. and it is for the District Committee to decide which of those rates should apply to their area. That is an intermediate step between the fixing by the central Board and by the local Committee.

13,288. You would agree that the central Board is a very competent body to fix District rates?—Provided, of course, that you have adequate representation. It is difficult, with the limits which you have to assign to the membership of the Board always to get the Districts adequately represented.

13,289. They can choose them?—Yes, but they are not bound by what the Districts say.

13,290. Not necessarily bound?—No.

13,291. *Sir Arthur Pease*: There is no organised body to consult in the Districts?—In some cases, there is not. In some cases, though, you have a District organisation of the Union, but in the most difficult trades of all, you probably have not.

13,292. They can never get a really representative opinion from a District in many cases?—In certain cases, they could not.

13,293. *Chairman*: *A fortiori*, the opinion of the central Board would not be representative?—No. One of the most important points, and one of the most recurrent complaints, is that the rural areas are not properly represented, and our difficulty is to find employers or employed coming from these areas who can be described as really representative.

13,294. You were speaking mostly of distributive trades?—I was.

13,295. If you have a central Board for all distributive trades, you would have to have a very large Board?—The Grocery Trade Board has 78 members.

13,296. It is 83 with the appointed members?—Yes, I think it is 83 with the appointed members.

13,297. *Dame Adelaide Anderson*: Would you say that if you had this concentration of Boards for kindred trades that it would be almost necessary to have District organisation?—Do you mean in the manufacturing trades, or distributive trades?

13,298. Either.—I do not believe you could really concentrate the Boards in the manufacturing trades on a satisfactory basis.

13,299. They must be distinctive, trade by trade?—I think so. I am not maintaining that as defined at present we have reached the acme of perfection. I do not believe, for example, that you could group easily the whole of the clothing trades, although I know it has been suggested. There is so much difference between the tailoring and dressmaking trade and shirts and collars, that you really would not get anything but a series of committees of the main Board, which would correspond to what you have now.

13,300. *Sir Arthur Pease*: That depends upon how far you want to go in fixing rates?—I think that is true, but what I suggested this morning was that if you were to bring several sections of trade together, it would be very difficult to choose one rate for the different sections. You would have to fix different rates for the different sections of the trade. There is a question as between retail bespoke tailoring and dressmaking. There is the same rate of 8d. or 8½d. fixed as a minimum; in one case it applies to the bulk of the workers, and in the other case it applies to a very small minority, because the majority are above that rate, and therefore a casual

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

glance would suggest that you had the same rate, whereas in fact the rate would be a different one.

13,301. *Mr. Pugh*: Do you get committees dealing with what are, to some extent, separate branches of distributive trades? Take, for example, butchers, drapers, and so on. There is considerable similarity in the kind of occupation, but there is distinctiveness in the trades themselves?—Yes.

13,302. Would it be a practical proposition, do you think, to follow the lines adopted in some of the organised trades, and set up committees for the branches of the whole industry which are of a distinctive character?—Do you mean: have a single central body with sub-committees for each branch?

13,303. Yes.—I think that would be possible. I am not quite sure that it would make much practical difference as between some trades. What I suggested this morning was that if you had a district basis for the distributive trades you should have power from the beginning, if necessary, to have a joint committee of all the trades, and that their findings should be decisive either on special points or on general points. What I had in mind, Mr. Chairman, was the case of the big stores. They complain that they may be subject to twenty rates. I suggested to you before that perhaps that was not a real complaint, because after all they put twenty shops together because it pays them to have the twenty shops together, and they have a great advantage, from that point of view, over the small trader.

13,304. *Chairman*: It is a real inconvenience?—It may be, and therefore I suggest that you should have this district basis and joint committee, and treat the stores as a separate entity and fix a rate for the stores if they choose.

13,305. Or they might determine which rate should apply to any particular establishment?—Yes, they might. But the objection in either case might be that a butcher, for instance, who was not in a store might say: I have to pay this rate; why should the store, which has advantages over me, pay a lower rate? That is, if the rate happened to be lower. That is the big point which we have always had to meet when we have suggested to individual distributive trades the possibility of separate treatment for the big stores. They have said: "Not only have the stores a lower rate, but they begin with an advantage."

13,306. It is rather an argument for one minimum in the district?—It looks as if you might meet the case by a separate minimum for all distributive trades.

13,307. *Sir Arthur Pease*: With regard to the minimum rates, there is really a substantial difference between the rates ruling in the various classes of business?—I think there is. It varies as to which is the top rate in various parts of the country. In one case you find that the Drapery trade has a distinct advantage over some of the Perishable Goods trades; and in some cases it is the other way round. I do not know whether we have any figure as to the variation, but they vary, I am told, considerably throughout the country between the various branches of the distributive trades.

13,308. *Chairman*: It was suggested that it might be divided into three categories:—(1) provisions, (2) hardware?—Was it this: what you eat, what you wear, and what you require for living with?

13,309. It was something like that.—Practically it was food, clothing and furniture.

13,310. Yes, I think that was it.—We began by thinking that we might get that, but we found, for example, in the wearing apparel trades, like the Drapery trade, some extraordinary differences between the milliners and men's outfitters. They would not admit that they could be treated together. My own feeling is that those things are capable of being overcome in time.

13,311. *Sir Arthur Pease*: Do you mean as regards the minimum?—Yes, because they maintained that the markets were different and that other things were different, and they could offer different prices to

their people. My own feeling is that it would be difficult, if not impossible, to persuade the whole of the distributive trades to fix one rate immediately; but I do think it would not be impossible, if you started on the basis of separate Boards, to get them gradually to agree to come together and fix a single rate, with power to fix a rate to meet the special case of stores, and so forth.

13,312. *Chairman*: If you are going to have District Boards for the distributive trades, even though you call them District Committees, they would become very numerous, and if you had a separate one for each trade, there would be a good many of them.—On the other hand, they would be much smaller in point of numbers.

13,313. They would not consist of eighty-three members, but the total would be very great. I am rather attracted by your District idea, if we can combine the distributive trades. But if we are going to have a Board for each distributive trade in each District, it rather frightens me.—It was put to you in evidence by both sides, I think, that they would like one Board for the distributive trades. That was qualified by everybody, later on, by saying that you would have to have a separate rate for different branches, which meant different Committees to settle the different rates. They were thinking as far as I can see, of a sort of connecting link with sub-committees, which would be a very big thing indeed. I do not think anyone contemplated a single rate for the whole of the distributive trades, even as a minimum.

13,314. Do you mean that the butcher and the baker and the grocer should sit together and hear the facts relating to each trade and give a decision?—The answer they give to that is that what is particularly appropriate to one trade has no bearing on the other, and it is a waste of time for the butcher to be there when the baker's case is being considered, and so on. For example, take the case of a fishmonger who has very serious competition from street selling of his goods; that particular competition does not exist in the drapery trade, or at any rate, if it does, it is only to a much smaller degree; and they say that that constitutes a substantial difference for that reason, and they want separate treatment. I am not prepared to concede that the case is made out, but I say that it is very strongly felt, and I think they would regard it as a real hardship if we pressed them too hard, into one association.

13,315. *Sir Arthur Pease*: The value of the work done by some trades is considerably more than that in other trades. I should imagine that in the case of butchering, if the rates were all the same, very few people would come into it?—That is perfectly true, I think. The man cutting the meat may save or lose many pounds for his employer, whereas a man simply giving out tinned goods in the grocery trade cannot do very much harm except dropping the tins, I suppose.

13,316. *Mrs. Lyttelton*: Would not a butcher be called a skilled man?—The difficulty would be to discover any butcher, with the exception of the errand boy, who, in a small shop, was not more or less skilled, because in a small butcher's shop they all cut up the meat.

13,317. *Chairman*: Would not those men therefore command a higher wage, even though the minimum was the same?—They might, if they could get it.

13,318. *Mrs. Lyttelton*: If they could not, they would get the minimum?—But that might not pay any regard to the higher ability of the trade to pay a little more wages. I do not want you to think that I am maintaining that it is impossible to fix a rate for the distributive trades, but I think there are very great difficulties in the way.

13,319. *Chairman*: We have had a good deal of evidence about the Chairman and the appointed members, and perhaps you would like to say something on the subject?—As I understand it, there have been various proposals put before you. One was that there should be a single Chairman. The first proposal of all, I think, was that there should be no appointed members; but the grounds on which appointed members are necessary are, I think, fairly simple ones.

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

The Acts provide that you must protect certain classes of workers, and if you have no decisive element on the Board, you may have a deadlock, and the workers will not be protected. If you are to carry out the Acts, you must have some instrument for securing that a rate can be fixed. That, I think, is the primary object of having appointed members. Assuming that that is admitted, the first question is as to the number, whether it should be one or two, or whatever it might be. It has been said that there is very little point in having more than one. But I think the decisive point against that, and what I think is the right provision in the Act, is that where women are largely concerned in the trade, there must be a woman sitting with the Chairman, and as in nearly all trades women are represented, it would mean in most cases either that you would have to have a woman Chairman, or you would have to have three, because you could not have two appointed members. Therefore, it seems to me that if you accept the view that you must have a woman among the appointed members (and I think there is a great deal to be said for it) I think that is conclusive that you have to have more than a single Chairman. Then the next question is whether the appointed members should be independent, as they are now, or whether they should be assessors chosen either from the Board or from the employers and employed jointly. With regard to the question of assessors chosen from the Boards, that brings you back again to the individual Chairman, because if you have a Chairman on the employers' side, and a Chairman on the workers' side assisting the Chairman, I do not think it is fair to expect that they will regard the thing entirely from a neutral point of view, and therefore you would revert again to the position of having a single Chairman. If, on the other hand, the assessors are taken from the outside, there is a good deal to be said for it. But the difficulty is (and I think I should be supported by both the employers and the employed with regard to this) to get really good people to undertake that position, who have the time to give to it. That was a difficulty in the Industrial Court. We finally discovered that if we wanted really good labour people, we were practically compelled to make it a whole-time appointment; and we found that it was a very great tax on the employers' time to be constantly coming to the Court, so much so that in that case also we had to take the same course. We had to appoint one of the employers' representatives and make it a whole-time appointment.

13,320. *Chairman*: Again, I suppose, if assessors were chosen, one from each side, you would get nearly back to the single Chairman?—Not quite.

13,321. Perhaps not quite so fully as if you had a Chairman to decide?—In the early days we had people like Mr. G. M. Booth, the well-known ship-owner, on our Boards, and there is no reason why we should not again have people of that standing, if we can persuade them to give us the time; that is the difficulty. There is no reason at all why we should not have employers and outstanding people who have been associated with labour on the two sides, as ordinary independent appointed members, provided they are not in the trade with which they are associated directly, and we should be very glad indeed, so far as we are concerned, to get them. Although I should be the last person in the world to accept any reflection upon our appointed members, who, I think, have done a very difficult task extremely well, it is very hard for us to get recruits for this work. It is arduous, and it is not very widely praised, and it takes a great deal of time. There is one final difficulty that I see about making the assessors represent a point of view, and that touches a big point of principle. The Chairman does a good deal (and I noticed that you examined some of the Chairmen rather closely about this) by way of conciliation, and the position of a Chairman as a conciliator would be very different if he came into the room with representatives of each side, than if it were otherwise—you would not expect the same freedom.

13,322. *Mr. Pugh*: I suppose you have to regard your members as in some way representing the general public, that is to say, the consumer?—To a limited extent; yes; but, as I said before, it is a little difficult to do that very much. They do not disregard that, but it is not part of their settled function. They have to live with the Board, and if they take an outside view too much, it may make their position very difficult.

13,323. *Chairman*: There is another matter relating to the constitution of the Boards. We had a good deal of evidence about representatives of the Co-operative Societies, and it was said that they have a double point of view, and that to some extent they represent labour as well as the employers. What do you say about side voting as a remedy for that?—With regard to the first point about the Co-operative Societies it has always been urged upon us that the Co-operatives take the Labour point of view, and that they have working class associations and are likely to favour that side. On the other hand, they are employers on a considerable scale, and if we leave them out, we shall be leaving out a considerable employing interest. Therefore, as we see no reason which would justify omitting them from the Employers' side, we have to consider the question of side voting. Our view has been very strongly against side voting, on the ground that the whole point of possessing a vote is to be able to use it to persuade your side, if they differ from you, to vote with you, or to change their view if necessary. But if you simply have side voting, the minority may have a perfectly definite view, but as they cannot vote, they have very little influence with the majority. If they can vote, although they are in a minority, they can effect something with the majority.

13,324. How are you to meet the point about the co-operative members?—I should be very loth to express an opinion, and I speak as an outsider upon this question. But I am bound to say that the co-operatives have not behaved, in my view, in a manner unlike other employers. I think they are more conscious of the workmen's difficulties. I think their own troubles with their own workmen at times shows that they are conscious of the workmen's point of view.

13,325. *Mr. Pugh*: Are they not in precisely the same position as other people, that their workers are organised in Trade Unions and they have to adopt the same machinery of negotiations for settlement, and, indeed, they very often have considerably more difficulty than a private employer? That being so, there is no particular reason why they should favour the workmen on the Board?—I do not think there is.

13,326. *Mrs. Lyttelton*: They do not have quite the same limitations as ordinary employers?—In what way do you mean?

13,327. They are not taxed in the same way, are they?—I believe there is a difference in that way.

13,328. And they distribute their profits, so that they have a different point of view?—To some extent, yes; but when it comes to the point, they have to live as business people and do as other people do. There are certain differences, but they really are not in business for their health!

13,329. *Mr. Poulton*: They have to meet the position competitively?—Yes they have, and I am not sure, honestly, that there is a very good case against them. I do not see why they should not have the same position as the ordinary employer.

13,330. *Sir Arthur Pease*: The employers' representatives are not appointed by the employers?—They are nominated by them.

13,331. They are appointed by the Government or the Ministry of Labour. That does add importance to the question of one man being able to turn over the whole thing?—It is not quite that, although it is, practically. The position really is that we invite the employers to nominate the people they want, and we decide how many should represent each interest; but when they nominate, we never turn down a

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

nomination unless they nominate more than we require or they nominate a man for the wrong district.

13,332. There is nobody to nominate at all in some districts?—In the case of the unorganised trades, we have to find the men for ourselves, it is true.

13,333. They might be organised in three-fourths of the country, and unorganised in the other part, and you might put a man on from the Ministry who represented nobody definitely?—You might go and fetch a large employer from an unorganised district who was not a member of any Federation, and just put him on because he was the biggest man you could find.

13,334. He might control the whole proceedings of the Trade Board?—On the whole, of course it is not likely that his point of view would be different. That is not the same point as the co-operative point, because in that case he is definitely an employer and presumably with the same interests as the others, although not organised, whereas in the co-operative case, it is suggested that they have different interests.

13,335. *Chairman*: You do provide for side voting in some cases, do you not?—We do that in one of the oldest Boards, and we only agreed, again very reluctantly, when the Boards were re-established, because they put very great pressure upon us to do so. But if you have a Board with middlemen on it as well as the main employer, as you have in some of the tailoring trades, if the main employer is the dominating feature, all that the middleman can do is to impress his view on the employers' side. But he has not got the effective weapon of the vote to enable him to see that the majority listen to him. If you adopted the principle in order to meet the co-operative point, you would do damage in some cases. I think we should enormously increase our difficulties in getting people to agree to the establishment of Boards if we could not assure the minority coming on to the Boards that they would have the absolute right of voting. I think we should then find it very difficult to persuade people to come on to the Boards.

13,336. *Sir Arthur Pease*: Could there not be a half-way house—for example, that a majority of four-fifths controlled the side?—You can make any regulations of that kind which you like. Side voting is settled by regulations and not by the Acts. One proposal was that you could have side voting wherever it was unanimously agreed upon by the Board that you should have it. If unanimous application is made to the Minister to have side voting, he should adopt it—as long as it is really unanimous, there is not so much difficulty about it.

13,337. *Mr. Layton*: Would you say that you endeavour to follow the rule of giving representation strictly in proportion either to output or to the employment afforded by an organisation?—I do not think I should pin myself down to that. We have regard to a number of things. We look at the relative values of the Associations, both on the amount of capital that they represent and the number of workpeople that they employ, and generally with regard to their importance and their established value. But we do not go precisely into statistics.

13,338. I was only wondering whether in fact you got approximately near that result, or would it be true to say that the organised section of trade gets substantially more than its proportion?—Oh, yes, it does, always.

13,339. *Sir Arthur Pease*: In the organised trades, where they are called Conciliation Boards, it is practically always side voting. The influence used with regard to giving way on a point or sticking to a point really takes place out of the room?—It is all voluntary, and if the minority are really dissatisfied they can withdraw. They can say: "This is not our agreement, and we are going out of this business altogether." That cannot be done on a Trade Board.

13,340. That is not what actually happens. Supposing that there is more or less of a deadlock, then if a substantial minority say: "We are not

agreed, we shall stick to it to the bitter end," then they put that view forward at a private meeting and it has an effect upon the others, and some compromise is effected. That is what really happens.

With great deference, I think that is probably what happens in the best organised trades. But we have had instances in some of the J.I.C. Trades where the minority has been overruled and where they have broken away after the agreement because they have been overruled.

13,341. *Mr. Layton*: Is that not an important distinction between Trade Board practice generally and wage regulation elsewhere; that in fact in these other trades, if there is an obstinate minority, possibly justified by circumstances, in fact what happens is that the organisation on that side gives way for fear of breaking to pieces—it cannot overrule its members, whereas on the Trade Board the matter is simply carried into the Court and those people are out-voted?—It would not be true to say that it always happens on Trade Boards, but it can happen.

13,342. It is an important distinction?—The majority can forcibly overrule the minority on either side if they wish, that is to say they could do it if they had side voting. With the possibility of individual voting, the boot is rather on the other foot. The minority can say: "If we vote with the employers"—that is if they are Labour people—or "if we vote with Labour"—that is if they are employers—"we shall turn the scale against you," and that is a very potent factor in inducing agreement.

13,343. *Mr. Pugh*: I should think it has another value in the recognition of joint interests in the trade, since you have employers and workmen voting together. There is value in that as against the practice of voting separately?—I think so. We have had employers voting with the workers, and against their friends, and occasionally we have had it the other way round.

13,344. *Sir Arthur Pease*: Which is the fact on the majority of Trade Boards now—which practice is in force?—Individual voting. There are only two Boards which have side voting.

13,345. *Chairman*: There is no general set of regulations at all?—No. I am reminded that there is a small point that I ought to bring forward to the notice of the Committee, and that is that if there are not equal numbers present on the two sides, the Chairman can ask the two sides to equalise themselves. Up to the present, or until about a month ago, there had never been a refusal, but now there have been two refusals in two immediately successive meetings of different Boards, which has meant that they could not get on with their business, and we therefore suggest for your consideration that some regulation should be made which would render equalisation compulsory.

13,346. *Mr. Poulton*: Do you mean that they would not agree?—They would not agree.

13,347. *Chairman*: Who is to go?—What happens is that, supposing that there are fourteen on the employers' side and twelve on the workers' side, the Chairman says that two from the employers' side should go.

13,348. What machinery would be proposed for fixing which two should go?—That is the difficulty.

Mr. Poulton: It could be taken on a vote. You must secure equal voting.

13,349. *Chairman*: Supposing some of the employers go the other way?—That makes a difficulty. But as a matter of fact we have been thinking about this matter, and we have a formula which I should suggest, if the Committee are considering the matter.

13,350. Have you got it with you?—No, but we can send it to you.

13,351. There is something in the statute which prevents them from going on under those circumstances?—It is in the Regulations. If the Chairman of a Trade Board has asked for equalisation, and it has been refused, he can adjourn. It may happen that if it is suddenly refused, you may hold up the rates indefinitely.

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

13,352. *Sir Arthur Pease*: If a rate is in operation and no new rate is fixed, does that rate go on?—Yes, it goes on until a new rate is fixed, but in some cases there is a provision that the rate comes to an end at a certain date. Otherwise it goes on.

13,353. There is generally such a provision, is there not?—Not necessarily.

13,354. The rate goes on indefinitely until?—Until it is altered, unless there is a special provision to get rid of it, or unless it is fixed for six months. In that case the rate disappears in six months.

13,355. *Mr. Pugh*: Does that mean that by a process of obstruction a rate would never be altered?—What would probably happen would be that the other side would try to turn up in sufficient numbers. We have had two bad cases in the last few weeks in which the rates have been held up by the refusal to equalise, but I am told that they are both put right now, because at the next meeting the two sides were equal in number.

13,356. *Sir Arthur Pease*: Would you say that it was purely obstructive tactics?—I should not like to stigmatised it, but it looked like it. I am reminded that it cost about £500.

13,357. Is that the cost of the meeting?—No, the cost of two meetings of two Boards.

13,358. *Mr. Pugh*: Has not the Minister the power to issue regulations to deal with a case of that kind?—He has powers, but it is not very easy to legislate upon, and it would support him, if he had to make a regulation, if the committee were in favour of his making it. There is only one other point which you may wish me to deal with, and that is the question of the appointment of the Chairman. It has been suggested, I think, that his appointment should be submitted to the Board. I think we have to claim that the Minister shall have absolutely unfettered right to choose the Chairman, and we think above all that it is advantageous in the interests of the Chairmen of the Boards themselves, because it may happen that a good Chairman has given offence to one side or another, and he may be challenged. It is really like the right of recall of judges, if you press it too far.

13,359. *Chairman*: Now may we pass to the question of administrative methods?—Yes. I do not think I need delay you very long about that. The point really I think that one ought to get into one's mind is that it is very difficult to administer the Trade Boards. It is not like any other piece of Government administration, because you are in fact in relation with a large number of autonomous bodies, and the problem therefore is the adjustment between the two sets of powers. Numerous proposals for making the position simpler and easier have been made, but it is very difficult to see how anything will really make the position perfect. As long as the Minister has the power and duty to confirm (and I have suggested earlier to-day that he should keep that power) there will remain, and ought to remain, occasional grounds for disagreement between the Minister and the Boards. If the power is never used to upset the Boards, there is no reason why the Minister should possess it. It will inevitably lead to disagreement, but I suggest that a good deal of the scope troubles could be got out of the way if you had some authority, such as an umpire or a Minister, with actual powers to decide. Then you come to the less important, but still quite important question, of the relations between the Office of Trade Boards, as it is called, and Montagu House, as it is called. If I may take one point to illustrate my general proposition, a good deal has been said about the Inspectorate, and it has been suggested that you would improve the position of administration very much if you housed the Inspectorate at the Office of Trade Boards, or if you put them under the control of the Secretary of the Boards—one of those alternatives. I think honestly that a good deal of that really arises from confusion of thought. There is no doubt that since the Armistice and during the war inspection dwindled rapidly, partly because we lost some of our

best inspectors and partly because it was not regarded as of primary importance. When the Armistice came, we were left very short-handed indeed, and the complaints which were made against inspection were just as strong when the inspectors were at Chancery Lane after the Armistice as they were after they were transferred here. In fact, my suggestion is that the complaint is not that the inspectors were in the wrong place, but that there were rather too few of them, and that we had not got sufficiently experienced inspectors. It has been suggested, I know, that the liaison in the matter of inspection is not adequate. I have taken the trouble to get out a list of cases, and it is considerable. I think our inspectors indicated to you that they are not attached to the Boards. The question is this: the Boards want to know what the inspectors are getting in the way of information in order to decide whether they have to alter the rates. We must know what the inspectors are learning in order to know if we must confirm the rates. We must have knowledge: we must both have it, and it is simply a toss-up whether it is better to have them in one place or in another. The ideal arrangement, if geography and accommodation permitted it, would be to have the whole under one roof, and that is what I should most like to see, the Office of Trade Boards and the administrative Department under one roof, and then I think the liaison trouble would disappear.

13,360. Who is at the Old Bailey?—The gentleman there is in a slightly anomalous position. He is the Secretary of Trade Boards, and he is their servant to that extent. He is also an officer of our Department, and he is paid by the Government. I do not see how that difficulty can ever be got rid of except by personal contact and goodwill. Personally I think that a good deal of the feeling which has been generated (and one cannot disguise it) has been due to the sudden operation of a large number of new Boards in unexplored territory, and a large number of new problems which had to be encountered. I think, however, that the feeling has rather tended to diminish as the Boards and the administration become more accustomed to each other, and I think it is really narrowing itself down now to the very small point of actual contact, and it is no longer a big administrative question. I strongly suggest that it is not a case for muddling authority by putting executive work under legislative bodies.

13,361. *Mr. Pugh*: The Committee of which you were Chairman issued its report in March of last year, and it was suggested that the Chief Inspector should be stationed at the same office as the Secretary of Trade Boards. Is your view, as expressed now, in agreement with that?—Since that Committee was appointed, we have adopted that recommendation. We have appointed a Chief Inspector, and we thought of sending him down to the Office of Trade Boards. The first thing that deterred us was that we were very much impressed by the accommodation available, and if the inspectors had been asked to vote upon it I think there is no doubt which way they would have voted. That is one point. If you ask whether it would be seriously wrong to put them at the Office of Trade Boards, the answer is that I do not think it would. That is why I signed the Report. You will notice that the Report suggests that the Inspectors should remain entirely under the direction of the Minister, and therefore it would be the same body of officers under the same discipline and orders, but in one building rather than in another. My view is that it would be much better than shifting the Inspectors down to the Office of Trade Boards to bring the Office of Trade Boards to where the Inspectors and the administration are situated.

13,362. *Mrs. Lyttelton*: You would like to see them under one roof?—I would. The objection has been that it might be suggested that the Ministry was interfering in some way with the autonomy of the Boards. Personally, I do not think that is a real point.

13,363. *Mr. Pugh*: I understood that the difficulty was that the Boards could not get to know what was

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

the view of an Inspector with regard to a case which he might have inquired into; that is to say, they could not get information as to the results of the work of the Inspector, and they were therefore at a disadvantage. It was assumed, I think, that this was because of lack of co-ordination at headquarters, which would be got over if the inspectorate were stationed at the Trade Board offices?—There is a little confusion there, I think. At no time were the Boards furnished with the information as to the individual work of Inspectors, and you will understand why that is. An Inspector goes to make a privileged inquiry, and that inquiry may reveal things which it is perhaps unfair at that stage to communicate to anyone except the Government Department on whose behalf the enquiry is made. But it is the practice to let them have a summary of the work of the Inspectors, which is what they need. They must know how the rates are being observed, and whether they are causing hardship; and the complaint which I have heard is that they do not get enough of that information. The answer to that complaint is that I have a list of the occasions when we have given information, and it is pretty substantial. We do our best, and shall do so, to give full information. One of the reasons why they have not had it is that we have not had enough Inspectors to do the ordinary work of inspection, and we certainly have not had time to prepare reports. The main complaint about inspection, I am sure, has been due to the fact that we have had an inadequate staff.

13,364. *Sir Arthur Pease*: How many Inspectors do you think you would want to do the work?—You have to decide what basis you are to aim at. For complete inspection—100 per cent. inspection—I dare not say what you would need. But for a reasonably adequate inspection, with a fully trained staff who can do a full day's work, and with the removal of certain difficulties which are in their way at the moment, I should like to ask for fifty, but I do not think I dare ask for fifty in the present state of public finance. I should like forty.

13,365. I suppose that is to carry out a 50 per cent. inspection?—Nothing like 50 per cent.

13,366. *Mr. Poulton*: Do you mean an additional forty?—No, not additional.

13,367. What is your staff now?—Thirty-six.

13,368. *Sir Arthur Pease*: The complaints we have had with regard to inspection from both sides are that the Act is not being carried out at all and is in many districts a dead letter, and it must either be abolished or carried out. The impression left on my mind is that to carry it out properly, you do not want an increase of 20 per cent., but an increase of 200 per cent. or 300 per cent.?—If I may say so, I think that argument is advanced by people who want you to draw the inference that therefore the Act ought to be abolished.

13,369. No, they are strong supporters of the Acts.—There is no doubt that there may be evasion, and is evasion; but I proceed on the basis that, on the whole, the British public, when they have a thing imposed upon them by law, desire to do it rather than otherwise, and we find from inspection that that is so, and that the majority of employers mean to carry out their obligations. When we get these charges that the Acts are being evaded in a district (and I agree that we get them from supporters of the Acts as well as from opponents, we find, when we enquire into it, that they are not supported in practice. We had accusations of evasion in the Laundry Trade, and we could not establish them. There was evasion, but it was not wholesale.

13,370. We had evidence that there was no routine inspection going on at all, and it was only the complaints that were dealt with?—There is very little routine inspection; but with a body of forty inspectors, I think, when we have settled down into the trades (and I will explain what I mean by that in a moment), we could both keep up with the complaints which require inspection, and also do a limited amount of routine inspection when special

occasion arose. What I mean when I say "when the trades have settled down" is this: the difficulty of inspection is obviously far greater in a new trade than in a trade which has got used to the Acts. For instance, in the Chair Trade you do not require much inspection at all. In a new trade, you start all the inspectors explaining matters. After a time it is found, as it was under the Health Insurance Acts, that you do not require to go round to everyone to see if they are stamping the cards or paying the rates, because you know that generally speaking they will do it. Therefore complaints are a good test of whether there is evasion, and apart from that you could have what are called "drives"; that is to say, you put five or six inspectors on to a district to go through it; and it is my belief that with a really efficient nucleus of forty inspectors, you will get, not complete observance of the Acts, but, what with the fact that the trades unions are watching to see that the rates are paid, and what with the fact that individuals know what their rights are, I think you will get a pretty considerable observance of the Acts; and what I say is that when we are told that there is no observance of the Acts and that they are a dead letter, we have found, whenever we have challenged it, that it does not hold water. I am prepared to say that except in one or two exceptional districts, I should be very surprised to find wholesale evasion.

13,371. But giving full weight to all those reasons, if the Act is extended to give a great many more classifications and piece-rates, that would add very greatly to the work of the inspectors, because in those cases it is often difficult for the employer to know whether he is carrying out the Acts or not?—It is true that if you have elaborate bases, the work of inspection is more difficult. Inspection of piece-work basis time-rates is much more difficult than inspection of plain time-rates, although I am informed that the inspection of the plain time-rate has very considerable difficulties also. But my previous figure of forty must be qualified by this, that if we have many more trades we shall have to increase our inspectors, and if the work cast on the inspectors becomes very difficult, that also implies a necessity for more inspectors, but my forty is designed to give a reasonable amount of inspection, which, in my view, would result in satisfactory compliance with the Acts in the trades which are now covered by the Boards, on the present basis of full powers in respect of piece-rates and time-rates.

13,372. Then any further trades which come under Trade Boards would mean a proportionate increase in the number of Inspectors?—It would mean a certain increase; if you had twice as many trades you would have to have more Inspectors, but not twice as many Inspectors.

13,373. *Mr. Poulton*: You suggest in your Report two Inspectors for every ten Boards, or up to maximum of fifty?—That is very nearly what I am suggesting to you, because you will notice that there are some District Inspectors who make up the number. I am speaking of English Boards only, because we have no responsibility for the Irish Boards.

13,374. *Dame Adelaide Anderson*: What proportion does that bear to the number at the time of Mr. Aves?—He had a maximum of twelve Inspectors for thirteen Boards.

13,375. This proposal is forty Inspectors for what number of Boards?—Really for forty-four.

13,376. It is a much smaller proportion?—The proportion is very much the same. It is really smaller, because the numbers covered are much larger.

13,377. I was thinking of it rather from the point of view of the number of work-places?—Yes.

13,378. Then, harking back a little, to what you said as regards the accessibility of the Inspectorate to the Boards, the mere fact that the Chairman of the Boards directed the work of the Inspectorate, made a very considerable difference?—Yes. Of course, he had a double capacity; he was there as Chairman, and he was there as an officer of the Board of Trade.

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

13,379. He did, in fact, see the reports of the Inspectors in detail?—He did.

13,380. They were confidential to him, but still, the information filtered through him?—Yes; that was an expedient to give Mr. Aves enough to do. It was hardly possible to continue when there were 40 Boards.

13,381. I quite see that, but it was only directed to bringing out what a much higher proportion you would be likely to want in the altered circumstances?—I should not think so. One of the things which we have now, which you had not then, is district inspection. It is a saving of time, or an increase of your man-power, or woman-power, as the case may be. In those days, it was all central, but now, we have been using our Inspectors locally, and they take their own area. The arrangement which Mr. Pugh has recommended, of setting up a system like that of the Home Office, of a District Inspector, with a small body of Inspectors and two or three superintending Inspectors at Headquarters—

13,382. Or in divisions?—Yes. In each Division a Superintendent Inspector, with, I suppose, a staff, and at Headquarters the Chief Inspector with two or three people to help him or her.

13,383. And he or she would probably have some floating staff to do special enquiries to help the Boards?—Yes. Another difficulty about the centralisation of the inspectorate under the Boards, is that a number of the Boards do not meet in London at all; their headquarters may be at either Manchester or Birmingham, and then there are all the Scottish Boards, which meet in Edinburgh or elsewhere.

13,384. That emphasises the importance of divisional organisation?—Yes; very strongly. But it is very difficult to control divisional organisation, inasmuch as you have scope, executive and other responsibility.

13,385. Yes; and some power to keep the inspectorate wholly independent?—That is right.

13,386. *Sir Arthur Pease*: We have been informed that an inspector requires very special knowledge in some trades, and that it is very dangerous to send anybody who is not thoroughly up to his work, on inspection. Would it not be possible, where there is a routine inspection which is going to take two or three days, to help the inspector by sending somebody with him, say an ordinary clerk, to do calculations of figures, and so on?—It might be. What might have been possible is, I think, rather a different thing from that. Some of the work of inspection is extraordinarily difficult, but some things, like looking to see whether a notice is posted up or not, are quite simple.

13,387. I was thinking of the work of calculating out rates of pay, which any ordinary clerk with some knowledge of figures could do?—It might save a little.

13,388. It would save a considerable amount if it were done in that way rather than having it done by a man at a salary of several hundred pounds a year?—Yes; you might save a little, but it would mean having to have a considerable staff of people of that kind to do that work; I do not know whether it would be cheaper in the long run. What would be cheaper would be if you could make use of a sort of composite inspector to do simple things like seeing that notices were put up, seeing that insurance cards were stamped, and perfectly ordinary Home Office things of that kind. But wherever the work is really technical, I do not think you could save much by interposing additional people.

13,389. I gathered that the thing which took the greatest amount of time was checking the piece-rates, to see if they were in accordance with the decisions of the Trade Boards?—Yes; I think that is true. Of course, the mere arithmetic must occupy a good deal of time, but it is the knowledge which enables the inspector to decide whether a machine can, or cannot, produce the necessary amount, which is the vital thing.

13,390. A big pay-bill is a very complicated thing, and if it has to be gone through for a considerable

period, it is a very heavy job?—There is no objection whatever to letting the inspector be accompanied by a calculator. Here at headquarters we have people engaged on calculations all the time, but I do not know whether it would be any cheaper to send them round with the inspectors. Of course, as you suggested earlier on, it depends upon what it is that the inspector has to find out.

13,391. I was not meaning that he should go by himself?—No.

13,392. *Chairman*: Is the next point that of enforcement?—There is a small point on the question of enforcement, and it is this: Speaking generally, of course, prosecution has always resided in the Minister, and it has never been out of his hands at all. The Acts provide that the Trade Boards can prosecute, but they never have done, and I think only in two or three cases have they asked to do so. In any case, they would have to pay for the prosecution unless they got the permission of the Minister to undertake it, and therefore the matter has been in his hands. I think it is almost inevitable that inspection, enforcement and prosecution must be dealt with in the same place. I think you will appreciate that in deciding on enforcement or prosecution, there are a great number of points to be considered, as to whether you will proceed or not. It is not simply a question of evasion, but it may be much more than that.

13,393. *Mr. Poulton*: The division of the staff between the Old Bailey and here, is not because there is any desire to keep information from or to retard the Boards?—Not a bit. I should much prefer to see them all in one place.

13,394. Pending that arrangement, the Department is prepared to give them all the assistance possible?

—Yes; but I think the Boards have a legitimate complaint that they have not had as much as we should like to give them. That has been due to the fact that we have not been able to get it out in time.

13,395. *Mr. Pugh*: Have you any views as to the form of Court that you should go to; whether you should go to a Magistrate's Court, as at present, or whether you should set up some Tribunal, such as was established during the war, to deal with it?—I have a tenderness, perhaps naturally, for the Munitions Tribunals, which I claim—possibly quite improperly—to have invented. Personally, I have a feeling that they ought to go on, but I think the big point against them is that you could not revive them now because of the expense. I do not think it is practical politics to talk of starting Munitions Tribunals again now, although, mind you, there are great advantages in the system. It was very cheap, and very quick, and the workman could go himself, or his representative could go, and, if there were any questions of principle which the Court could not decide, those questions were referred to the Committee on Production. But I think the great answer to it is that nobody would look at it at the present moment, on the ground of expense.

13,396. *Sir Arthur Pease*: There is another complaint that we have had, and that is that the Trade Boards would like legal assistance in drawing up their decisions, at an earlier stage than they now receive it. It was said that that would save a good deal of trouble afterwards?—I think that is an echo of trouble, rather than an existing trouble. It is true that there were two or three cases where we let the matter go as far as fixing, before we pointed out that there was a legal objection; but now, I think, there is an arrangement in existence by which legal points are discussed at the proposal stage, so that that difficulty is obviated, and in so far as the Boards want to have direct access to the Solicitor of the Ministry of Labour, they can always have that on request.

13,397. I think that last point is the real point. They want to have access to the legal department, so that they may get their decisions into the best form. —They can have that. There is one thing that the Solicitor's Department does not do, and I think can

22 February, 1922.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

hardly be asked to do, and that is to give advice on hypothetical questions; they must have a specific thing put to them. What so often happens in the proposal stage, is that a Board wants to put this sort of question: "Supposing we did this, would it be legal, and if we did that, would that be legal?" The sort of question that the Solicitor wants is: "There are the facts. Is that legal?" He does not like hypothetical cases.

13,398. Your Committee last March recommended legal facilities?—Yes; and I think they have been established since. There have been a number of cases where the Boards have seen the Solicitor since.

13,399. *Chairman*: Then we have almost gone through the recommendations of your Report?—Yes.

13,400. That is, except as to the question of the Advisory Committee?—Yes; I do not in the least withdraw from that. I signed the Report, and I do not think there is any reason for saying that an Advisory Committee would not be useful. But I am bound to put it to you that the trouble is, when you appoint an Advisory Committee, that there is often a great deal of work in the early days, and none later on, and people come to think that it is rather a farce, or that it is a thing put up in order to distract attention from the wickednesses of the Department, or something like that. I think that we could get very valuable help from it from time to time, but what you must be very careful to do is to see that it does not interfere with the powers of the Boards. No Board would stand having its rates criticised by an Advisory Committee, nor would they be prepared that an Advisory Committee should settle questions of scope. The sort of thing that the Committee would be quite ready to discuss, no doubt, would be the question of housing the whole thing under one roof, and troubles arising between the Ministry as a whole and the Boards as a whole. I have no objection to the Committee, but I do not want there to be a false idea as to what it could do.

13,401. *Mr. Pugh*: Might we take the terms of your report: "A Standing Advisory Committee, properly representative of the Trade Boards, to advise the Minister on the views of the Boards, and of the general Trade Boards position."—I have no objection to a Committee of that sort.

13,402. *Chairman*: You think it should not consider rates?—I could not consider individual cases of scope or rates, nor was it intended, in that Report, that it should do so.

13,403. So I understand. You think the rate should not be referred even for advice?—I do not think so; I think the advisory body should be kept quite clear of the Trade Boards. I think that must be done. If you are to get a re-hearing of a Trade Board case you must go to a completely outside body or person. If you do not do that you will either have representatives of the Board in question on your Council, which would be regarded, possibly, as having it "weighted," or, if they are not there, they would say: "Why on earth are all the other Trade Boards deciding our case for us?" You must go right away from both sides.

13,404. There are really two ideas. There is this idea of the Advisory Committee representing the Trade Boards, and there is the idea of a strong Central Committee appointed by the Minister, who might advise him on important questions.—I do not quite know what the second would be, unless it were something to take the place of the Administrative Department.

13,405. It is the kind of thing referred to by Professor Hobhouse and others. He called it a Central Body.—It would really mean, I think, that before the Principal Assistant Secretaries or the Assistant Secretaries responsible to the Minister could give advice they would have to ask what advice they should give.

13,406. I think the idea was that possibly the Minister, after hearing what his official advisers had to say, might like to have the matter considered by the Committee, and he would send it to them.—Possibly it is quite red-tape official dislike on my

part, but I think it should be kept clear. If you want to have a Tribunal, or an independent authority to review the action of the Boards, or to advise the Minister, then I think you should have that. If you want an Advisory Committee, strictly advisory, to be consulted by the Minister on general matters of policy, as to whether he should go forward with the policy of setting up Boards, or whether the time was not ripe for it, then by all means have a Committee for that purpose.

13,407. *Mr. Pugh*: You take the same view as Professor Baillie, I think, that what he termed a "super-board" would be inadvisable if it would interfere in any way with the Boards themselves?—This proposition which the Chairman has put forward, is different. It is that before the Minister settles a question referred to him, he should ask the advice of certain people. I suggest that if the Minister cannot accept the advice of the people who are paid by the State to give it to him, he had better get other people in their place whose advice he can accept, but I do not think they ought to be mixed up.

13,408. *Chairman*: I think there is such a Committee at the Ministry of Health, and there may be others.—I have a perfect parallel to this Committee that my Report suggested, in the Ministry of Munitions. We had a very effective Committee of employers and employed, whom the Minister used to consult from time to time on questions of policy, and it was very valuable in the troubled times of the war. I think a similar Committee would be quite possible, and worth having now. But to have a Committee to which you would have to put, from time to time, the points which arose from day to day, I think would be very embarrassing to the Minister.

13,409. I do not understand that distinction. It was a Committee which he might consult on points of policy.—It was on general lines. If you had a general question which you wanted decided, not a question arising out of ordinary administration, but on the general policy to be adopted by the Trade Boards, as a whole, you might have a talk with the general Committee. But the idea of having a small *ad hoc* body, whom you would consult on questions of rates and questions of scope, and as to the setting up of new Boards or cancelling old Boards, I should have thought that that was not compatible with ordinary civil service methods.

13,410. *Mr. Pugh*: You do not think that a Committee such as was proposed in your Report of last year, would really serve any useful purpose?—There was at one time a good deal of bad feeling about; people did not know each other, and had not talked the thing out face to face, and I thought that if we had a Committee of that kind, and people got to know each other, a good deal of the bad feeling would disappear. I may be wrong in thinking that the feeling is better now, but I do think it is, and from that point of view, I think that the Committee is not as necessary now, as it was then.

13,411. *Chairman*: Is there anything else in the recommendations of that Report of which you think we ought to take notice?—There was one point, and that was the question of where the Assistant Secretary was to sit. I am afraid you may think that that is a trifling issue, but it did really arise, and it was hoped that you would have an Assistant Secretary at the office of Trade Boards, who would in fact control inspection and scope, and be in much closer touch with the Trade Boards than any officer of the Department is at the present moment. If you take scope away altogether, as has been suggested, and make it an outside matter for judicial decision, and if you can get the office nearer to Whitehall, or bring Whitehall nearer to the office, I do not think it arises any longer.

13,412. *Mrs. Lyttelton*: It is really the same point as their being in the same building?—I think it is, really.

13,413. *Sir Arthur Pease*: You really attach great importance to the Trade Board offices being either under the same roof, or as near as possible, to the Ministry of Labour?—I do, indeed.

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

13,414. And may I put it as strongly as this: That unless that is done the thing would not work satisfactorily?—I cannot say that; but I do say that if it is not done, you do have misunderstandings due to lack of personal contact. It is impossible to over-estimate the importance of personal contact. For example, if I write a letter to a Trade Board, in cold official language, they may say: "What on earth is this fellow writing about?" and it is the beginning of a quarrel, but if I go down and see them, and talk to them, or send someone to see them, then in time they begin to say: "After all, he is trying," and it makes all the difference.

Sir Arthur Pease: I think you have put it even a little stronger than I did.

13,415. *Dame Adelaide Anderson*: What about provincial Boards?—In Scotland, I think we should have to contemplate some de-centralisation, if the Scottish Boards really grow. I did not want to trouble the Committee with this, but I think if we had a large number of Scottish Boards, we should have to station some officer there.

13,416. What about Manchester, Birmingham, and Leeds?—We have nothing in Leeds, but as to Birmingham and Manchester, we should have to do the best we could.

13,417. As a matter of fact, how far away is the Old Bailey, in point of time?—It is far enough. It is as far, proportionately, as England is from Ireland.

13,418. What about a liaison officer going to and fro?—At present, Mr. Nicholson goes to the office of Trade Boards, and has a meeting there with the officers concerned. But in addition to that, you ought to be at the Boards as much as possible when the Ministry's views are to be put, and we are trying to arrange that with such staff as is being left with us.

13,419. And the Inspectorate, as far as can be done without interrupting, may work as closely in touch as possible?—Yes; for instance, the Chief Inspector has been down three or four times to Boards in the last months. He went to two successive meetings of the Rope, Twine and Net Board, and gave them some facts. I have been down to a number of Boards myself.

13,420. *Chairman*: There are one or two minor points, such as overlapping rates in the same establishment. You refer to that in connection with District Boards, but how would you deal with it in London?—Take, for example, the Rope, Twine and Net Board, the Flax Board and the Jute Board; you may get a case where those three overlap in the same establishment. No power on earth can prevent that; but it is a hardship, and I suggest for consideration whether some authority could not be given the right to decide which of those three rates ought to apply to the whole establishment. It could be the highest, or the middle, or the lowest, according to the work being done.

13,421. What authority would you suggest?—If you thought an umpire was the right authority for scope, he might be the right authority to decide this point. Otherwise, it might be an Industrial Court.

13,422. It might be the Minister?—Yes; but I think some authority should have the right to say: "This is the rate of pay, and you have no need to pay all three."

13,423. With regard to middle-women, we had a complaint about middle-women in the Lace Trade?—Supposing a case has been made out, it is very odd that employers should be covered by an Act which was designed to cover employees; but if that small technical point could be got over, we are entirely in favour of protecting them.

13,424. *Sir Arthur Pease*: How would you protect them?—We should have to make a special provision, by power of the Minister, to cover any district where it arose. You could not limit it to Nottingham, because it exists in Birmingham as well. There would have to be power to the Minister to make a rate applicable in special cases where work was being

taken on commission. You would have to be careful to avoid covering wool combers, and so on.

13,425. *Chairman*: Why should it be the Minister, and not the Trade Board?—The Trade Board would do it.

13,426. *Sir Arthur Pease*: I do not see how you are going to cover that sort of person without covering very large people who let out contracts?—Do you mean on commission?

13,427. Yes.—I think you would have to be very careful of your basis.

13,428. *Mrs. Lyttelton*: They are sometimes one, and sometimes the other?—Yes; but I think you could find words which would clearly keep out the big people.

13,429. *Dame Adelaide Anderson*: Do you know the difficulties which came from the case of England v. Barnes, under the Truck Act?—I am afraid I do not.

13,430. Do you remember the case where an out-worker was found not to be protected by the Truck Act?—I am sorry; I do not.

13,431. It was found that the great difficulty was the definition.—I am sure the definition will be difficult, but we have prepared words which we think might meet it.

13,432. Unless the worker contracted personally to do the work, and then she was not protected. I asked you, because it showed the great defect of an Act which was intended to cover these people, and was found not to cover them?—Quite. I am sure it is full of difficulties, but it is suggested to me that that particular point has been considered, and we think, even so, we could find a form of words which would meet it.

13,433. *Chairman*: Then we have been told about some institutions which carry on certain trades, such as the Laundry trade, and so on, which are free from the Trade Boards?—You are in a very difficult situation there, of course. It was represented as being far worse in Ireland, where you had all the convent laundries; there are some in the Liverpool area, too. It is true they do laundry work, but it is done by the inmates, who are getting board and lodging. They are doing it as a means of occupying the persons who do it, and it is not the thing that you have in mind.

13,434. It is said that they do work for people outside?—They do, but that is how that type of institution lives. It makes a small profit, in addition to the subscriptions, from the work which it is doing. But we have not been satisfied and are not satisfied, that in this country there is really a strong case. We were much impressed by the evidence from Ireland.

13,435. *Mr. Poulton*: As regards the volume of trade, is there much?—No; not much. There is more laundry work than anything else. Then there are other public institutions, such as prisons, for example, which are making a small amount of money by what they sell. It would be very difficult to cover institutions.

13,436. *Sir Arthur Pease*: There are Waifs and Strays Societies, too?—The whole point is whether they are carrying it on by way of a trade. Any institution doing work by way of trade, comes in. The system must be on a trade basis and not merely on an institutional basis. For instance, the Salvation Army might be covered, if they engaged their workers regularly with a view to earning profits.

13,437. Supposing they got one or two people in from outside?—They would have to be paid the Trade Board rate.

13,438. That would not put the rest on it?—No; but they would have to be paid the Trade Board rate, and are paid the Trade Board rate.

13,439. The point was made that some institutions—I think it was Boards of Guardians, who are not exactly the same class of people—engaged people, nominally to be instructors, but really they were doing work?—They ought to pay the rate for those, and I think they probably would. Of course, there is a legal point involved, but in the ordinary way, if

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

a person goes in as a sort of head foreman, working by way of trade, the Trade Board rate ought to be paid in respect of him. It is very difficult to give a general view, because you have to look at the particular circumstances of each case.

13,440. *Mr. Poulton*: Do they not say that they have paid, with the equivalents, more than the Trade Board rates?—Do you mean with regard to inmates?

13,441. No; individually?—I do not know; I have not come across a particular case.

13,442. There are extras?—They may have done, but I do not know of a particular case.

13,443. *Sir Arthur Pease*: I pressed the witness on that point. He said he had no house, but he simply came as an ordinary workman, and got a lower rate than the ordinary journeyman?—I think in the case you mention, they ought to be paying the rate.

13,444. *Chairman*: Then there was some suggestion made about getting wages returns, from the employers?—I do not know that I press that very hard, but it has a bearing on the point that *Sir Arthur Pease* was putting, whether you could get effective inspection. It has been suggested that one of the ways of supplementing inspection would be to have power to require wages returns in certain specified forms, which would at any rate form a sort of basis for knowing whether they were being observed. The obvious objection to it is that it imposes a new and tiresome obligation upon employers, and it may be urged that it would not really give you such exact information as would enable you to arrive at any certain conclusion.

13,445. *Sir Arthur Pease*: You do not mean that it should be done continuously, every week?—No; but that you should have power to require a return from an individual employer or series of employers in a district, instead of sending an inspector, and if the returns looked all right, you would not need to send an inspector. Nothing is more detestable to the employers than making these returns, and therefore I do not suggest it very strongly.

13,446. *Chairman*: Is there anything else that occurs to you?—Those are the only points I have to put.

13,447. *Dame Adelaide Anderson*: I want to ask you again about the ordinary Courts for trying cases.—Yes.

13,448. Is there anything which you would propose, to strengthen the Magistrate's Court, or the Sheriff's Court in Scotland, in the way of knowledge, such as an assessor from the industries?—It would be quite a novel procedure, would it not?

13,449. It would be very novel?—Personally, as I have said, I should like the Munitions Tribunals, because they had that element in them, and they had a much more domestic character than the ordinary Police Court.

13,450. And they imposed penalties, in addition to recovering wages?—Yes. Of course, the difficulty is that whenever a question which involved scope came up, it would have to be referred elsewhere. I do not think it would be worth suggesting any variation in Police Court procedure, because it would be a very big question, which would be primarily a matter more for the Lord Chancellor or the Home Office, and I do not think they would look at it favourably.

13,451. Is there a suggestion which you may put in evidence?—It has been a suggestion which has been mooted a good deal. I think considerable advantages would attach to it, but I do not think that this is the time when it can be contemplated. My feeling is that if there were a Court of that sort, it might take a lot more than industrial cases.

13,452. In the meantime, you think it is not practical to provide Munitions Tribunals?—My view is that this is not the moment when you could contemplate that.

13,453. *Mr. Pugh*: I do not know whether we are quite sure on the point which has been raised as to setting up an enquiry before the establishment of a Board?—I suggested that it might be desirable that the Minister should have power to hold an enquiry in cases where he was in some doubt. At present he can only hold an enquiry if he is pressed, and the Chairman, on my suggesting that as a possibility,

said: "Why not have an enquiry every time before setting up a Board?" and I said that it might lead to delay in some instances, but that if the Committee took that view, it did not seem to me to be an impossible way of proceeding.

13,454. I was wondering if you thought it would simplify procedure?—I do not think so; but it might reassure the trade and the public that there was no arbitrary decision, and that we were really giving everybody a full chance of being heard. I do not think it would mean much less work for us.

13,455. It would not?—No; because we should have to prepare all the facts for the Court.

13,456. *Mr. Layton*: I want to take you right back to the point that we started from, that is to say, the setting up of the Board. You told us in your first evidence that there were three million workpeople covered by Boards now, speaking approximately. You also said that the original words in the Act, that wages must be exceptionally low, probably meant that wages must be lower than the normal rate prevailing throughout the country?—Yes.

13,457. In setting up the Boards since the Armistice, how much weight has been given to that consideration, and what do you interpret the wages condition of the present Act to mean?—We have always looked to both organisation and wages, since the Armistice. But there has been a pre-disposition to assume, since the Armistice, that low organisation probably carried with it bad wages somewhere.

13,458. I will put it in this way: Supposing you found a trade where the average wages were about the average wages in the country, but there was a group which was lower, would you consider that the wages condition of the 1918 Act was met, in a case like that?—I do not think we should.

13,459. Have you turned down any application for a Trade Board on this wages point?—We have; several. Saw-milling is a case in point, and it is an interesting one. Saw-milling runs into some rather highly skilled work, and the rates in some of the saw-mills where they deal with foreign timber in large quantities, ran up to anything like 2s., and so on. When you get to the country saw-miller, that is to say, a person who puts up a little saw-mill near a wood, he is practically an agricultural labourer, and in his case, wages drop down to 1s., even when rates are high elsewhere, and it was strongly urged on us that we should set up a Trade Board really to cover the home-grown timber side of the Saw-milling trade. We recognised that there was a strong case for a Trade Board there, but as the majority, in our view, were in the organised part of the trade, we refused to set up a Trade Board, although there were others not organised.

13,460. I want to lead to this: I want to try to draw from you an opinion, if possible, as to the potential size of the field which can be covered by the Trade Boards. There are three million at present, including the bulk of the distributive trades. If you have the distributive trades, it must be on the assumption that they are paid worse than general wages?—Yes, worse than general wages; worse than the reasonably organised trades.

13,461. Have you any general figure of the number of unorganised people in the country?—Do you mean the wages, or the numbers that exist?

13,462. Have you any idea of the number of industries which would come within the definition of "insufficient organisation"?—I should not like to say. We made a public statement about eighteen months ago, but the figure might double before we had covered the ground.

13,463. Do you mean double the three?—Yes, but I should not like to adhere to that now.

13,464. Would that cover the ground of unorganised trade?—We thought so, at the time. The three millions includes the grocery trade, which is a large proportion.

13,465. Your point is that all except about six millions of workpeople were in trades which were moderately organised?—It is about eight millions.

13,466. *Sir Arthur Pease*: Or in domestic employment?—Yes; or in domestic employment. One of the

22 February, 1922.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

big trades which we have been considering very carefully has been catering; we have been pressed very strongly about that. I should not like to answer your question. I could not estimate the figure at the present moment, but it is obviously a good deal larger than the present figure of three millions.

13,467. *Mr. Layton*: It might be as big a figure as three million more unorganised?—It might.

13,468. Do you think substantially few of them would be kept out by the condition about wages?—About wages being low, do you mean?

13,469. Yes. If you enforced that section of the Act?—I do not think so. One great difficulty that occurs is when a trade has had "pockets"—whether you ought to include that. Immediately after the armistice, perhaps, we might have looked at that rather differently from the way we look at it now, but now, we should certainly not include the trade, unless there were very good grounds, over a considerable area, for assuming that conditions were unsatisfactory. We have now to be satisfied both as to organisation and wages. With regard to the catering trade, we have been pressed extremely hard to put it in. There is no question whatever in anybody's mind about organisation; it is very small indeed, and we have made the most exhaustive wages enquiries in that trade, to satisfy ourselves, before we took action.

13,470. *Mr. Pugh*: Supposing that the trade itself wanted an enquiry, would the Minister agree?—Before setting up the Board, do you mean?

13,471. Assuming you are of opinion that a Board is not justified owing to the conditions which exist in the trade. Then supposing the trade wanted an enquiry?—There is no power at present. We can only have an enquiry if the Minister is setting up, or cancelling it.

13,472. His decision is final?—Yes, his decision is final.

13,473. *Dame Adelaide Anderson*: He would be moved by an expression of public opinion?—Yes. If the trade comes to him and says: "We must have a Trade Board," it is very difficult for the Minister to resist it. But at present the volume of public opinion demanding additional Trade Boards is limited.

13,474. *Chairman*: It is a thing that does move the Minister?—Yes, it does.

13,475. *Sir Arthur Pease*: Where there are "pockets" of bad pay, to men or women, what is the effect?—It would depend on the size of the "pockets," really.

13,476. What I had in mind was that it is much easier for a man, if he has got into a place where wages are unduly low, to move away into another place where wages are better, than it is for a woman. She is more or less riveted to where she is?—I think we are bound to take that into consideration, and the need for the protection of women is one of the principal things behind the Trade Boards Acts.

Chairman: I thank you again, for the assistance you have given to us.

APPENDIX.

WRITTEN STATEMENTS OF EVIDENCE.

THE FOLLOWING IS A SELECTION OF WRITTEN STATEMENTS OF EVIDENCE
SUBMITTED TO THE COMMITTEE ON WHICH NO WITNESSES WERE
EXAMINED ORALLY.

A.—Statements submitted by Employers' Associations, Chambers of Commerce,
and other bodies interested in a number of Trades.

(1)—Statement submitted by The Edinburgh Chamber of Commerce
and Manufacturers.

Report by the Directors of the Edinburgh Chamber of Commerce on the statements received by them regarding the working of the Trade Boards Acts.

The statements which have been received from Members of the Edinburgh Chamber of Commerce in reply to a questionnaire on the working of the Trade Boards Acts contain no evidence that the action of Trade Boards is killing valuable crafts. The operation of the Trade Boards appears to have been and to be a contributory cause of unemployment in certain ways, particulars of which are given below and in the appended memoranda. No general desire for the abolition of the Trade Boards is apparent. The general feeling seems to be that the 1909 Act should remain, but that the 1918 Act should be repealed or radically modified. It is generally agreed that the Act of 1909 achieved a good result in improving conditions of employment in sweated industries.

Unemployment has arisen in many trades through lack of orders. In so far as slackness of trade is due to high cost of production, a contributory cause of which is high wages, the operation of Trade Boards in preventing the rapid adjustment of wages to prevailing conditions is a cause of unemployment.

The following are the chief objections to the 1918 Act which require to be remedied. The system of Trade Boards does not provide for varying conditions. It does not classify workers satisfactorily. The decisions of the Boards are not clear, comprehensible and capable of practical interpretation. In attempting to counteract the influence of the bad employer, the operation of Trade Boards harasses the good employer and tends to prevent harmonious relations between him and his employees.

The operation of the Trade Boards is cumbersome and slow in action. It has also the rigidity which is always an inherent defect in Government regulation and control. Flexibility is essential to the carrying on of trade and industry under constantly fluctuating economic conditions. The system of Trade Boards is wasteful in that it takes a number of persons away from their employment at frequent intervals and retains a large number of officials and other persons who might be more productively employed.

The Trade Boards Acts should not be applied to any trade which is organised for the regulation of wages and working conditions. In any trade which has become sufficiently organised, subsequent to the application of the Acts to it, the application of the Acts should be withdrawn.

Statutory regulation of wages is economically as unsound as would be the statutory fixing of prices of commodities. Whilst it is highly desirable that abuses, such as sweating in certain industries, should continue to be prevented by legislation, it is time

that Government interference in industry should be cut down and strictly limited to the prevention of abuses.

Signed on behalf of the Chairman and Directors of the Edinburgh Chamber of Commerce.

L. L. BLACKNELL,
Secretary.

15th December, 1922.

Appendix I, consisting of an abstract of the replies received from Members of the Edinburgh Chamber of Commerce in reply to a questionnaire on the working of the Trade Boards Acts.

An instance has been quoted of a firm who have closed their works in the vicinity of Edinburgh. Although the owners had come to an arrangement with their employees for a reduction in wages, it was not possible, owing to the order of the Trade Board concerned, to give effect to the reduction, and the works were closed.

A firm of manufacturers of folding boxes or cartons state that their employees in this trade have worked for the past eight years on piece work at higher wages than the Trade Boards have prescribed.

A firm of manufacturing confectioners state that their Trade Board has done them no harm and they consider it an advantage to know that the cost of labour to them is the same as to their competitors.

A firm of paper bag makers state that the introduction of Trade Boards and the consequent levelling up of wages led to the discharge of inefficient workers who could not earn the minimum wage. They also state that they have replaced a certain amount of hand labour by machinery.

A further objection is made to the delay in negotiating and bringing into operation the reduction of wages. (*Note*.—The discharge of inefficient workers should ultimately lead to a levelling-up in efficiency as well as in wages. It is also recognised that the replacement of hand labour by machinery is also economically a good thing in the long run.)

Another firm of paper bag makers consider that the Paper Bag Trade Board benefits both employer and employee. When the rates fixed by the Board came into operation, it was not necessary for them to dispense with any workers, nor will it be necessary if a reasonable percentage is allowed for slow workers. For the working of the Act, good supervision is necessary, not only over large establishments, but also over the small concerns, and it should be carried out with a view of helping the industry. Registration for employers should be introduced and made compulsory for all who enter the trade.

A firm of chocolate manufacturers state that the fixing of wages for girls fifteen years and over at so high a rate, limits the number of girls who can

find employment. They are obliged to turn away hundreds of girls over fifteen years who have had no experience, as they cannot afford to pay the wages stipulated by the Trade Board. If they were allowed to take on girls at a wage which would be satisfactory, both to the girls and the firm, for a few months, the girls would in that time be able to earn the Trade Board wages and probably more. As it is, they are obliged to take on girls between fourteen and fifteen years of age, who generally leave after one or two years when they are becoming of use.

A firm dealing in waste materials view with apprehension the rates which are proposed by the Waste Materials Reclamation Trade Board, but which are not yet in operation. It is thought that many small firms will be put out of business. They also believe that delay in adjusting wages will compel businesses to close down temporarily.

The Scottish Federation of Aerated Water Manufacturers' Associations are of opinion that the 1918 Act should be repealed. It is understood that a full statement in support of this opinion has been furnished to the Committee of Enquiry.

Appendix II.—Observations on the Working of the Retail Bespoke Tailoring Trade Board of Great Britain submitted to the Edinburgh Chamber of Commerce by the Scottish Federation of Merchant Tailors.

(1) The Trade Board is fundamentally faulty, in that instead of making for the harmonising of conflicting interests, its whole tendency in practice is to foment dissension. This is attributable to the fact that the two sides, instead of getting together, to compose differences, bend all their energies to the task of influencing the appointed members, and in so doing are driven to the elaboration of extreme views.

(2) It is unrepresentative in that, particularly on the workers' side, on which the representative members are all, or practically all, Trade Union officials, the persons most affected, i.e., the rural workers, have no direct representation. The Trade Union Officials are, perhaps naturally, only concerned with the large numbers of workers congregated in populous areas. The effect of Trade Board determination upon rural workers has never been seriously considered by the Retail Bespoke Tailoring Trade Board, and the result is that many workshops in country towns have been closed and the work sent to be made up in wholesale bespoke factories.

(3) It is inefficient in that it cannot adequately provide for varying conditions, nor can it classify workers satisfactorily. These functions have in the past been performed with much success by Employers' and Workers' Associations. Its determinations are not comprehended by one-half of the persons responsible for the drafting, not to speak of those, both employers and workers, engaged in the trade affected.

(4) It is harassing to the employer in that he does not know when he is keeping within the law, nor can he get requisite guidance either from the Trade Board Department or from the Board itself, which cannot agree upon the interpretation of its own determinations.

(5) It is wasteful in that it takes from useful and productive employment a goodly number of persons for considerable periods without any corresponding benefits, except, perhaps, to the several classes of officials, on all sides, connected with it.

(6) It is cumbersome in its action, and cannot cope with conditions which may undergo drastic change from month to month.

(7) Its cost to the State is best known to the Treasury officials, but that it must be considerable is apparent to anyone who has experience of the frequent meetings, the prolonged and often futile discussions, and to the number of persons unproductively employed in its operations.

In the view of the Minister of Labour, the Trade Boards Act imposes upon the employers the obligation to keep time records in the case of piece-workers. Having regard to the long established habits and traditions of the trade, this obligation is utterly impossible of fulfilment. Evidence of this fact is in the hands of the Department.

In the course of an address to a meeting of traders at the Grocers' Exhibition, the Minister of Labour deals with a criticism of Trade Boards which has often been made, viz. :—

"That the period—from three to six months—before an amended rate can become effective is too long," and he says, "To-day, with a fall-market, it is the employers' side which urges this. When markets were rising, it was the workers' side who urged it. But that is human nature."

"In fairness to employers it must be pointed out that Trade Boards' rates are minimum rates, and that, should circumstances warrant, it does not necessarily take from three to six months to raise rates (although it is illegal to lower them even by mutual consent). In fact, the employers on more than one of the then existing Trade Boards during the period when cost of living, etc., was rising, agreed to put amended rates into operation without delay."

With reference to the question of Differential Rates for rural areas, the Minister said that if such rates were not fixed, the responsibility was with the Trade Boards themselves, as they had the necessary power.

In as far as this Board is concerned, the statement is a misrepresentation of fact. Strenuous efforts were made on several occasions to secure special rates for rural areas, but these were rendered abortive by the Government Appointed Members, for whose nomination the Minister is directly responsible.

The reason given was the difficulty of finding a suitable line of demarcation albeit from time immemorial until the establishment of this Board differential rates were in operation throughout the whole country.

The failure of the Trade Board to fix suitable rates for rural areas has led to evasion of the Act, and complaints from workers have reached this Federation to the effect that their opportunities of employment have been reduced through the action of their fellow workers, who, during slack periods, left the workshops, and at home worked directly for the public. In so doing, these workers were in a privileged position in not being compelled to exact the Trade Board minimum rate.

(2)—Statement submitted by the Newcastle and Gateshead Incorporated Chamber of Commerce.

BOOT REPAIRING INDUSTRY.

The present Trade Board legislation is responsible for a certain amount of unemployment in the boot repairing industry. It is practically impossible to engage boys or youths owing to the high rates fixed. For instance, if a boy came into the trade at 17 years of age he would have to be paid the same rate as if he had been in the trade three years.

Apprenticeship rates are also prohibitive, and an apprentice to the boot repairing has to be finished

his time at 19, irrespective of what age he enters the trade. The result is no apprentices are being taken for repairing.

No provision is made for adults who have not the necessary skill and who are not worth the minimum rate of £3 5s. This is a hardship on individuals who are under 26 years of age, as their training has been interrupted owing to war service. Ability should be the determining factor instead of age.

No provision is made for different rates for different districts, or different methods of working in shops where the conditions are more favourable for earning a decent wage.

The constitution of the Trade Board Committee is one-sided. On one side there are trade union representatives, and on the other side there is a collection of individuals who in some cases are not conversant with the trade. This is due to the fact that the Minister of Labour selects who he thinks suitable, without reference to the organised employers.

The appointed members, being non-technical men, are hardly qualified to fix a rate which, in effect, they do, as they are the determining factor when a deadlock occurs.

Another grave objection is secrecy regarding matters for discussion by the Trade Board—the trade not having an opportunity of giving their views until the rates have actually been passed and put before the country.

Another disadvantage is the length of time required to alter any particular rate. This is particularly hard at the present time owing to the serious trade depression and the reduced cost of living.

The Trade Board is a great handicap to most employers of labour in the boot repairing industry owing to the fact that 60 per cent. of the trade is carried on by people who do not come under the jurisdiction of the Trade Board. I refer to the one-man business men who do not employ labour. They can sell their labour at what price they like and work what hours they like.

It is suggested that Conciliation Committees be set up in different districts, with an independent chairman who would have some experience of arbitration in industrial disputes.

As there is a fear that the abolition of the Trade Board might result in imposing sweated conditions, I suggest a low fixed minimum wage, to vary according to the rise and fall in the cost of living. Anything above this minimum wage to depend on ability.

The present Trade Board conditions increase the cost of living unduly, cause unemployment, and prevent employers from making any progress.

The decisions arrived at by the Central Trade Board Committee are usually arrived at by the appointed members voting on one side or the other, and their action is influenced by the side that has the best advocates, whereas the guiding factor ought to be the capacity of the industry to pay any particular rate, and inquiries ought to be made in every case as to what effect any proposed legislation will have on any industry.

DRESSMAKING.

Report pointing out where the recent Schedule issued by the Trade Board interferes with chances of doing business and handicaps the worker in search of employment.

The minimum wage is far too high, and our costing system shows us that the work done is produced at such a high cost that it is almost impossible to sell same when completed.

The following list shows the position before the alteration, three months ago:—

20th November, 1920.

Age 14 ...	...	9s.	0d.	per week.
15 ...	...	14s.	0d.	" "
16 ...	...	20s.	0d.	" "
17 ...	...	28s.	0d.	" "
18 ...	...	34s.	0d.	" "
19 ...	...	34s.	0d.	" "
21 ...	...	34s.	0d.	" "
22 ...	...	43s.	0d.	" "

11th July, 1921.

Age 14 ...	...	6s.	0d.	per week.
15 ...	...	11s.	0d.	" "
16 ...	...	17s.	6d.	" "
17 ...	...	25s.	0d.	" "
18 ...	...	34s.	0d.	" "
19 ...	...	38s.	0d.	" "
21 ...	...	43s.	0d.	" "
22 ...	...	43s.	0d.	" "

The advance in wage for beginners is too marked and not sufficient after 18 years of age, when a worker is getting valuable. It is suggested:—

Age 14 ...	...	6s.	0d.	per week.
14½ ...	...	8s.	0d.	" "
15 ...	...	10s.	0d.	" "
15½ ...	...	12s.	0d.	" "
16 ...	...	15s.	0d.	" "
16½ ...	...	17s.	6d.	" "
17 ...	...	20s.	0d.	" "
17½ ...	...	22s.	6d.	" "
18 ...	...	25s.	0d.	" "
19 ...	...	30s.	0d.	" "
20 ...	...	35s.	0d.	" "
21 ...	...	40s.	0d.	" "

This would reduce the producing costs, thereby encouraging more trade, and would open the door for many young girls, thousands of whom were discharged in Newcastle a year ago, when girls of 14 had to be paid 9s. per week and girls of 15 years 14s. while learning their trade. Once out of a situation their chance of employment is small, for manufacturers of ready-made garments have been and still are sacrificing their profits to turn stocks into money, thereby causing the unfair competition which has almost killed the dressmaking trade of this country.

RETAIL BESPOKE TAILORING TRADE.

From the Hon. Secretary, Newcastle Branch National Federation of Merchant Tailors.

"I have to say that I have an abundance of evidence to establish the contention that the rates are affecting orders adversely, and that they are, in consequence, the means of much unemployment in the tailoring trade.

"I have had numerous applications from both males and females desiring to be trained, and also on their behalf from the authorities of institutions, but have not been able to place anyone for several months past. There is also great difficulty in placing disabled men who are being trained under Government supervision at Birtley, and several applications for training have had to be turned down because employment cannot be found for those who are already partially trained and ready to leave the factories.

"There is a demand for cheaper goods, and employers in the tailoring trade are confident that if the Trade Board restrictions were removed and they were allowed some liberty that they would be able to considerably increase the volume of trade which would be to the mutual benefit of the workers and employers. As it is, there is the greatest possible reluctance to engage fresh hands, and large numbers of workers are only employed on part time, when at the present moment all workshops should be working with pressure."

STATEMENT REGARDING THE EFFECT UPON EMPLOYMENT OF LABOUR AS A RESULT OF THE OPERATIONS OF THE LAUNDRY TRADE BOARD AND ITS ORDERS.

The effect of the introduction of compulsory rates of pay under the Trade Boards Acts for workers employed in the laundry industry has resulted in a remarkable, and in some instances anomalous, situation with respect to the employment of labour.

The effect has varied according to the areas, as, for instance, between rural and industrial.

In rural areas the rates of pay before the introduction of the Trade Board legislation were considerably below those paid in the industrial centres, and as the first minimum rate fixed by the Laundry Trade Board which became operative on 24th November, 1919, was approximating that which was being paid in industrial centres by recent agreements between the employers' representatives and the trade union officials, the resultant increase to workers in rural areas was in a way abnormal.

The employer in rural areas consequently had to increase prices charged to the public to a larger extent than was necessary in industrial centres, which was, unfortunately, economically unsound, because owing to the very nature of the things the

public in rural areas were less able to pay the increased charges, and had better facilities for doing the work at home than had the public in industrial centres.

The result was that the laundries and workers in rural areas were the greatest sufferers, and many laundresses found it necessary to reduce their staffs by 50 per cent., and others were compelled to close down altogether.

In passing it may be mentioned that it is stated by Labour Exchange officials that this state of affairs is not borne out by their statistics. This statement is based upon registration of workers at Labour Exchanges, but the following fact appears to have been lost sight of. As these workers have been thrown out of employment they have been absorbed in other directions. Many have gone into domestic service, others into other industries, while a large number of the workers were married women who have not deemed it necessary to register. Then it is beyond doubt that many of these women have been able to eke out a living by taking in washing at home at a price which is impossible for any employer to accept and meet the requirements of the Trade Board Orders.

Other effects which have more or less been common to all districts are as follows:—

- (1) The rates fixed by the Trade Board for young workers are considered to be very high, with the result that the employer has not used this type of labour so freely as hitherto. It was previously quite a common practice in laundries to keep a proportion of young labour for the purpose of doing very light work, during which time these workers were training for more important positions. The result of the

high rate for this class of worker has been to restrict its employment to the lowest possible point.

- (2) As against the conditions outlined in (1), many laundresses have found it economical to supplement adult labour with young workers. This has been fairly general, and the percentage of young workers at present employed is higher than that at any other period. This would appear to be contradictory to the statement in paragraph (1), but it must be remembered that as a result of other causes, added to Trade Board legislation, the total number of laundry workers to-day is considerably less than in 1914, or even 1919.
- (3) With the operation of a comparatively high compulsory minimum rate of wages, the charges for laundry work all over the country were affected. In rural areas this was direct, but in industrial centres indirect, as new agreements were necessary with trade unions giving a rate of wages at a figure higher than the Trade Board rate, although not necessarily maintaining the differentiation as between the rural and industrial centres as had previously obtained.

It was therefore necessary to increase charges for laundry work all over the country, and the effect has been to reduce the volume of work sent to laundries, and consequently the number of workers required. It cannot and is not maintained that the introduction of a compulsory rate of wages was the sole cause of the increase of prices charged to the public. This was only one of the causes, but as wages in the laundry industry approximate 50 per cent. of the weekly turnover, it was obviously the most effective and direct cause.

(3).—Letter and Statements submitted by Employers in the Borough of Lowestoft.

TOWN CLERK'S OFFICE,
TOWN HALL,
November 7th, 1921.

MY LORD,

TRADE BOARDS AND THEIR EFFECT UPON JUVENILE EMPLOYMENT.

On the suggestion of the Ministry of Labour and at the request of local employers of labour, we have the honour to submit for your Lordship's consideration certain resolutions passed at a meeting of employers in the Borough of Lowestoft as to the effect of Trade Board rates upon the trade and condition of employment in the district.

The local education authority acts in co-operation with the Ministry of Labour under the Education (Choice of Employment) Act, 1910, and the Juvenile Employment Bureau is organised and worked by the staff and in the premises of the Ministry of Labour. A Juvenile Employment Sub-Committee is appointed by the local education authority.

The Juvenile Employment Sub-Committee for some time past has been seriously concerned at the fact that local establishments are not employing apprentices and learners, and in July last the Sub-Committee determined to make closer enquiry into the cause thereof and for that purpose requested the mayor to invite employers to meet him in order to discuss more thoroughly the whole position.

Such a meeting was held on July 22nd last when every trade employing juveniles was represented. A further meeting was held on July 26th last under the chairmanship of Mr. Alderman Tuttle, J.P., when the following resolutions were unanimously passed:—

- (a) That in the opinion of this meeting of employers of labour in the Borough of Lowestoft, the system adopted by the Trade Boards in fixing wages for employees is mainly responsible for the inability and unwillingness of employers to engage juvenile labour, owing in particular to:—
 1. The high rates of wages laid down for beginners.

2. The practice of fixing wages and increments according to age and irrespective of merit and industry.

3. The practice of making one rate applicable to the whole country in preference to district rates varying according to the prevailing circumstances of the towns and districts to which they are applied.

- (b) That copies of the foregoing resolution be forwarded to the Prime Minister, the Minister of Labour, the President of the Board of Trade, the Secretary of the Trade Boards, the Member of Parliament for this Division, the Education Committee of Lowestoft and the trade associations of the country; and that they be respectively asked to support the principles embodied therein.

In reply, the Minister of Labour as the responsible Minister for administering the Trade Boards Acts, stated that it was his intention to enquire very thoroughly into the whole question of statutory minimum rates during the autumn, and offered to arrange for an officer of the Department to discuss with employers the matters referred to in the resolutions.

Mr. W. Goodchild of the Ministry of Labour discussed the subject with employers on the 24th October, and in the course of the conference Mr. Goodchild suggested that the meeting should lay their views before the Committee now sitting of which your Lordship is chairman.

As indicated in the resolutions passed on July 26th last the chief obstacles to the employment of juveniles are:—

1. The high rate of wages laid down for learners.
2. The practice of fixing wages and increments according to age, irrespective of merit and industry.
3. The system of making one rate applicable to the whole country in preference to district

rates varying according to the prevailing circumstances of the towns and districts to which they are applied.

As to the first point, it was pointed out to the meeting that beginners or learners must necessarily be instructed by skilled operatives at the expense of the employers, who, in addition, invariably suffer pecuniary loss from unavoidable damage or waste of material during the course of instruction. Consequently a high rate of wages makes it impossible to engage and train beginners.

Regarding the second point above mentioned, it is true that the Trade Board rates laid down are *minimum* rates, but the high cost of production arising from such rates has had the effect of making the *minimum* rate also the *maximum* rate. This is not only a local experience but one that applies to all small towns.

Standard rates of wages according to age tend to negative all initiative among employees, who probably feel that there is little advantage in striving for improvement when a fellow worker of the same age who has displayed no ambition to succeed has the same amount to draw on pay day.

The meeting was also very definite as to the unfairness of the operation of Trade Board rates in fixing one rate for the whole country. It seems unreasonable that a rate fixed for London and large industrial centres and factories should apply to the small towns and agricultural districts.

There was laid before the meeting detailed particulars of the numbers employed locally in the various trades showing the number employed before and after the setting up of Trade Boards. These particulars are attached to this letter for your Lordship's information.

In the opinion of the meeting a great deal of the unemployment in the trades therein referred to can be directly attributed to the effects of the operation of Trade Boards.

The meeting requests us respectively to suggest in the event of the Committee over which your Lordship presides coming to the conclusion that statutory control of wages cannot be abolished, that your Committee should consider the desirability of recommending the more extensive appointment of District Committees. It is felt that District Committees consisting of an equal proportion of employers and employed in each industry might well be entrusted to fix such *minimum* rates of wages as would enable employers to employ the maximum number of persons in their business whilst at the same time acting as a safeguard against the risk of sweated labour and thus achieve what was understood to be the primary reason for the introduction of Trade Boards.

It is also agreed that all articulated apprentices and learners engaged by agreement between parents and employers should be exempt from control from both Trade Boards and District Committees. Juveniles now leave school between 14 and 16 and to fix a standard wage for beginners according to age is impractical in small businesses.

If necessary the meeting is fully prepared to submit such further evidence on the subject as Your Lordship may consider desirable.

Enclosed herewith are particulars received from some of the employers of the Borough bearing on the subject.

We are, my Lord,
Your Lordship's obedient servants,

(Signed) S. C. HUMPHERY, Major,
Mayor.

(Signed) E. TUTTLE,
Chairman of Meeting.

The Right Hon. the Viscount Cave, G.C.M.G.,
Chairman.

Trade Boards Committee of Enquiry.

BOROUGH OF LOWESTOFT.

STATISTICS OF LOCAL INSTANCES OF UNEMPLOYMENT DIRECTLY ATTRIBUTABLE TO THE TRADE BOARDS. *Handcraft Dressmaking and Millinery Trades.*

Name of Firm.	Number employed prior to setting up Trade Board.	Number now Employed.
Tuttle and Sons, Ltd. ...	38	13
W. H. Learner ...	15	7
*Wills & Culf (Millinery only).	5	2
H. F. Roberson ...	10	NIL
Catlings, Ltd. ...	6 to 10	NIL.
Wheatley and Son ...	18	5
Bonnet Box (Millinery only).	8	4

* The managing director of Messrs. Wills and Culf states that in the recent re-organisation and enlargement of their business the directors fully intended running a dressmaking workroom employing at least 20 hands, but considered Trade Board control would prevent it being a success and it has therefore not yet been started.

In addition numbers of small dressmakers and milliners in the town who employed from one to four hands are running their businesses alone without the help of juveniles whom they once were willing to instruct and train in these useful crafts.

ROPE, TWINE AND NET TRADE.

PARTICULARS FURNISHED BY STUARTS AND JACKS, LTD.,
OF MUSBURGH AND LOWESTOFT.

The Trade Board came into force, as far as this industry is concerned, in March, 1920.

There was apparently a reduction in output after the coming into operation of the Trade Board, as will be seen from the following table:—

January, 1920.

Number of looms working, 19.
Number of employees, 117.
Number of workers per loom, 6.16.

July, 1920.

Number of looms working, 20.
Number of employees, 170.
Number of workers per loom, 8.5.

The output of the total number of looms in each case was to all intents and purposes the same, being slightly heavier during the earlier period.

The netting produced was in each case to all intents and purposes exactly similar.

It will be seen from the foregoing that there was a considerable reduction in output per worker, necessitating the employment of 24½ per cent. workers per loom extra, or 47 workers in all.

The following information is also of interest:—

The number of workpeople employed in 1914, approximately, 70.

Number of workers for whom accommodation for employment could be found, 70.

Number of people employed to-day, 53.

Number of workers for whom accommodation for employment could be found, 200.

It will thus be seen that, although the works have been extended very largely to accommodate more workpeople, our staff has been, since the operation of the Trade Board, very considerably reduced.

In spite of the slump in trade, sufficient enquiries for goods have been received to enable the works to have worked to very nearly their full capacity during the last 12 months, but unfortunately, owing to the artificially high level of wages in this country, necessitating the maintenance of high prices, it was impossible for sufficiently attractive prices to be quoted to enable us to obtain any of this business.

Goods of similar, or slightly inferior quality to those manufactured here, can be bought at from 10 per cent. to 20 per cent. lower prices abroad.

The following incident may be of interest. A letter was received at the beginning of October from a firm of merchants, in reply to a quotation, asking if it were possible to quote 6 per cent. to 7 per cent. lower in order to obtain a large order from abroad. It was necessary to reply that everything had been cut to a minimum bar wages, which had been fixed by the Trade Board at the same high level for the past eighteen months.

In a number of local buildings and workshops, fully qualified beatsters (net menders and repairers) are being paid from 18s. to 19s. per week of 48 hours, with a bonus of 1s. per net. A good worker mends about three or four nets per week, so that her wages work out at about 21s. to 25s. per week. These buildings and workshops are not registered or recognised as factories under the Trade Board Act, so that the wages they pay might be considered to be the correct economic wage, being fixed by the law of supply and demand for labour of this description in the locality.

It should be noted that the workers are quite pleased and content to work for this sum, indeed in the smaller villages considerably lower wages than these are being paid.

The foregoing wage gives a reduction of about 42 per cent. on the wages that have to be paid under the Trade Board, viz., 34s. for Time Rate and 36s. for Piece Rate per week, to exactly the same workers and for exactly the same and similar work.

It should be noted that a reduction of 42 per cent. in wages would have given a reduction in the prices of the quotation referred to earlier in one case of between 5 per cent. and 6 per cent., and in the second case of 7 per cent. The conclusion to be arrived at is interesting.

Repeated requests are received from parents of young children just leaving school to employ their children at nominal sums, in order that they may learn the trade. Previous to the Trade Board coming into effect this was done, a good worker being put in charge of some four to six children to instruct them properly. Under present conditions it is impossible to pay a worker of 14 years of age, with no knowledge of the work, 16s. 9d. per week of 48 hours, in addition to which it is necessary to pay an old worker about 36s. to 40s. per week for supervision, and in return for practically no productive work. It is further necessary to stand the charge for all work damaged during the course of instruction, and this last item may be very considerable.

The foregoing is not a commercial proposition by any means.

This trade is very closely associated with the Fishing Industry, and in many cases female workers employed in it are sisters and daughters of fishermen. These men under the present conditions are earning from 45s. per week upwards. They are subject to considerable risks and hardships, and are not by any means assured of continuous employment. It hardly seems fair that their female relatives should be earning four-fifths of their wages under very much better conditions, and with more continuous employment and regular hours. Incidentally the high wages paid to these workers directly affect the fishermen, as they enhance very considerably the cost of nets.

The machinery of the Trade Board appears to be very slow and cumbersome in operation. In this particular trade, rates of wages were fixed in March, 1920, at 34s. and 36s. respectively for Time and Piece rates, and in October (one year and seven months later), when conditions have been entirely changed for at least twelve months, notice has just been received intimating that wages will fall from the initial high level by 4d. per hour, or 2s. per week, in each case.

It should be noted that a further month must elapse before this can come into effect.

This small reduction is totally inadequate, and can only be alluded to as ludicrous, when considered in conjunction with the state of the trade, and its complete inability to pay such wages.

Attention should be paid to the extraordinary discrepancy in the wages paid to young girls of 14 on

entering this trade as compared with the wages paid in the Drapery, Laundry, Clothing, Tailoring and other trades, which come under the same Trade Board system of fixing rates.

PARTICULARS FURNISHED BY THE GOUROCK ROPEWORK COMPANY, LIMITED, LOWESTOFT.

When this Board came into existence we employed 106 girls making trawl nets. We now employ 53 only. A reduction of 53.

Fishing nets are divided into two classes, viz., trawl net and drift net. Girls making the former are Braiders while those making the latter are Beatsters.

Braiders make trawls of Manila hemp. This hemp, from the time it leaves the ship as raw material until it reaches the consumer as a finished article, is handled at every stage at a controlled and enforced rate of wages.

Trawl nets are now being offered to our customers by Dutch manufacturers at 20 per cent. under our prices. The Exchange rates are against the Dutch, but as they are not hampered by restrictions they can under sell us in our home markets.

The Prime Minister says employers and employees should meet and make mutual concession on wages, etc., to enable us to secure orders. Under the Trade Board this is impossible and illegal.

With every increased rate in this trade, production has dropped. Many girls here are content with about 27s. per week. More girls at high rates are therefore required to achieve a given output, and the increased cost of production has lost us the market. Scores of Braiders are now out of work.

Representation on the Board.—Our workers are not represented on the Trade Board. One was invited; she agreed, but was turned down because none of our workers has ever belonged to a Workers' Union.

The Trade Board as at present constituted makes it impossible to take workers into any other industry, or even another branch of the same industry, as the following example will show.

At the request of our workers we tried this, but were stopped by order of the Trade Board official.

We endeavoured to train our Braiders as Beatsters. This would have increased their ultimate efficiency by 50 per cent. and the product of their labour while learning would have been largely exported. These Braiders were most anxious to learn the other branch of the work, and offered to learn at 15s. per week, i.e., the amount of their Unemployment Benefit. Their economic value to us was 5s. per week. We gave them 17s. and arranged for other advances as they became efficient. They were all delighted. Then came the Trade Board inspector. He condemned the procedure, demanded full Trade Board rates, and threatened police court proceedings. We had to close down and the workers were stood off.

In spite of this official having deliberately caused unemployment the Ministry of Labour has since ruled that Beatsters do not in all cases come under the Act. Yet we were threatened with prosecution for breach of the Act.

Beatsters (i.e. Cotton Net Menders) can be, and are still employed in small numbers in buildings not registered as workshops or factories at any rate of pay from 15s. upward to 21s. and the Trade Board is helpless.

LAUNDRY TRADE.

CASE FOR DIFFERENTIATION OF RATES AS BETWEEN LARGE AND SMALL TOWNS.

Under existing law and orders of the Trade Board, Lowestoft rates of wages must be the same as London, but it is impossible to obtain London prices in a poor town like Lowestoft.

Expenses in Lowestoft much heavier than London, e.g. :—

Lowestoft.

Water 2s. 6d. per 1,000 gallons plus 35 per cent.

Gas 6s. plus 45 per cent.

Rates 21s. in the £.

Electricity Power 3d. per unit, Light 11d. per unit.

London.

Water 9d. per 1,000 gallons.

Gas 4s. to 5s.

All material costs more because of rail and carriage.
In consequence of high rates no learners are now

employed. Prior to Trade Boards, girls (learners) were employed to the number of 45.

Laundry learners must be paid 13s. per week, whereas Dressmakers' learners may be started at 7s. per week.

(4.)—Statement submitted by the Combined Traders of Cornwall.

We respectfully submit evidence of the working of the various Trade Boards affecting the County of Cornwall. Most of the evidence has already been laid before a representative of the Ministry of Labour, Mr. Goodchild, and we believe the Minister is conversant with the extreme difficulties of the traders of the County. Furthermore, some of the Appointed Representatives—to name two, Professor Lt. Hobhouse and W. Addington Willis, Esq.—have continually to deal with problems arising through the inability of Cornwall to pay some of the Rates fixed.

Attached are statements from the Dressmaking, Tailoring, Boot and Shoe Repairing, and Grocery Trades. It has not been possible to secure a statement from the Milk Distributive Trades, as apparently they have either dismissed their staff and are doing the work themselves, or are taking no notice of the Rates fixed by their Board.

The economic conditions of the County are terrible through the closing of the tin mines, the bad season for fishing, and the general depression in China Clay and Quarry Industries. In the mining area 78 cent. are unemployed.

It is not claimed that the present distress and unemployment is wholly due to the Trade Boards, but the situation has been considerably aggravated thereby. Many who were satisfied with their wages have had to be dismissed from their employment through the high rates fixed, and are now unemployed; others are working long hours at low pay in their own homes. Thus the Trade Boards have been greatly to the detriment of those they are supposed to benefit.

It will be seen that the attached statements compare pre-war conditions of employment with those during the boom period of trade, so actually represent the amount of unemployment caused by the Trade Boards.

A friendly spirit of co-operation exists generally between the employers of Cornwall and the workers, and in many instances the workers are totally opposed to the Rates fixed by the Boards. Unfortunately the workers seem to have no redress, as Cornwall has no workers' representatives on the Boards, and those who are supposed to represent them are in most instances totally ignorant of the local conditions; witness the Grocery and Provision Trade Board where the workers' representatives are chiefly Trade Union Officials with neither knowledge of the County, or any thought for the worker.

The difficulties which face the Boards sitting in London are realised, as they have to legislate for the whole of the country, and it is difficult to fix rates applicable to one County only, without raising many problems. The conditions are, however, different in Cornwall in many respects to those of the rest of the country, and must have consideration if the County is not to suffer under a permanent disability.

The Trade Boards system has not failed in Cornwall through ignorance or prejudice, but on account of the inability of the employers to pay the rates fixed without incurring a heavy financial loss, consequently to insist on still carrying out the awards will still further increase distress and unemployment. Wages in Cornwall have always been low in comparison with those of the industrial area, but the cost of living has also been low. It is the earnest wish of the employers to raise the status of the workers, but regard must be had to the conditions. The attempts to unduly raise wages by the various Trade Boards have failed, and have merely caused further unemployment and distress.

To start industry again, it will be necessary to relieve the County altogether of the hampering effects of the Trade Boards, or to amend the working of

them to secure the right of the employers and workers to fix, by joint consent, their rates of remuneration. That this may be done is shown by the Bakery Trade where the employers and workers continue.

The employers are willing to appear before the Committee if required and support the evidence given herein.

WESLEY HOSKEN,
Hon. Secretary.
Combined Traders of Cornwall,
3, Clare Villas, Truro.

DRESSMAKING TRADE.

The direct effect of Trade Boards on the Dressmaking and Millinery Trade in Cornwall is shown by the following figures:—

Employed in 1918.				
Assistants	...	...	...	532
Improvers	...	...	...	35
Apprentices	...	...	...	131
				698
Employed in 1920.				
Assistants	...	...	...	198
Improvers	...	...	...	7
Apprentices	...	...	...	15
				220

Total decrease 478 or 70 per cent.

Many workrooms which are entirely closed are not included in this list.

These figures apply only to workrooms of members of the "Cornish Drapers' Federation," and therefore do not include the scores of small private dressmakers amongst whom the reduction in staff is even more pronounced.

It is most important to emphasise the fact that these figures were taken up to 1920, before the depression in trade commenced in this County.

The reason for this state of affairs is not far to seek.

Rates were fixed by the Trade Boards *without the slightest regard* for local conditions.

These rates were such that they necessitated a high price as the cost of making a dress or hat.

As a consequence less dresses were ordered and many hands discharged.

In spite of this, and in face of the most strenuous opposition from the whole trade, the Trade Board twice increased the rates.

Prices for making had again to be increased, and the public either would not or (in most cases in this County) could not pay, and to a larger extent than ever withheld their orders.

Result more unemployment.

If these results occur (as they did) when business and industry were prosperous, what is likely to occur when the very reverse is the case?

The Dressmaking industry in Cornwall, if not yet quite dead, is fast becoming extinct, due entirely to the high rates fixed by the Dressmaking Trade Board.

HORDER & BARRAND,
Hon. Secs.

THE TAILORING TRADE.

The Members of the Cornish Branch of the National Federation of Merchant Tailors have just been circularised, and the questions they were asked to answer all related to the working of the "RETAIL BESPOKE TAILORING TRADE BOARD."

From their replies it is easy to gather that the Trade Board has had a disastrous effect on the working of their businesses, and has caused a tremendous amount of unemployment in the County. They are unanimous in condemning a National Wage rate, but strongly urge uniform rates as arrived at by a "Cornwall County Conciliation Board," with power to enforce its decisions.

The replies were required by the Headquarters Staff of this Federation for use before the special Committee considering the future of Trade Boards, therefore I have struck an average note, and they are as follows:—

Have present rates affected your Business?—
Most seriously.

*If so, to what extent?—*Employing only half pre-war staff, and those on 32 hours per week instead of 57.

*Have you endeavoured to meet conditions by reducing prices?—*Yes.

*If so, to what extent?—*The award of October, 1920, to Females of 15s. per week increase has not been charged on to customer, Clothes therefore being sold at cost price, or slightly over, and no provision being made for Establishment charges.

*Have your customers refused to order on account of high prices?—*Yes.

*Have you had to reduce your staff owing to present rates and short hours?—*Yes.

*If so, to what extent?—*About one-half and those from 57 to 32 hours.

The conditions prevailing in my own business in this City are typical of those existing in all businesses in every Town and Village in Cornwall.

Pre-war I employed 22 people in the Workshops at 57 hours per week.

Total hours worked per week ... 1,254

I now employ 12 people at 32 hours per week.

Total hours now worked per week ... 384

A total loss of production in this one shop of 870 hours in one week, thus creating dearer clothes and much unemployment.

The award of October, 1920, to Females, R.B. 7, worked out, through shortening of working hours, which was national (no business being able financially to meet it), that both Females and Males took home at the week-end less money than they had previously earned, so that Employers through shorter hours and Employees earning less, no one was satisfied.

Before October, 1920—

Women worked 48 hours for 34s. per week.

Men " " " 76s. "

Within a few weeks they were only earning, through the increase to women:—

Women ... 32 hours at 1s. 0½d. ... 32s. 8d. per week.

Men ... 32 " " 1s. 7d. ... 50s. 8d. "

The men dropped back through Trade Union rule, "that one out, all out," and lack of trade.

RICHARD HAWKE,
Hon. Sec.

17/10/21.

SHOE REPAIRING TRADE.

The employers generally being unable to secure an equivalent price for the product to pay the fixed standard wage have had to discharge their men. The men in many instances desirous of continuing their employment offered to work at an agreed wage below the standard which the employers, for obvious reasons, could not entertain. As a consequence many of them are working in their homes without restrictions as to hours, earnings or control (as in the cases of workshops), and being content with a sum less than the minimum wage award, owing to their inability to earn it, set up an unfair competition with those endeavouring to carry out the regu-

lations as to wages. The "handyman" of other trades with shortened hours of working turns his hand to shoe repairing, competing with and adding to the difficulties of the recognised tradesman.

The employment of boys has practically ceased, and the village shoemaker who usually employed at least one boy and taught him a useful trade cannot afford to pay the rate set out and teach the boy his trade. The rate of pay for boy labour is quite out of proportion to the earnings of most village shoemakers, so they do without the small assistance that could be rendered by a boy for at least the first year or two. This has had rather a serious effect, as usually the village boy who was physically defective was taught a useful trade, but is now debarred from employment through the Wages Board award. True exemption might be obtained, but employers will not make the application, knowing full well, through experience gained during the war, the difficulties and trouble entailed in getting the exemption through a Department.

The Shoe Repairing Trade awards made, based on conditions prevailing in large centres of population, applied to country districts and the towns of Cornwall generally, which are very small in comparison, are inequitable and unworkable, and in remote country districts bear hardly on those who have to employ the services of the trade affected, and in no case is this phase more apparent than the Shoe Repairing trade.

As far as Cornwall is concerned the Wages Board has brought no benefit to the workmen it was intended to do, but it has parted employers and employees, working in harmony for a great number of years, and has disadvantaged both without compensating advantages to anyone.

October 24th, 1921.

THE GROCERY TRADE.

The above Federation comprises the Retail Grocery Trade of Cornwall, and seriously wish to place before you the abnormal conditions prevailing in the County through the complete failure of Tin Mining, with the result that there are over 80 per cent. of the workers in this area unemployed, and in such dire distress that, as you are well aware through the press, have to be relieved by public subscriptions to prevent starvation. To a very great extent the same conditions prevail in the Clay and Quarry industries, and already the Trades Boards rates applied to Dressmaking, Boots and Shoes, and Tailoring have proved a complete failure and greatly added to the list of unemployed. Under these conditions to enforce Trades Boards rates on the Grocery trade, which will necessarily mean an increased cost on food, is adding to already existing conditions, and would certainly mean a dismissal of assistants, as the trade at the present is labouring under heavy financial difficulties.

We earnestly ask you to seriously consider all these reasons, and to decide that Employers and Employees should be left to settle the wage question amicably together, which we are certain would be carried out in a more satisfactory manner, instead of forcing a wage that could not possibly be met. The Assistants are also most anxious that this course should be carried out, as in many cases the Shop Assistant is the only worker in the home, thus preventing entire want and poverty.

We also strongly urge that a decision be deferred until Lord Cove's Committee present its report to the Ministry of Labour, and in any case should bear in mind that Cornwall under present conditions cannot possibly hope to pay the proposed rates and ask that this County be exempt from Trades Board scales.

WESLEY HOSKEN,
Hon. Secretary.

(5)—Letters addressed to the Isle of Wight Chamber of Commerce.

THE ISLE OF WIGHT DRAPERS' AND OUTFITTERS'
FEDERATION.

57, High Street,
Newport, I.W.

VENTNOR TRADE PROTECTION ASSOCIATION.

The Country House,
High Street, Ventnor, I.W.
25th October, 1921.

DEAR SIRS,

4th November, 1921.

LAST spring, in support of a protest we sent up to the Dressmaking and Light Clothing Trade Board, the 20 principal Dressmakers in the Island were questioned and it was found that 96 Assistants and apprentices had been discharged, owing to the compulsory wages.

These increased wages caused the prices of garments to be so high, that the public would not give orders.

Principals are now either working with much lower staffs, or in some cases have closed entirely and no apprentices are being engaged.

The state in the Millinery is practically similar to the Dressmaking, but we have no figures, one of the worst features in this trade is that it is quite impossible to take on apprentices at the present figures, although parents are anxious to have them taught such a useful trade at half the compulsory wages.

I remain,

Yours faithfully,

(Signed) C. MORRIS DABELL,

Hon. Secretary.

Trade Boards.

DEAR SIR,

I BEG to give you the following specific cases, showing the detrimental effect of these orders:—

The Misses Thurgood Sisters, High Street, Ventnor, can prove that their Dressmakers and Milliners have had to be stood off from time to time, instead of being kept on permanently as before—also that their trade has decreased owing to the increased price which has to be charged to the public.

Mr. A. J. Sharpe, High Street, Ventnor, can prove that he has had to discharge a number of Dressmakers and Milliners, also that that department proved a loss during his last financial year.

Mr. W. H. Harris, Draper, Milliner and Dressmaker, High Street, Ventnor, discharged one Milliner owing to the compulsory wages.

I am informed that Miss Bartlett, Milliner, &c., Regent Street, Shanklin, can also prove a detrimental effect.

Yours truly,

(Signed) HARRY BARTON,

Secretary.

(6)—Statement submitted by the Scottish Distributive Trades Federation.

We are instructed by the Scottish Distributive Trades Federation to submit to the Committee appointed to investigate the administration of Trade Boards, the following representations with regard to the position of the Scottish Retail Distributive Trades on the subject. In terms of instructions given at a general meeting of the Federation held on 16th November, 1921, a questionnaire was issued to various retail trade associations composing the membership of the Federation, and replies have been received from the following associations, viz.:—

The Scottish Federation of Meat Traders' Association.

The Glasgow and District Dairymen's Association.

The Scottish United Retail Fruit Trade Association.

Edinburgh and Leith Fruit and Flower Trade Association.

The Scottish Music Merchants' Association.

The Glasgow and District Retail Fish Traders' Association.

Glasgow and West of Scotland Ironmongers' and Allied Trades' Association.

The Incorporated Guild of Hairdressers, Wig-makers and Perfumers.

These trades among them comprise 43 different associations, with a membership of, say, about 3,000 members, and include in most cases in their membership practically all the important retail businesses in these respective trades. These trades have considered at executive and general meetings the question of the application of a Trade Board to their respective trades, and the following unanimous conclusions have been arrived at in connection therewith:—

- (1) All these associations are opposed to a Trade Board being appointed or having been appointed for their trade. With one exception, none of these trades has any system at present of wage regulation between employers and employees, nor (with the same exception) has any of them had any agreement or negotiation with the Shop Assistants' Union, or any other union of employees on the question of wages.
- (2) These trades are of opinion that the conditions under which they respectively work are such as to make it difficult to apply

the Trade Board principle of uniform regulations to them. For example, in the case of those dealing with perishable articles, such as milk, fruit, vegetables, and fish, it is considered that the conditions are such as to make a uniform week throughout the respective trades impracticable. In others, the variation between trade in large towns and country districts, and also the seasonal variations in the trade, the opposition of hawkers, &c., are responsible for the view that such trades are, owing to their conditions, not suitable for the application to them of the Trade Board system.

- (3) Enquiries made seem to show considerable differences in the number of hours worked in the various trades, which apparently vary from 44 up to 60 hours per week, depending on the circumstances of the respective trades and the seasonal variations.
- (4) These trades accordingly could not even agree to the principle of a 48 hours' week, and overtime being paid beyond this, as most of these trades pay their assistants wages during holidays and during sickness, in substitution for overtime worked. In certain cases, owing to the variability of trade conditions, assistants are, at various times, not fully employed. It is also pointed out that in other trades, such as the dairy trade, the principle of overtime tends to make the roundsman take a longer time than necessary for his calls.
- (5) Another objection taken to the Trade Board system is that there is likely to be overlapping between many of these trades and other trades, causing doubt as to whether employees fall under one Trade Board or under another.
- (6) All the trades state that there is, in their respective cases, no tendency to pay low wages, and that a Trade Board is therefore unnecessary.
- (7) They are also of opinion that it is impracticable to discuss the technical questions of a trade before appointed members who have no practical knowledge of the trade.

- (8) They further object to the Trade Board system as it at present involves Co-operative Society representatives sitting at the Trade Board on the employers' side at the Trade Board meetings. They strongly protest against this in view of Co-operative Societies not being in the same position as private employers in respect *inter alia* that—

- (1) they are free from the present very serious burden of Income Tax on profits at the rate of 6s. per £;
- (2) they pay no Corporation Tax; and
- (3) their businesses are not run on the lines and are not expected to conform to the standards of efficiency of private traders.

- (9) With one exception no strike has ever taken place in any of the trades reported on.

- (10) They further consider that it would not be practicable to fix reasonable and uniform rates of wages applicable either to the whole country or to certain differentiated districts owing to the great variations in trade, which exist throughout the various parts of the country and in the various classes of businesses in each respective trade.

- (11) They further desire to point out the very large proportions in shopkeeping trades of instances where the business is run entirely by the owner with the assistance of his wife or some member of the family. To most of such businesses, the Trade Board Regulations accordingly would not apply at all. The difficulties of competition would thus be increased and many anomalies would be created.

- (12) Other difficulties pointed out in connection with the application of the Trade Board system refer to the expense involved to trade associations, many of which are small and struggling, and have difficulty at present in making ends meet. It is impossible to carry on a Trade Board system without a trade association, and accordingly the result is that a few of the more public

spirited members of the trade who form the membership of the trade association have to undertake the whole expense involved in the application of the Trade Board system to their trade, including the expenses of ascertaining trade opinion and securing reasonable unanimity of trade views.

- (13) Further objections to the application of the Trade Board system refer to the trouble in conforming to the regulations which would be experienced by small shopkeepers, many of whom do not keep books at all, and to many of whom it would be impossible to keep the records which would be required to satisfy the inspectors under the Trade Boards Act. This would apply particularly if complicated wage scales were inaugurated.

- (14) A further difficulty in connection with the imposition of Trade Boards on the Retail Distributive Trade is that certain trades have been in the habit of paying their employees partly by a commission on sales. In many cases this is a firmly established custom of the trade, and the commission paid represents a not inconsiderable proportion of the earnings of the employees. It is thought that it would be impracticable to have this system embodied under Trade Board Regulations, and the inauguration of a Trade Board would accordingly involve this system being scrapped or modified with consequent disturbance to the ordinary methods of the trade.

In terms of instructions we accordingly submit the foregoing for the consideration of your Committee.

(Signed) FRANK IRVING,
President.

(Signed) JOHN M. CROSTHWAYTE,
Secretary.

207, West George Street,
Glasgow.

9th February, 1922.

B.—Statements submitted by Employers and Employers' Associations interested in particular trades: I. Boot and Shoe Repairing Trade.

- (7)—Extract from a letter received from Messrs. Goodlad and Goodlad, Boot and Shoe Makers and Repairers, Lerwick, Shetland, dated 26-10-21.

The general working conditions under the present regulations are bad, as only Lerwick would seem to be compelled to observe them. All the other districts can, apparently, do as they like.

With regard to new work, the Trade Board rates only apply to bespoke work, and how can a tradesman be expected to be satisfied with less wages for boots made for stock purposes of the same class? This is a system of payment we could not do. We used to employ quite a lot of men during the winter, making up a fairly large stock of hand-made pegged boots, and paid fair wages for the work. These boots could find a ready market at a small profit, and both we and the men employed were quite satisfied, but this cannot be done under the present regulations.

With regard to repairs, this trade is gradually being killed, as the poor people—and we have them in abundance here—cannot possibly pay the prices required, especially for children's repairs. The consequence is that everyone who can do so is doing his

own repairs. Tradesmen in other trades, receiving trade union wages at their trade, are buying materials, and repairing their own and families' footwear. The obvious result of this is that those who would employ repairers cannot do so. Then again small tradesmen, who employ none but members of their own families are not subject to the regulations, and can do as they like.

What is required here is to revert to the old system that worked so well. Your inspectors will be able to tell you that they did not find us to be of the profiteering class of employers, as the amount we were paying for jobs done was quite reasonable, and considerably better regulated in regard to prices paid per job.

We hope you will give this statement your careful consideration, and having regard to the distance we are from the centres, and the class of work done here, between which and that done in cities there is no comparison, you will grant our request, and once more let Shetland stand on its own bottom.

(8)—Statement submitted by Mr. A. Bilton, General Manager of Messrs. J. Coombes & Co., Multiple Shop Boot Repairers; Headquarters, Harrogate, (Over 200 Branches in towns in the North of England.)

"I beg to state that the constitution of the Boot and Shoe Repairing Trade Board leaves much to be desired.

On the employers' side are representatives of the retail trade, and the Shoe Distributors' Association. There is also a member of the Co-operative Union who must frequently find himself in opposition to the representatives of private enterprise; then there are two surgical bootmakers whose trade is more identified with the organisation which governs the wages in the boot and shoe manufacturing industry than with the boot repairing trade. It appears to me that in the selection of Trade Board representatives, it has been, in a large measure, forgotten that this is a Boot and Shoe Repairing Trade Board. Then again, the co-operative movement is so distinct and antagonistic to private enterprise, that it is not in the interest of private employers that co-operative representatives should sit in their ranks. The co-operative movement is so vast that there should have been a separate Trade Board, or Industrial Council, to deal with the wages and hours of its employees.

In my opinion, the greatest anomaly is in regard to the National Federation representatives; these are nominated by a body which does not represent employers nearly so much as non-employers of labour. The National Federation, with its allied associations, is chiefly representative of that numerous class of "master" boot repairers, who employ no labour, and are content with the amount of trade they can do with their own hands. This class of repairer, who through association membership has a voice in the nomination of six employers' Trade Board representatives, views with indifference increases of wages and limitation of hours, as he pays no wages himself and is unrestricted as to working hours. Many of these non-employing "master" repairers frequently give up business and take a situation on time or piecework wages, and it is therefore not surprising that they should raise no objection to high wages and overtime rates.

There is no exclusive trade organisation for employers in the boot repairing trade. Employers are in the minority among "master" repairers. Firms such as I represent are neither understood nor represented on the Trade Board.

Not only are the piecework rates as recently fixed by the Trade Board excessively high, but the manage-

ment wage of £4 per week, irrespective of the shop managed, is ridiculous. There is a decided limit to the trade of a boot repairing shop, and when I say that the takings at some of our branches are as low as £5 per week, you will realise how impossible it is to pay such excessive management wages. We have given up many shops in consequence of the high wages, shortened hours, high rents, etc., and we have four shops temporarily closed at present until we are relieved of some of the heavy expenses.

Before the war we had 208 branches open. We have now only 155, and we have the fixtures and machines for 53 branches lying idle, and high Trade Board wages and limited hours is largely responsible for our being unable to open other branches to use up these fixtures and provide employment for numerous managers and workmen. The irony of the position is that there are scores, perhaps hundreds, of men who would gladly accept the management of one of our branches at less than the Trade Board rate if we were allowed to employ them.

When the £4 management wage was fixed I had many applications for work from men who had managed small repairing shops, and who had been discharged because their employers could not afford to pay them the Trade Board wage.

I have no objection to the £4 management wage, provided the trade done is sufficient to bear such a charge, but where trade is poor the wage should be much less, especially as we give inducements to managers in the way of commission on takings and earnings bonus.

Men's new boots can now be purchased at 16s. 6d. per pair, and it is hardly likely that the public will be content to pay the present price for boot repairs when new boots can be obtained so cheaply. Unfortunately for us, principally owing to the foregoing reasons, we cannot make any reduction in our charges for repairing, and non-employers of labour who are outside the scope of the operation of the Act and who run their small businesses at very little expense, and unrestricted as to hours, can undercut us and take our trade away.

Trade Boards can increase wages and shorten hours (for a time), but they cannot increase trade. The Boot and Shoe Repairing Trade Board is killing enterprise, and it will drive the trade back to the cellars and huts and sweated conditions of the past."

(9)—Statement submitted by the Wales and Monmouthshire National Boot Trades Federation.

1. The Trade Board machinery needs revising so as to quicken its operations. It now takes several months to make any alterations, while markets change quickly, and it should be possible to vary conditions in about a month.

2. The Board could be improved so as to enforce its orders on all alike, as half the traders are left out of present rules, and a continuance of this is impossible.

3. District rates should be considered, as conditions, living expenses, wages, rates, etc., are not the same in all parts, and a "level" rate all round is unfair.

4. Co-operative representatives are out of place on the employers' side. There should be a separate board or section for "co-ops."

5. Board members should have authority to make enquiries and submit reports. It would increase efficiency and decrease expense as they were scattered.

6. District Committees could gain local views, and their meetings should consist of locals only.

7. On the question of the Trade Board membership, the nominations of the trade should be accepted by the Minister of Labour. The Federations resent the alterations made in the past. It was against the British system.

(Signed) W. B. NOBLE,
Secretary.

(10)—Statement submitted by the North of Scotland Master Shoemakers' Association.

So far as the North of Scotland is concerned, the unanimous opinion of the master bootmakers is that the Trade Board Regulations have been hurtful to the best interests of the trade.

Prior to the introduction of these Regulations, trade in the North generally was very good, while

the rate of wages paid to the employees was fair and equitable in every way. Workers, according to their ability, were paid a good wage, and on their part they appeared to be and were quite satisfied with their treatment, and they were fully employed. Since then, chiefly owing to the high rate of wages and the

shorter hours of labour fixed by the Board, only first-class workers are employed, while the slow workers have gone to swell the ranks of the unemployed, or have started a one-man business of their own. In many districts at present over 40 per cent. of the workers are drawing the unemployment dole, while those who started business on their own account are able, by working longer hours, to cut prices much below those who employ labour and have to conform to the Regulations of the Trade Board. In the town of Nairn, in this district, there are eight of these price-cutters; in Inverness 11, and in Elgin seven, while in several of the smaller towns the proportion is equally large.

We contend that this condition of matters is very detrimental to the interests of the trade, and especially injurious to employers of labour, who have to conform to the Regulations of the Trade Board.

In this connection we consider that employers have to meet with unfair competition, and we call upon the Trade Board to provide a remedy.

The Regulations of the Trade Board make it impossible for an employer to take on an apprentice to learn his trade. Previously, it was customary for employers to engage apprentices for a period of three or four years, starting at a wage of 5s. for the first year, 7s. 6d. for the second, and 12s. 6d. and 17s. 6d. for the third and fourth. By the end of the period the young man had received a thorough training in both making and repairing, and was thereafter able to take his place as a competent hand and to earn the current rate of wages. Even in sparsely

populated districts it was customary for an employer to have an apprentice along with one or two journeymen. In several country districts within a radius of 20 miles as many as a dozen apprentices were to be found in training. To-day in these districts *not a single apprentice* is to be found in training. This is not because young men are not willing to learn the trade—the exact opposite is the case—but simply on account of the supervision required during the first two years especially, and the high rate of pay fixed by the Board, employers cannot afford to engage men. Further, the Regulations have not allowed for local conditions, in respect that the North work is of a heavier and more laborious nature (all hand work) to that of the South, where work is done collectively. As a direct result of these conditions, within the next 15 or 20 years, the making and repairing of boots will be carried on exclusively by the older men.

In view of the foregoing, and in the light of our experience, we consider that the Trade Board has not been a success, and that the sooner we are loosened from its control the better for all concerned.

In our opinion, the appointment of practical men from both sides, and the setting up of District Boards for the arrangement of hours, wages, &c., would be a much better arrangement.

For the North of Scotland Master Shoemakers' Association.

(Sgd.) JOHN S. GRANT, Chairman.

A. D. M'CAKIE, Secretary.

II. Brush and Broom Trade Board.

(11)—Memorandum submitted by Manufacturers in the Midland Counties and Wessex.

It is desired to explain, in the first instance, that the considerable number of manufacturers on whose behalf this statement is made are in a number of cases members of the British Brush Manufacturers' Association, and it is because the evidence given by the president of that organisation does not represent their attitude that this separate statement is considered necessary.

The majority of the manufacturers of the Midland Counties and Wessex are unable to associate themselves with the evidence already given, and it is accordingly considered necessary to adopt this means of presenting the views of these manufacturers upon the operations of the Brush and Broom Trade Board, against which extreme objection is taken. It is necessary to explain, in the first instance, that the Midland and West of England brush manufacturers are affected by the decisions of the Brush and Broom Trade Board to a greater extent than is the case with manufacturers operating in other areas of the country. Their failure to secure the desired measure of satisfaction which it was hoped would accrue from the deputation to the Minister of Labour in November last, so far as the rate of wages ultimately fixed is concerned, it is hoped that this statement will be the means of assisting any such alteration in the scope of the Board as will render it the instrument of effective regulation of wages, which, at the present time, it has failed and will continue to fail to be.

The recent confirmation by the Trade Board of proposals for the increase in the rates paid to pan hands has already caused serious dislocation in the employment in the industry, and the following explanation will, it is hoped, demonstrate the direction in which the industry has been made to suffer.

The process described as "pan work" consists of three phases:—

- (1) The boring of holes in a stock or handle.
- (2) The forming, cementing, tying, and re-cementing a knot of fibre or bristle, and fixing it in the hole so bored.
- (3) The trimming and fliriting of the broom or brush when the second process has been completed.

In the larger manufactories of London, in some parts of Yorkshire and Lancashire, and in the whole

of Scotland, it appears that all these processes are more often carried out by male labour at a remuneration now varying from a piece-work basis time rate of 3d. per hour for apprentices in their first year to a piece-work basis time rate of 1s. 4½d. per hour for men after a five years' apprenticeship, or over 21 years of age.

In most of the other parts of England it is, and has for a long time been, the custom to employ a much larger amount of female labour, especially for the second and most important phase of pan-work, at a remuneration now varying from 3d. per hour for girls of 14 to 8½d. per hour for women over 21 years of age. Piece-work basis time rates, both for male and female labour, are about 10 per cent. higher than the time rates, and, of course, many pan hands are able to earn considerably more than those rates, but the average rate of pay for a man is about double the pay of a woman. The rates are those fixed by the Board, and there is no suggestion of the existence of sweating.

The present Regulation enacts that the rates at present paid to female pan hands should remain *unaltered* so long as the women are employed on *certain specified kinds of work*, but that if they make any other kinds of brushes their time rates should be increased either to 1s. or 1s. 4½d. per hour, according to the class of work upon which they are employed, and it further enacts that no girl employed at pan shall be paid less than 4d. per hour, and that after two years at the trade, whatever may be her age, she shall receive the same rate of pay as a woman, piece-work rates being raised accordingly.

It will be observed that these proposals have in many cases resulted in the doubling of the wages now being paid to women, and would more than double the wages paid to girls, while at the same time, on other work of very similar description, the *present rates of wages would remain unaltered*.

The classification of the work, for which these various rates of 8½d., 1s., and 1s. 4½d. are to be paid, is presumably intended to be in accordance with the skill or strength required, but it cannot be found that the classification rests on any logical basis; women earning 8½d. per hour are working beside others who are earning 1s. 4½d. per hour at easier

work. The same woman earns in one hour double as much as she can earn the next hour on other work. It is manifest that this leads to much jealousy and ill-feeling, and renders it almost impossible to regulate wages.

A further aspect of the anomalous position created is that a girl, after her first two years of training, is paid at the full rate for a woman, whereas a boy does not receive the full pay of a man until he has served a full apprenticeship of five years, or attained the age of 21. Hence girls of 16 in many cases receive higher rates of wages than men of 19 or 20 years of age. Indeed, in many cases they earn higher wages than the men who are boring for them, or than the office and warehouse staff.

The foregoing details will serve to indicate the nature of the whole proposal which in practice has proved to be both impracticable and prohibitive. It should be remembered that the proposals for the increases that have now been put into operation did not emanate from the workers concerned, who were not, as a matter of fact, consulted in any way as to their wishes in this matter, and in addition to this fact it is learned that the effect which the payment of the unjustifiably enhanced rates is having has induced the workers themselves to request the Minister of Labour to effect a reduction therein in order that their continued employment may not be jeopardised.

The increases in the rates paid to female workers has been manoeuvred by the men in their supposed interests, their desire being, without question, to supplant the female labour already engaged, which, so far as the manufacturers in question are concerned, has been a feature characteristic of the industry for a period approaching a quarter of a century.

The burden thus imposed upon the manufacturers situated in the Midlands and the South-Western districts is aggravated by their inability to compete with other brush manufacturers domiciled in London, who are not under the necessity of consigning goods intended for export, carriage paid (which the manufacturer located in the Midlands is required to do), whilst paying the same rate of wages as the manufacturer in London. It is manifest that in these circumstances the confirmation of the increased rates by the Board has inflicted a very serious damage to an important section of the trade.

It is further contended that the action taken by the Brush and Broom Trade Board in arriving at a decision as to the class of work which may be considered as that capable of being performed by a male or female worker, is beyond the scope of the Trade Boards.

It is felt that the operations of the Board should be confined, as was the case when they commenced to function, to the fixing of a single minimum rate, variable according to the conditions ruling in different districts, leaving higher rates for workers of special skill to be arranged between employer and employee.

The results which have followed upon the carrying into effect of the proposal previously referred to may be summarised as follows:—

Price.—This varies in every factory according to the class of work produced and the age of

female workers employed, and has removed the possibility of competition by the British manufacturer with brushes of foreign origin.

Employment.—The satisfactory nature of the relationship which has always subsisted between the employers and the employees in this industry justifies the view that the welfare of the industry will be better served by a diminution in the interference which the operation of the Trade Board inevitably produces in the conduct of individual businesses.

It is necessary to remember that at the present time, when every trade is reducing its prices, a similar step on the part of manufacturers in this industry is expected, but the result of the advance in wages has been to render this not alone impossible, but responsible for an increase in the cost of the manufactures varying from 20 per cent. to 25 per cent. on the existing prices.

An appreciable reduction in the number capable of being employed has already taken place, and the tendency appears to be a further decrease in employment, which will not be available for male workers, because the rates paid to them are identical with those required to be paid to female workers.

Nevertheless, despite the unfortunate results which have been attendant upon the application of the machinery of the Trade Board to the brush trade, the manufacturers generally are seized with the useful possibilities and potentialities of the Trade Board system, given a more efficient form of administration. It is therefore hoped that the outcome of the present enquiry conducted under the auspices of your Committee will be to bring about a revision which will be conducive to the following results:—

- (1) The restriction of the scope of the activities of the Trade Board to the fixing of a single minimum rate, variable according to the conditions ruling in the different districts, leaving higher rates for workers of special skill to be arranged between employers and employees.
- (2) A reduction in the period which is required to elapse before a variation in the rates fixed may be made effective.
- (3) The decision as to the work to be performed by male and female workers, to be left in the hands of those engaged in the trade.
- (4) Such an alteration in the qualifications of those selected to serve as appointed members on the Trade Board as will render their decisions of practical rather than theoretical value.

Under such circumstances, it is believed that the Trade Board machinery may become of service in the efficient regulation of wages, in this and other industries—a development which the manufacturers recognise as of vital concern to them—and tend to promote the prosperity of the industry and the expansion of that amicable relationship which is so necessary for the successful co-operation of employers and employees.

(12)—Letter submitted by the Walsall Chamber of Commerce.

David Hayward, Ltd.,

Wholesale Brush Manufacturers,
Excelsior Works,
Bloxwich.

13/11/1921.

DEAR SIR,

We beg to give below a few of our objections to the Trade Board operating in the brush trade, which we trust will be of some use to the Associated Chambers to-morrow.

Our first objection is the composition of the Board, which is composed of equal numbers of employers and employees, the latter being principally represented by Trades Union Officials, and the casting

vote is in the hands of members outside the trade, who are appointed by Government. Wages are the chief controversial point, and the power to pay wages must ultimately rest on the stability of the employer. A knowledge of the state of trade and the prospects of business are absolutely necessary, and must be taken into consideration in assessing the burdens the industry can carry. Neither the Labour nor the Government representatives can reasonably be expected to know anything about the position of the industry.

Our next objection, in common with other manufacturers, is that 75 per cent. of the saddlery brushes produced in this country are made in Walsall district, and not a single Walsall manufacturer was asked to

sit on the Board, and when we applied for permission to be heard, it was ignored.

The minimum time rates compare hopelessly with the piece rates fixed. In fact, in most instances we were paying considerably more than the time rate when the Trade Board came into force, but the piece rates are fixed altogether out of proportion to the time rates, and, in some instances, workpeople, both men and women, could earn three or four times as much on the piece rates than on the time rates. Take, for instance, the price for drawing dandy brushes; the pre-war price was 10d. per 1,000 knots, and when the Trade Board came into force we were paying 1s. 6d., at which price they could earn the minimum time rate wage.

The present Trade Board piece rate for this class of work is 2s. 11d. per thousand, at which price it would have been absolutely hopeless to compete with foreign manufacturers. What the local manufacturers have done is to pay them a time rate wage according to the amount of work they do. This is only one of the anomalies which exist right through the classification, and we could quote a good many more instances of a similar nature. We have lately had a proposal to advance the female pan hands from 9½d. to 1s. 2½d. per hour, and, considering the present state of trade, this rate was impossible, and a further proposal to advance to 1s. 1½d. per hour has also been strongly objected to.

We may also remark that when this Board came into force we had to dispense with a number of our people, chiefly old hands who had been with us a number of years, who came any time they liked just to help when they felt inclined. These people could not earn anything like the wage laid down, and they had to be dismissed owing to the high rates that had been fixed for their work.

There are a good many more instances we could give you, but our chief objection to the piece rates fixed under the Trade Board is that it is not a minimum wage but a maximum wage, and the slacker has to be paid the same as a skilled worker who will get on with his work.

We do not think there is a chance of the revival of the brush trade in this country until the Trade Board governing it is entirely abolished, and some description of a Whitley Council set up between the employer and employees, which could easily settle all disputes with reference to wages paid.

Yours faithfully,

for DAVID HAYWARD, LTD.,

(Sd.) S. J. HAYWARD,
Director.

The Secretary,
Chamber of Commerce,
Walsall.

(13)—Letter received from Messrs. Thomas Goode, Ltd., Brush Manufacturers, Birmingham.

December, 1921.

DEAR SIR,

IN reply to your letter of November 22nd, my own opinion as to the Brush and Broom Trade Board is that both employers and employed did very well without it, that (at all events as regards the provinces) it has proved injurious in its operation, detrimental to trade, productive of unemployment, and discouraging to industry, and that it is doing much to destroy the old friendly relations which have existed between employers and employed. I should like to see it abolished.

As regards brush manufacturers generally, I would point out that, at a meeting attended by 24 manufacturers, and held in Birmingham on July 26th, 1921, it was resolved unanimously that "The existence of the Trade Board has proved detrimental to the interests of the brush trade, and that it should be abolished." A copy of this resolution was forwarded to all the Members of Parliament for Birmingham, soliciting their help towards the abolition of Trade Boards.

I have spoken to two manufacturers who were selected by the Ministry of Labour to serve on the Board. They say that in their opinion the Board should be confined to its original function of fixing a single minimum rate variable according to the conditions prevailing in various districts, and leaving higher rates for workers of special skill to be arranged between employers and employed.

Personally, I think that it is neither advisable nor necessary to have a Trade Board to do this. I would rather see one minimum rate applicable to all trades, and all forms of industry fixed in each district, either by some existing governing body, or by a committee of employers and employed in each district. The minimum rate so fixed would prevent sweating throughout each area, and would from a trade point of view, favour those areas where the people are more thrifty and industrious; it would not tend to become a standard rate as do the rates now fixed by the Trade Board. I could say more on this subject, if desired.

If it should be ruled that Trade Boards are to continue, the following points should, I think, receive attention:—

(1) Everything possible should be done to facilitate closer relations between employers and employed in each factory, and in each district. Under present conditions, we feel that it is futile to discuss wages

and conditions with our workpeople. All these things are fixed by the nominees of the Ministry of Labour on the Trade Board, and except at great waste of time, and at great expense, we cannot go there.

(2) *Local Trade Boards.*—The great fault of the present system is excessive centralisation, and too much officialism. A Board should exist in every centre, such as London, Bristol, Birmingham, Leeds, Manchester, Edinburgh, &c.

(3) *Powers of the Boards.*—The compulsory powers of these Boards should be limited to the fixing of one minimum rate for each sex (and for each age in the case of children and young persons). The Board should also be encouraged to discuss, and arrange other trade matters, but without compulsory powers, unless perhaps in the matter of limiting the proportion of apprentices and learners.

(4) *Official Members of the Board.*—These should disappear, the other members should have power to elect their own chairman and secretary, either from within or from without their number.

(5) *Selection of Employers' Representatives.*—These should be elected by all the manufacturers in the area. At present the employers' representatives are selected in a very one-sided manner. The brush trade is noticeable for the large number of small masters. These are practically unrepresented on the Board, and would in any case be unable to spare the time to come to lengthy meetings in London. Out of 13 so-called employers' representatives, seven either live, or have works in London, hence London interests are over-represented. This has proved detrimental to the interests of the provinces. The members appear to have been selected on the nomination of the British Brush Manufacturers' Association, which does not comprise half the manufacturers of the country. Similarly though far more women than men are employed in the trade, yet the representatives of the employed comprise only two women. Under a proper system of representation this would be changed.

(6) *Expenses of the Members of Boards.*—These should be borne by the parties concerned. The present arrangement by which all members of the Board receive £1 a day, and their travelling expenses (from the public purse) causes workmen's representatives, especially, to protract and multiply Board meetings, as they are better off while the Board is sitting.

(7) *Frequent changes in trade customs and rates of wages* should be discouraged. Trade is only hampered and unsettled by frequent changes.

(8) *Printing*.—Circulars have been drawn up in such an involved manner, and one so obscured by legal verbiage that it often takes much longer to find out what is meant, than to do it when it is found out. If official members disappear, and the work of

Trade Boards is confined to the fixing of one minimum rate, the abuse complained of will also disappear.

Believe me,

Yours very truly,

(Signed) THOS. F. GOODE.

The Secretary,
Committee of Enquiry into Trade Boards.

III. Coffin Furniture Trade.

(14)—Extract from a letter received from the Coffin Trades' Section of the British Traders' Association, Birmingham.

I am desired to say that on the whole the manufacturers are of opinion the Trade Boards Acts have been beneficial to the trade (coffin furniture and casket making). At any rate, the advantages have outweighed the disadvantages. The greatest complaint we have to make is the unnecessary delay in administration. We are of opinion that where the employers' representatives and the workers' representatives agree mutually upon any rise or fall in wages, as the case may be, or indeed upon any matter affecting the Trade Boards Acts, that upon submission of the details confirmed in writing by both sides, those agreements already reached should immediately be-

come operative or, at any rate, should become operative within a limited seven days, or at the outside 14 days.

We are of opinion that the time taken up in calling meetings for confirmation, the absurd delay which takes place for objections, and the further delays which take place for the final meetings are entirely unnecessary, and are prejudicial to the best interests of both employers and workers.†

† A letter was also received from the Coffin Furniture Trade Board urging the desirability of a reduction in the period required for bringing rates into operation, especially in cases in which proposals had been settled by agreement.

IV. Corset Trade.

(15)—Letter received from the British Corset Manufacturers' Association, Ltd.

26th January, 1922.

DEAR SIR,

CORSET TRADE BOARD.

At a meeting of the employers' representatives on the above Board held on 23rd inst., the question of the advisability of the employers submitting evidence to your Committee was considered, when the meeting decided that it did not appear to be necessary to request that a member of the Board should submit evidence orally to the Committee.

At the same time, however, I was instructed to state that the employers' representatives expressed a view in favour of the continuation of Trade Boards, as in their opinion, judging from their experience of the Board for the Corsetmaking Trade, they considered its operation as having been a decided advantage to the trade, in that it has (a) made for better conditions of living for the workers by the payment of the higher wages generally paid by the better employers; (b) brought about better organisation in many factories; and (c) been the means of improving the relations between employers and employed as since the formation of the Board no disputes have taken place.

In expressing the above view in favour of the continuation of Trade Boards, I am, however, to submit that it is their considered opinion that alterations should be made upon the Trade Boards Acts to assist in the administration in order that the work of the Boards may be made more elastic. There is reason to believe proposals as to such alterations have already been made to your Committee by various employers' organisations, and no doubt these will receive the serious consideration of the Committee.

For the information of your Committee I might perhaps add—

- (1) That the Board was established on 17th July, 1919;
- (2) That all the employers' representatives on the Board were appointed by the Minister of Labour upon the suggestion of this Association excepting two employers representing the retail section of the trade;
- (3) That the first meeting of the Board took place on 29th July, 1919, and there have in all, up to date, been eight meetings of the Board and seven meetings of the Administrative Committee;
- (4) That the first general minimum rates fixed by the Trade Board were for—
 - (a) Female workers of 18 years of age and over a general minimum time

rate of 8½d. per hour, and a piecework basis time rate of 9½d. per hour; and

- (b) For male workers of 22 years of age and over a general minimum time rate of 1s. 1½d. per hour, and a piecework basis time rate of 1s. 3½d. per hour.

These rates were made effective by the Minister of Labour on 1st December, 1919.

- (5) That at a meeting of the Board held on 17th February, 1920, certain rates for male skilled workers were fixed, the highest general minimum time rate being 1s. 5d. per hour (i.e., for cutters), and these were made effective by the Minister of Labour on 15th March, 1920;

- (6) That at a meeting of the Board on 6th/7th October, 1920—

- (a) The minimum rates of female workers of 18 years of age and over were increased as follows, viz., to a general minimum time rate of 9½d. per hour, and a piecework basis time rate of 10½d. per hour;

- (b) The minimum rates for skilled male workers were also increased; the highest general minimum time rate being to 1s. 9d. per hour for cutters.

and these rates were made effective by the Minister of Labour on 29th November, 1920.

- (7) That at a meeting of the Board on 30th August, 1921, reductions on the minimum rates were fixed by the Board as follows, viz. :—

- (a) In the case of female workers of 18 years of age and over to a general minimum time rate of 8½d. per hour, and a piecework basis time rate of 9½d. per hour; and

- (b) The minimum rates for skilled male workers; the highest rate being to 1s. 7d. per hour for cutters.

and these rates were made effective by the Minister of Labour on 3rd October, 1921.

Yours truly,

(Signed) C. J. HEALY,
Secretary.

V. Dressmaking and Millinery Trades.

(16)—Statement submitted by the Scottish Blouse, Overall and Underclothing Manufacturers' Association.

(1) Generally speaking this Association is in favour of Trade Boards, but not of the present machinery, particularly as this relates to professional representation of the workers.

(2) The multiplicity of Trade Boards is condemned.

(3) The costly nature of the Trade Boards is condemned.

(4) We do not favour the appointment of a chairman and appointed members who have not some experience of trade conditions. There is at present an undue number of representatives of the workers who are not skilled in the trade, i.e., workers are frequently represented by professional representatives who have no practical knowledge. In this trade most

of the present representatives on the Trade Board have little or no knowledge of the *Light Clothing Trade*.

(5) We are in favour of machinery being administered by the Board of Trade. It is the view of this Association that the work of establishing and administering should be transferred to the Board of Trade, as it is considered the Board of Trade is in a better position to know, not only home, but foreign trade requirements.

(6) This Association favours "side voting," and considers it should be enforceable in all Trade Boards at the request of the majority of either side of the Board.

(17)—Statement submitted by the Portsmouth and District Dressmaker Employers' Association.

Trade Board rates have had a most disastrous effect on the private Dressmaking Trade in Portsmouth, there are quite 150 dressmakers who have ceased employing, they find it quite impossible to pay the rate of wages demanded by the Board, this being quite a poor town, many customers are quite unable to pay the high charges which have to be made to enable the employer to pay the wages and get a fair living for herself.

The rate for learners is far too high, they cannot possibly earn the amount they have to be paid and, when employed only a few hours a day, what they could learn in two years under ordinary circumstances it will take twice as long for them to learn their trade. While for the girl of 16 years who wishes to start learning the trade, the case is hopeless, as no one would pay the wages, consequently there are large numbers of girls at the present time doing nothing who could be employed at a more reasonable wage. The parents of these children do not clamour for these high wages, but beg you to take them at a lower rate which, of course, we are not allowed to do. The rates of pay also cause dissatisfaction to the workers, a girl who is quick at her work naturally resents a much slower worker being paid the same amount as herself, and does not

take the interest she would do if she was paid according to her ability instead of her age.

May I suggest that there should be free contract between employer and employee up till the age of 18 years, also district committees to govern the rates of wages according to the conditions of the different districts, some being so much more wealthy than others? If some alteration is not made, there seems every possibility of the private Dressmaking Trade dying out altogether, which will cause great distress among the employers, hundreds of girls have previously been trained in the smaller workrooms where now there are none being taken. We are perfectly willing to pay a fair rate of wage, but strongly object to the money being raised every six months. We also object to many members of the Trade Boards having no personal knowledge of the working of very small businesses and not representing any special trade or association. Hoping that the Committee now sitting may see their way clear to make some very great alterations to those at present existing, that the small dressmaker may be enabled to continue her business and still train girls in one of the most useful trades.

(Signed) (Miss) L. INGRAM,
Hon. Secretary.

(18)—Letter from Mrs. Doswell, Dressmaker, Chippenham, Wilts., forwarded by Mr. George Terrell, M.P.

DEAR SIR,

I am writing to you in reference to my dressmaking business as I know you take an interest in the people you represent in Parliament.

I have carried on my business successfully for 35 years. Six years ago I employed 13 girls, to-day I have not enough work to employ two constantly.

My old customers when settling their bills tell me that it will be the last as my prices are exorbitant.

I frequently refuse girl I am expected by the Board of Trade to pay. You will see it is bad for the employees as well as the employer. The girls would willingly work for less money.

This is a trade where girls can work at home and charge what they like, but they cannot earn the Trade Board wages in 48 hours.

The factories also have an advantage over us because younger hands can be employed on straightforward jobs. Where things are made, say, by the thousand, they would soon become an expert at their job, but in cases like mine, where everything is made to fit every person and every style different it cannot be worked on the same lines. People are buying ready-mades imported from other countries where labour is cheaper.

I had an employee who was with me three years. She left and went into a book shop. She had to

leave there for an ex-Service man who returned. She would now like to return to dressmaking. Anyone with any common sense would understand the girl would be out of touch with the work, and yet all I can get from the Ministry of Labour is that I must pay the girl 8d. per hour, which she knows she cannot earn and does not wish for it. Under the circumstances I shall not be able to employ her. Can you wonder there is so much unemployment? The Board of Trade is preventing honest people from getting work, and hitting the Dressmaking Trade.

The girl's father I refer to is John Michells, head gardener to the Lady Muriel Coventry, if you would care to verify my statement.

If I could reduce my prices I could get more work and employ more labour, and yet I simply cannot do anything. I should not like to see girls paid the pre-war rate, and the present for young girls is just as absurd.

I may state I have one employee who has been with me 33 years; one left this season who has been 17 years and another 12½ years, and I have lived at the same address 35 years. You will see I am not a stranger.

Trusting you will do your best for me as I know you have for others.

Yours very sincerely,
(Signed) L. J. DOSWELL.

(19)—Statement submitted by Mr. E. S. Reynolds, Draper, Bridport.

The information I should like to place before the Commission relates to the effect of Trade Boards upon small businesses, particularly those in small country towns, as regards:—

- (a) Employment.
- (b) Training of young people.

For 30 years I have been connected (first as manager and later as managing director) with a retail drapery and outfitting business that has belonged to my family since 1787; in addition to the usual shops, showrooms, &c., there are workrooms for (a) tailoring, (b) dressmaking, and (c) millinery. The total indoor staff employed during my management has varied between 25 and 40. The town, Bridport, has a population of about 6,000, and is surrounded, except on the sea side, by an agricultural district. There are several factories in the town and neighbourhood for the manufacture of lines and nets.

A retail business accordingly depends for the bulk of its trade on Wednesdays (market day) and Saturdays.

In giving the results of our experience, I believe they will be found typical of hundreds of similar businesses all over the land.

Tailoring.—We formerly employed from four to six males, including a cutter.

The scale of wages last fixed by the Board necessitated a rise in prices that has almost stopped bespoke order entirely, and after carrying on for the last 12 months at a loss we have had to close the workshop and get rid of the staff. The number of garments ordered this year is less than one-third of the orders in 1919 and of pre-war years.

The shop has always been worked on the "individual" system—each garment being made by one man—and consequently we are quite unable to compete with advertising firms in larger towns, whereby sub-division of labour and the employment of a good deal of female labour garments can be produced at a much lower rate—in fact, we are now sending our cloth away and getting suits *cut, made, and trimmed*, at a good deal less than the wages we were formerly paying for making alone.

Dressmaking.—A similar situation has arisen in this department. We formerly employed a staff of from eight to ten, including apprentices; now the number is reduced to four, and the department is not paying its way. A good deal of work that used to be entrusted to us now goes to dressmakers who are not troubled with Trade Board rates, and so can considerably undercut us in price. We have now ceased to take apprentices, as the future is too uncertain and the rates of wages is too high.

Millinery.—Although there is a workroom, the milliner prefers, as a rule, to do all her work in the showroom, of which she has charge, including the care of furs and children's garments. She has always had the assistance of an apprentice (a second one sometimes starting before the senior has finished her time), who gets a thorough training in practical millinery, as well as experience in stockkeeping and serving customers. The commencing age here is frequently higher than in other departments, but the

rate now laid down by the Trade Board makes it impossible to continue training apprentices.

It will be seen that the results in our business have been that there has been a drop of about 25 per cent. in employment, whilst three former openings for training are now closed. Should the distributive side of our business be brought under a Trade Board, I fear the results would be very serious.

I should like to make it clear that, from the purely financial point of view, I do not think the closing down of these workrooms will entail any serious loss to the business. Ready-to-wear clothes will be more pushed in place of the "bespoke" trade, whilst our special orders can always be sent to one of the large centres, where there are facilities for dealing with them promptly and at a lower cost than we could work at here. Looking solely at the *economic side*, then, it is quite possible that the small workshop should not be encouraged; but, on the other hand, I would suggest that it is in the ultimate interest of the nation that our countryside should be maintaining these small industries of very varied character, and that it must continue to be the training ground of a great number of our young people.

The training of apprentices in most country businesses is very thorough; in the three departments I have mentioned an apprentice (strictly speaking, they should probably be called "learners," as there are no indentures) gains a knowledge of the whole of the craft, and not merely one section of it; a tailor will spend his time learning successively under the vest maker, the trouser and breeches maker, and finally the coat maker; in the dressmaking, a girl would have a similar experience, being taken in turn through the making of skirts, blouses, bodices, and coats. We have always had a waiting list of applicants wishing to learn one or other branches of our business, even in the days when practically no wages were paid during the term of apprenticeship.

In conclusion, my objections to the Trade Boards, as we have experienced them, are that the system is not sufficiently elastic—that it does not allow enough variation between large and small places, and that, generally speaking, the minimum wage has been fixed far too high. Efficiency and not age should be the main factor in settling remuneration; particularly in the smaller places we have to deal with a number of cases that I might term sub-normal; they are not "deficient," but will never make an average worker.

It also seems doubtful whether the difficulties and problems of the small concerns receive sufficient consideration at the hands of the Boards as at present constituted, nor the effect of their policy on the countryside. It must be remembered that, apart from any other attraction, the larger centres will always draw the better workers, and that the smaller town has usually to put up with a second pick; taking the further fact that the turnover per unit of the staff is much lower in the country towns than in the cities, it is clear that the small business has need of the most careful consideration.

(Sgd.) EDWD. S. REYNOLDS,
Managing Director of A. Reynolds, Ltd.

VI. General Waste Materials Reclamation Trade.

(20)—Statement submitted by The Waste Paper Merchants' Association.†

Before we place in front of you our detailed views on the working of the Trade Board Acts, we desire to make it quite clear that this Association is not antagonistic to Trade Boards, but, on the other hand, is of opinion that with alterations, and, in fact, complete reconstitution, with due consideration to the views expressed in the following, that they, the Trade Boards, can be, and we hope they will be, so reconstituted that they can act with justice and equity to both employer and employed. We feel sure that with such a result attained, fewer, or, indeed, no industrial strife would occur, and this would be a great and worthy object to the everlasting benefit of the community.

Our trade, we contend, has never been, neither will we permit it to be, a sweated trade, the pre-war wages for women were 10s. to 14s. per week, whilst to-day the wages are from 17s. to 30s. per week of 48 hours. We are sure this rate of pay compares favourably with many other trades wherein the workers are much more skilled, our class of worker being mainly unskilled and of a low category.

We have to admit that at present we are not working at Trade Board rates, for the reason that the Waste Reclamation Trade Board of Great Britain have only recently sent their proposed schedule of rates forward to the Minister of Labour for signature. The schedule proposed has been and is the

† A statement setting out the special circumstances in which the trade is carried on in the South West of England and the difficulties anticipated as a result of the application of a flat national rate of wages in that area was submitted by the Plymouth and District Waste Material Association.

subject of many strong objections, mainly for the reason that a standard rate in place of a minimum rate has been proposed, and, further, that the voting was, we understand, Labour and Appointed Members "For," Employers' Section "Against." Such a decision cannot be called agreement but coercion, and should not be possible.

We desire to draw particular attention to the following points which, in our opinion, deserve the most careful consideration of your Committee.

Dealing with the complexity of Waste Materials Reclamation Trade Board (Great Britain), we give below details of the multifarious trades which have been grouped under this Board, and we intend to show that it is impossible for a Board of such a nature to deal satisfactorily and with equity and justice to either employers or employed in one schedule of rates of wages.

Here is the list of Trades:—

1. Scrap Iron and Metal Merchants (including Shipbreakers and Dismantlers).
2. Woollen Rag Merchants (for Textiles).
3. Rag Merchants (including Small Dealers).
4. Marine Stores (including Rag and Bone Shops).
5. Waste Paper Merchants and Exporters (including Small Collectors).

A comparison of each trade in relation to that of our own, namely, Waste Paper Merchants and Exporters, will, we think, you will admit, prove our contention.

Number 1.—The Scrap Iron and Metal Trade has no connection whatever with our own. The workers employed in it are skilled, particularly those employed as Shipbreakers and Dismantlers. The work is heavy, and, further, there are few, if any, women employed.

Number 2.—Woollen Rag Merchants deal chiefly in new clippings for the Yorkshire trade. The trade is centred in Yorkshire. The workers are skilled, and they are particular to that county. No connection whatever with our trade.

Number 3.—Rag Merchants deal with all classes of old rags, garments, industrial waste, and some clippings, which they send to Yorkshire to be re-handled. They do not act as Waste Paper Merchants, but as between Marine Stores and Waste Paper Merchants they are the medium of transfer to that trade, disposing of such material unsorted.

Number 4.—Marine Stores deal in any domestic and industrial waste usually associated with small shops, wherein the owner is very often the sole worker, the sorting of the goods being done over the counter as taken from the scale when purchased, such sorting being quite superficial. The connection of a marine store with our trade is purely that of a receiving centre for disposal in bulk to the rag merchants or waste paper merchants.

Number 5.—Waste Paper Merchants and Exporters deal in waste paper only, sorting, preparing and packing this material for British, Continental, and American mills. This trade has very little in common with the first four, their connection being so slight as to be practically negligible.

The most particular work in our trade is the sorting or separating one class of paper from another. It can therefore be claimed to employ mainly unskilled labour; certainly the lowest category of labour is employed. The value of our goods in comparison with the other four sections is undoubtedly the lowest. The work is very light but very regular, and we therefore claim that our trade should have special consideration in regard to the wages to be paid by a separate Trade Board, or a special section specially appointed to deal with the peculiar conditions which prevail in this trade as compared with the other four sections. We also consider that there is a great deal of inequity, and that it is manifestly very unfair for a Trade Board to fix rates of wages for the wholesaler and also for the retailer under the same schedule, or vice-versa. Each section of trade should have its own section of a Trade Board, and we therefore suggest:—

That small divisional Boards be set up in connection with the main Board to fix rates of pay and working conditions suitable to the sections of trade the divisional Board represents. Their decision may or may not be subject to the veto of the main Board, or, alternatively, that the Board be reconstituted entirely.

The Power of the Appointed Members.

We understand that the appointed members were originally nominated by the Board of Trade to act as conciliators, but according to our experience and knowledge of the working of the Waste Materials Reclamation Trade Board (Great Britain) the method of voting forces them into the position of arbitrators. As an instance we would mention that when a vote is to be taken (except it be an agreed decision) equality of members on each side must be obtained excluding the appointed members and chairman. Consequently it is the vote of the "Appointed Members" which decides every time and as a result each side uses their time in endeavouring to make the appointed members approve of their views and give them their support. In the case of the Waste Materials Reclamation Trade Board it appears to have been impossible for the employers' section to do this by reason of the fact that the two appointed members are collegians holding, we maintain, purely academic views based upon theory and not as it ought to be upon actual knowledge and practice of the trades upon which they are called upon to give a fair decision. From the information given to us it appears that the appointed members have a strong leaning in favour of the labour representatives and it cannot be expected that justice and equity or agreement can possibly be obtained through biased views.

We therefore have to propose that there be only one appointed member and that he shall be the chairman who shall act in a judicial capacity only. The appointment should not be academic and we suggest that suitable chairmen should be found in the following professions: Barristers, Solicitors, Actuaries and Chartered Accountants.

The chairman's decision should be binding, but subject to the confirmation of the Minister for Labour to whom objections or appeals should be addressed and to whom should be given the usual powers of confirming, declining to enforce, or referring back after due consideration. Voting could be dispensed with.

The Latitude allowed to Labour Representatives.

The Trade Board is supposed to consist of an equal number of employers' and workers' representatives in the trades, and two, three or four appointed members. In actual practice the workers are represented by professional trade unionists without the slightest knowledge, we believe, of the trades, their ability to pay the rates of wages, or any knowledge of the working or the economic conditions of the trades upon which they affect or attempt to lay down rates of wages.

It is common information that some of these workers' representatives sit on several boards.

We are firmly of opinion that it is impossible for any man to do justice between employer and employed unless he has specific knowledge of the fundamental conditions and actual practice and methods of the trade for which the Trade Board is set up.

No employer of labour would think of doing such a thing, as such a course would be fatal to his business and he would know he could not do justice. It simply means that such individuals are professional Trade Board members and worthy "jacks of all trades but masters of none." Such a thing cannot be good for the Trade Boards on which such members sit for the reason that their arguments must be biased by the views expressed in Trade Boards governing trades probably quite antagonistic and distinct from one another.

We therefore propose, "That no individual can be a member of more than one Trade Board and that only those with a knowledge of the particular trade should be appointed on either side."

Lack of Elasticity.

At present the methods employed are as follows:—

First the Board meets and after consideration propounds a schedule of rates of wages to be enforced.

Secondly.—A notice must be sent to every employer in the trade giving full particulars of the proposals which must be exhibited in his works.

Thirdly.—Two months are allowed for objections to be lodged with the Minister for Labour by either side.

Fourth.—The Board meets to consider the objections and finally decides to recommend the Minister for Labour to sign and make the rate operative which decision is duly published.

Five.—A month is allowed for further objections and consequently over three months and in fact nearly four months expires before a rate can be operative. This, of course, cuts both ways, but it is not equitable, changes may have taken place in trade, altering the whole aspect and positions as compared with conditions ruling at the time of the first proposal.

This point, is just as important to the worker as it is to the employer, as, in the event of a change taking place it must be recognised that the objection on either side would carry great weight with the result that the Minister would feel justified in returning the schedule to the Board for reconsideration with the natural consequence that the whole business must be gone over again. Therefore, logically it is possible for the life of a Trade Board to be spent in sending out proposals without getting one into operation. Our own Trade Board is a typical instance of this, it has been sitting for 16 months and yet finds that the objections to the proposed rates are so strong that they will most probably be referred back for revision. We therefore suggest:

That the Board having decided a rate, a short period be allowed for objections. The objections be duly considered and the Board have the power to revise the rate up or down as the facts may warrant and return to the Minister for confirmation and operation within 14 days. All rates should apply for a period of three months only, and that notice be given at the end of the second month that the Trade Board will meet on a given date in the third month when all objections to continuance of the then existing rates would be considered and all applications for revision, alteration or addition to the rates would also be decided. Such decisions or revised rates, if any, to be published and become operative as from the first week of the month following.

How the Proposed Rates affect our Trade.

With the impending imposition of uneconomic rates it has been impossible for us to contract forward as

is usual in our trade, as, should the rates come into force, there is no possible doubt that the trade would be financially ruined.

It has been particularly noticeable during the last few months that even the possibility of such rates as have been proposed has caused many employers in our trade to make an endeavour to protect themselves against the financial position which would undoubtedly follow with the incidence of such rates by re-arranging their staff and introducing a younger element to enable them to meet the rates when enforced without being absolutely ruined.

In our opinion many a good but slow worker will be penalised by the enforcement of such a schedule as has been proposed, and we think the evidence which we have mentioned as a positive fact is substantial confirmation of this; we are convinced that the rate which has been proposed is not a minimum but a standard rate and that it is actually impossible to bear.

We would remark that there are many other more skilled trades which are not called upon to pay such rates as our Board are attempting to fix.

We are of opinion and strongly maintain that it would be wise to reconstitute the Board entirely as follows:—

Chairman with judicial powers,

Three employers,

Three actual workers not in employ of above,

to form a court or tribunal, or divisional section of the Main Board, and to be subject to the veto of the Main Board as detailed by us earlier in these notes. We would also make it possible for evidence to be given or demanded by this Board from employers, trade unions, employees or others interested, and, as we have already described the powers which we would recommend be given to the Chairman, it is not necessary to repeat the same here.

Our reason for suggesting a small Board is that the present one is far too large and unwieldy; wiser men than us are in favour of small numbers for weighty and speedy decisions, and in support of this view we would remind you that not so long ago the Premier stated, we think it was in connection with the coal strike, "That with six we can get sense but with sixty we get madness."

Finally we desire to add that in view of the existing conditions it is in our opinion to the mutual interests of both employer and employed that the operations of the Act in so far as the present proposals are concerned should be deferred for a period of at least three months and preferably six months and shall then be reconsidered on the basis of the conditions then existing. We have sound reasons for recommending this course; they are: the financial instability of the trade following the terrible slump and the consequent inability of the trade to pay wages above subsistence rate, the present wages being quite fair, and the workers have expressed themselves quite satisfied with both the wages and conditions which apply.

For the Waste Paper Merchants' Association.

(Signed) P. N. RISKERY.

VII. Grocery Trade.

- (21) Memorandum submitted by the Wholesale Grocery, Provision and Allied Trades Employers' Association, 72, Robertson Street, Glasgow, and the Scottish Federation of Grocers' and Provision Merchants' Associations, 6, Castle Street, Edinburgh.

These two organisations together represent the entire body of wholesale and retail traders in groceries, provisions, tea, sugar, and eggs throughout Scotland. They nominated respectively the wholesalers' and retailers' representatives on the Grocery and Provisions Trade Board (Scotland), which nominations were duly accepted and confirmed by the Minister. They have been in close touch with

the proceedings on the Board from the beginning until now, and have together provided the link between the Board and the general body of wholesale and retail traders throughout the country. They are therefore in a position to submit an authoritative statement of the views of the trade generally, as well as of those of their representatives on the Board.

They desire respectfully to submit the following representations for the consideration of the Committee:—

ESTABLISHMENT OF BOARD.

1. The Board was established by the Minister on 1st November, 1920.

STATISTICS.

2. The number of businesses coming within the scope of the Board's orders is believed to be about 16,000, of which about 15,000 are in the retail section of the trade, and about 1,000 are wholesale establishments.

The number of workers under the jurisdiction of the Board is reckoned to be about 60,000, of whom

- about 3,000 are employed in "multiple" shops;
- about 8,000 are employed with co-operative societies, and
- about 49,000 are employed by the "private" traders, retail and wholesale.

The employers' side consists of 26 members, of whom

- 14 represent the retailers,
- 9 represent the wholesalers, and
- 3 represent the co-operative societies.

FIRST MEETING OF BOARD.

3. At the first meeting of the Board, held on 24th, 25th, and 26th November, 1920, rates of wages applicable to all workers in the trade, without distinction as to the class of work done, were proposed. These rates ranged from 15s. per week at the age of 14 years, to 72s. 6d. per week at 24 years, in the case of male workers; and from 12s. per week at 14 years, to 55s. per week at 24 years, for women workers.

EMPLOYERS' POSITION.

4. For various reasons, the rates proposed were not satisfactory to the trade as a whole; and in order to make the position quite clear it is perhaps desirable to state the circumstances under which the employers attended the first meeting of the Board. They had not had the opportunity of consulting together at any time prior to the meeting of the Board. The wholesalers and the retailers met each other for the first time immediately before the Board was opened, and saw the co-operative representatives for the first time at the Board itself. Most of the individual employers had no knowledge of the wages paid in the trade apart from those which they themselves paid to their own employees. Most of them, likewise, had had no experience of any kind as regards "collective bargaining" in the matter of wages, and few of them had ever seen, or had any dealings with, any trade union official.

Under these conditions, the employers found themselves unable to present any adequate statement of their case, with the result that the rates proposed were accepted as being the best that could be obtained for the time being.

PREPARATION OF EMPLOYERS' CASE.

5. The employers were, however, convinced that these rates were higher than the trade could possibly bear as a whole, and that if ultimately they became effective they would involve nothing less than disaster equally to the employers and the workers; and they, therefore, immediately after the meeting of the Board, set about collecting the material for the case which they intended to submit, for the first time, at the next meeting of the Board.

SHORT ACCOUNT OF BOARD'S PROCEEDINGS TO DATE OF LAST MEETING.

6. The objections taken to the proposals were chiefly on the grounds that they—

- (a) did not discriminate between the skilled and unskilled workers;

(b) did not allow for the varying conditions in the trade, as, for example, between the large city emporium and the small country store;

(c) the rates proposed were based solely on the age qualification, without regard to ability or experience; and

(d) the rates proposed for women were too high relatively to those proposed for men.

7. The objections received to the Board's proposals during the statutory period of two months were considered at a meeting of the Board held on 16th March. They numbered 2,396, and in view of this number it was decided to appoint a committee of the Board to go into the whole question in the light of the objections, and to report to the Board at a subsequent meeting.

8. The Committee reported to the Board at the meeting held on 20th, 21st, and 22nd July, and its report was favourable to the recognition of the principle of differentiation between skilled and unskilled workers, and also to the recognition of experience as a factor in the wages scales. The report was unfavourable as regards the provision of separate rates for different parts of the country, and it did not deal at all with the question of the relative proportion of women's wages as compared with those of men.

9. At the meeting of the Board held in July the employers had for the first time the opportunity of putting before the Board a properly reasoned statement of their views, and did so with some success. At that meeting proposals were adopted by agreement between the two sides providing for the division of Scotland into two areas, the first and higher area comprising the cities, towns, and burghs whose population was not less than 5,000, and the second and lower area the places under that level. The proposals also made provision for separate rates for (1) shop assistants, wholesale warehousemen, and clerks, these classes being recognised as skilled workers; and (2) porters and other unskilled workers. The women's rates were fixed (as regards the higher ages) at substantially two-thirds of the rates proposed for male workers. The range of the rates is set out below:—

—	Ages.	Area 1.		Area 2.	
		s. d.	s. d.	s. d.	s. d.
Skilled (Males) ...	16 to 25	15	0 to 57	6	14 0 to 52 0
" (Women)...	16 to 25	14	0 to 40	0	13 0 to 36 0
Unskilled (Males)	16 to 25	13	6 to 52	0	13 0 to 47 0
" (Women)...	16 to 25	13	0 to 36	0	12 0 to 32 0

It may be pointed out that the rate 57/6 for the skilled male worker of 25 years of age in Area 1 is precisely equal to the 72/6 rate proposed in November 1920, making allowance for the fall in the Board of Trade Index Figure from 276 to 220.

10. It should, however, be explained that it was agreed by the Board that, in view of the fact that the rates proposed would probably be in operation from January to June 1922, account should be taken of the position as it was likely to be in March 1922, the half-way stage of that period; and, accordingly, it was agreed that the adjustment should be made on the basis of an anticipated Index Figure of 200. The margin of 10 per cent. over the rate so arrived at, which was allowed for in the wages actually fixed, is regarded as a provision for the improvement of the standard of living of the workers.

11. These rates are considered by the employers—and presumably also by the Appointed Members and the workers, since they were carried by agreement—as being on the whole reasonable, and as fair as possible to both sides, and we think it may be claimed for them that they—

- (a) make some allowance for the essential difference between a Trade Board wage and a standard wage; and

- (b) make provision for a progressive allowance for the improvement of the standard of living.

12. The Board met on 26th October to consider the objections which had been lodged against its amended proposals. These numbered 119, of which 106 came from employers and 13 from workers. In view of the fact that the objections did not raise any new question which had not already been fully and exhaustively discussed, and considering also that they were comparatively so few in number, the Board felt justified in concluding that its proposals had met with the approval of both sides as a whole, and accordingly the rates were confirmed as they stood; and were submitted to the Minister with the suggestion that they should come into force on Monday, 2nd January 1922.

GENERAL STATEMENT OF EMPLOYERS' VIEWS.

13. It will be apparent, we hope, from the foregoing brief statement, that we have endeavoured consistently and sincerely to deal fairly with our workers all through these negotiations, and our aim has constantly been to make the Trade Board an instrument of good, and to use it for the benefit of the trade as a whole, both employers and workers. We consider that in this we have, after a long and arduous struggle, been successful to a certain extent; but we are equally convinced that the settlement we have arrived at, satisfactory as it is up to a point, is acceptable to and workable by only the larger and more prosperous businesses in the trade; and that for many of the smaller and less prosperous employers and their workers it will mean difficulties and hardships which will become increasingly apparent when the new conditions actually become effective.

We think it advisable that in submitting our evidence to the Committee we should make it quite unmistakably clear that the considered attitude of the trade generally throughout Scotland towards the Trade Board is that machinery of this kind for the regulation of wages in the trade is neither required nor desired; and the experience of the employers' representatives on the Board leads them to give their strongest support to that attitude.

The stated reason for the establishment of the Board is that "no adequate machinery for the effective regulation of wages exists in the trade." But in our view the fact that no such machinery existed is in itself the best and strongest evidence that the necessity for it had never been felt; and this is in entire accordance with our own experience as employers, having an extensive and intimate knowledge of the circumstances of our employees. The conditions in the grocery trade are not in any way comparable with those in the "sweated" trades, and the workers in the trade may be considered as being in every way capable of looking after their interests. Recourse to the ordinary organised method of dealing with wages questions, by the instrumentality of the Trade Unions, has been open to them for many years, and the fact that of the 60,000 employees in the grocery trade in Scotland not more than 10,000 are in the Unions is further evidence that the conditions of their employment generally are not such as to give rise to any acute feeling of discontent. Wages disputes in the trade have been infrequent, and strikes practically unknown.

We desire also to lay stress on the fact that the machinery of the Trade Board entirely changes the basis upon which wages have in the past been paid. From our experience on the Board we have a very acute sense of the many difficulties attending the construction of suitable rates, and we quite realise that in any scheme of standardised wages the age qualification must of necessity be the primary basis, for the sake of simplicity. But the older, and in our opinion the better, method, which has been followed in the grocery trade, has always been to pay wages according to the ability of the employee, and to the value of the services rendered; and the matter of age has only been a secondary and incidental consideration.

That in our view was by far the better method, because it provided the right incentive and the due reward to the worker of ability and aptitude, and thereby maintained at a high level the standard of efficiency in the trade. The effect, on the contrary, of instituting fixed rates of wages through the Trade Board, with the inevitable consequence of raising the standard for the less efficient workers, must necessarily be to bring about a more or less corresponding reduction in the wages paid to the more efficient workers. This result, with its consequential effect in lowering the general standard of efficiency, must, it appears to us, ultimately prove detrimental to the well-being of the trade; and with a full sense of our responsibilities as employers, and with a very strong personal interest in everything that affects the status of the trade, we are bound to say that we regard the outlook for the future with concern and apprehension.

REQUEST FOR REPEAL OF 1918 ACT.

The trade as a whole, with every respect for the opinion of the Minister, disputes with every possible emphasis the implied contention that the conditions as regards wages in the trade in 1920 were such as to call for the establishment of the Board, and desires to express in the strongest possible terms its hope that it may be practicable to repeal the Act of 1918, or to exclude the grocery trade from its application.

APPEAL FOR SUSPENSION AS ALTERNATIVE TO REPEAL.

14. If in the judgment of the Commission the repeal of the Act is not an immediately feasible proposition, we would urge that, having regard to the special circumstances of the present time, it is at any rate desirable that its operation should be suspended, pending the return to more stable economic conditions. The employers in the grocery trade have not been fortunate enough to escape the consequences of the world-wide disturbance and unsettlement resulting from the war, which have been so acutely felt in every industry in the country. During the period from November, 1920, until now, the trade has had to suffer very severe losses—losses so serious as to have brought the whole trade into a very precarious and even dangerous financial position. It cannot be said that the prospect for the near future, so far as we can foresee, holds any promise of less difficult conditions; and those of us who have the responsibility of conducting important businesses, upon whose prosperity considerable numbers of persons are dependent for their livelihood, feel that our greatest need at the present time is to be allowed to devote our whole attention to the task of bringing these businesses safely through these troubled times; and without the distraction of having to deal with new conditions which at the very least must necessarily involve some modification of the relationship which has hitherto existed between our workers and ourselves.

We urge the suspension also on the equally important ground of national economy, and in accordance with the declared and obvious necessity of reducing the national expenditure wherever possible. Our reckoning is that it has cost in all not less than £3,000 to bring our Board to the stage at which it is to-day. The cost of other Boards can hardly have been less, and in some instances known to us it must have been far greater. In our opinion the money might have been spent to more useful purpose in other directions, or, better still, not spent at all.

SUGGESTIONS FOR IMPROVEMENT OF MACHINERY.

15. If it should be decided by the Committee that as against the alternatives of the repeal or the suspension of the Act, the Trade Boards are to continue their work without interruption, we ask permission to offer some suggestions, based on our experience, which would, in our opinion, help the Boards to carry out their task with greater success. These are as follows:—

- (1) *The First Rates*.—In the first place, we would suggest that in the case of new Boards there should be a general recommendation made

to the Chairman and the Appointed Members that the utmost latitude should be allowed, and the utmost patience shown, in the discussions which precede the fixing of the first rates. Bearing in mind that, as in our own case, the employers are probably confronted with problems of an entirely novel character, and are probably utterly unused to dealing with the questions involved in collective bargaining with regard to wages, it is of the greatest importance, if costly mistakes are to be avoided, that every opportunity should be given to both sides to explore the whole ground thoroughly, having regard to the fact that the first rates fixed are the most important of all, inasmuch as they form the basis upon which all subsequent settlements must rest.

- (2) *Bargaining.*—Secondly, we desire to invite the Committee to express its opinion with regard to the process of "bargaining," which has apparently become the prevalent practice in the Boards. This is a method of procedure which has always appeared to us to be highly undesirable, and which has the effect of imparting to the discussions an atmosphere of unreality which is the reverse of helpful in arriving at a satisfactory settlement. It seems, for example, to be rather an absurd and futile and unbusinesslike proceeding for one side to offer a rate of 40s., and the other to demand a rate of 80s., when the figure which is really in the minds of both sides as a reasonable rate is somewhere in the neighbourhood of 60s.; and that figure ultimately arrived at, more or less, by the appointed members performing the simple operation of "splitting the difference." The danger involved in the practice is that where a side attempts to approach the question of rates from a different and more businesslike angle, it is apt to be punished for its temerity in thus departing from the recognised tradition of the Boards. We are firmly of the opinion that the practice is essentially bad, and prejudicial to the efficient discharge of the duties of the Boards; and if the Committee agrees we feel that the expression of its opinion would probably have the desired effect in putting an end to the practice.
- (3) *Appointed Members.*—We also desire respectfully to offer a suggestion with regard to the composition of the bench of Appointed Members. We are in entire accordance with the idea that the Chairman should possess legal knowledge and qualifications, and thus be able to bring the judicial type of mind to bear on the questions and arguments submitted to him. We also agree that where women form a considerable proportion of the workers in the industry, it is essential that one of the Appointed Members should be a lady who is interested in social and economic questions affecting the status of women. Our suggestion is that the third Appointed Member might appropriately and usefully be a gentleman possessing wide commercial experience, who would have first-hand knowledge of the general effect, from a business point of view, of proposals submitted to the Board, and who would be able to bring to the consideration of questions regarding wages something of the authority of an expert.
- (4) *Objections, and Duration of Rates.*—We wish also to submit that it would be of great advantage if wider powers were given to the Boards both in regard to the matter of dealing with objections, and also as regards the determination of the periods during which rates should be in force,

Under existing conditions it frequently arises that there is both on the employers' and the workers' sides a desire to give effect to some of the representations made to the Board by means of these objections, but both sides are deterred from carrying out their intention because of the circumstance that the effect of their action would be to bring about the necessity of re-advertising the whole proposals, with the consequent additional expense, and the further unsatisfactory two months' delay. Our suggestion is that in such a situation it should at least be within the province of the Board to put forward to the Minister the submission that in its view the amendment made is not such as to necessitate the re-advertisement, and leaving it to the Minister to exercise his discretion as to whether the Board's recommendation should or should not be acted upon. Similarly, we think that it should be permissible for a Board to recommend that, having regard to any exceptional economic conditions prevailing, as in fact they do at the present time prevail, it is expedient that the period during which a rate is to be operative should be shorter than the present statutory period of six months.

- (5) *Side Voting.*—We venture also respectfully to ask the Committee to recommend that the principle of side-voting should be adopted by the Board, in place of the practice at present prevailing of reaching decisions by means of the individual vote. The exercise of the single united vote by the side as a whole appears to us to be in entire agreement with the generally recognised democratic principle of majority rule, and in our opinion it requires no other or further justification. All sides, whether employers or workers, are made up of individuals representing more or less divergent interests, which in practice it is impossible to reconcile on every question of importance, and at the present time it is possible for even one member of a side, who holds a view in strong opposition to that of every other of his fellow-members of the side, to secure their defeat by joining his vote to those of the opposite side. We consider that such a power should not properly be in the hands of any single member or any minority of a side, and that where important questions of principle or policy have been discussed by the side, and a decision arrived at, that decision should be equally binding upon all members of the side.
- (6) *Co-operative Societies.*—We wish to call the special and urgent attention of the Committee to the anomalous position occupied by the representatives of the co-operative societies on the Board, and to ask respectfully that a recommendation should be made to the effect that these representatives should be withdrawn from the Board. This request is put forward by us entirely on the ground of the principle involved, and without reference to any question of the personal relations existing between the co-operative members and the other members of the employers' side. We have the highest esteem for, and the friendliest relations with, our co-operative colleagues on the Board; but at the same time we are most decidedly of the opinion that their presence on the Board at all is entirely wrong in principle.

It is no doubt true, as has already been admitted by us, that "no adequate machinery exists for the effective regulation of wages" in the "private" section of the trade: but that condition certainly

does not apply to the co-operative societies, which, on the contrary, are highly organised both as employers and also on the workers' side. They have District Wage Boards and Central Wage Boards, which discuss and settle all questions regarding wages which arise between them and their workers. They have therefore no direct interest whatever in the rates of wages fixed by the Trade Board, and the wages so fixed do not affect them in any practical manner in the very slightest degree. Their position on the Board, therefore, is simply that of spectators, or that of additional Appointed Members, whose presence adds a further complication to a task which is already quite sufficiently complicated. Without any responsibility for the protection of any interest of their own in the discussions of the Board, they are in effect in the position of being arbiters on the wages to be paid in the trade of which they themselves constitute only one-eighth part, and actually wield a power of control over those wages greater than is possessed by the private employers who represent the other seven-eighths. Such a position appears to us to be wholly unjust, and if our Board is to be continued we hope a remedy may be found in the withdrawal of the co-operative element from both sides of the Board. As compared with the private section of the trade, the conditions under which the co-operative societies carry on their business, their relationship with their customers, and the working conditions of their employees, are all on an entirely different footing, and little or no analogy exists between the two sections of the trade. Under these circumstances and for the reasons given, we are strongly of the opinion that the co-operative representatives are not properly qualified to occupy the position which in effect they do occupy of being the judges of the appropriate rates of wages to be paid by the private employers, whose interest in the trade is by far the preponderating interest, to their own employees. We venture to hope that this view will commend itself to the Committee as being entirely fair and reasonable, and that the Committee may consider it fitting to make a recommendation in conformity therewith.

- (7) *Composition of Board.*—We ask leave also to add one or two suggestions with regard to the composition of the Board:—

(a) *Reduction of Personnel.*—We think it would be of decided advantage, from the point of view both of efficiency and economy, if the number of members were reduced to a total of 27, i.e., 12 members on each side, with 3 Appointed Members instead of the present membership of 55. The Prime Minister himself has borne very vigorous testimony to the effectiveness of small bodies in getting things done; and by virtue of our own experience we have the strongest reason for sharing his view, as progress towards a settlement on our Board was only achieved as a result of the appointment of a small committee of six members from each side, acting with the Chairman. By this means we get rid of the "speeches" which constitute more or less an obstacle to the emergence of a satisfactory arrangement, and are able to settle down quietly to the discussion of

practical questions in a business-like way.

We quite appreciate that the purpose of the Minister in appointing 26 members to each side was to secure the due representation of every important interest in the trade, but we are convinced that this condition can be satisfied no less effectively by the smaller number suggested by us; while the gain as regards economy is obvious.

- (b) *Limitation of Proportion of Professional Representatives.*—We

suggest also that in order to preserve the true character of the Board as a conference between employers and workers actually engaged in the trade, it is desirable to place a limit on the number of professional representatives on both sides; and our view is that this element should be restricted to not more than one-sixth of the total number of members on each side.

- (c) *New Members.*—While we have no desire or intention in any way to invade the province of this Minister, we think that the names of new members of the Board might appropriately and with considerable advantage be submitted to the Chairman of the Board before the appointments are confirmed by the Minister.

- (8) *One Board for Distributive Trades.*—We understand that the suggestion is being made in some quarters that it is desirable that all the distributive trades should be brought together within the scope of one single Trade Board. We are unable to share this view, and we do not consider such a scheme to be in any way practicable. If the Trade Board system is to be continued, we are of the opinion that the duty of fixing wages for any particular trade may best be entrusted to the employers and workers actually engaged in the trade concerned. As employers whose interests are wholly centred in the grocery trade, we do not feel competent to contribute usefully to the settlement of rates of wages appropriate to other trades, nor should we consider that employers and workers in other trades were any better qualified to fix wages suitable for our trade.

The Scottish Grocers' Federation desires to refer to some further questions which more specifically affect the retail side of the trade:—

DEFINITION OF "GROCER."

1. We wish in the first place to suggest that the definition of the term "grocer" adopted by the Minister is in some respects defective; and we think it would be of considerable advantage if it were remitted to the Board to furnish an amended and simplified definition of its own for the approval of the Minister. It appears to us that this duty which might with the utmost propriety be entrusted to the Board as the representative of the trade which is itself most directly concerned in the provision of an adequate and correct definition.

The definition existing at the present time brings within the scope of the Board all shops in which the principal business done is other than that of dealing in groceries, but in which 12 or more of the articles specified in Schedule 1 are sold in the shop or in any department thereof. It is therefore possible for traders whose main business lies in other directions to

sell 11 articles, which may be 11 of the most important articles constituting the business of the grocer, and yet be free of all the restrictions and responsibilities imposed upon the actual members of the trade by the Trade Board. This position appears to us to be manifestly unfair and unreasonable, and we venture to hope that the suggestion which has already been put before the Minister by the Board to the effect that the number of articles thus dealt in by other traders should be restricted to five, will meet with the sympathetic consideration and support of the Committee.

LIMITATION OF HOURS OF BUSINESS

2. *Sunday Trading*.—We also desire to suggest that the powers which under existing conditions are vested in the local magistrates, to fix and limit the number of hours during which the shops engaged in the trade may be open for the transaction of business, should be transferred to the Minister; and that it should be within the scope of his functions to institute and enforce a Closing Order, upon the application or the recommendation of the Board. It appears to us that the limitations on the freedom of those engaged in the trade, which are necessarily imposed by the Board through its Orders, should in fairness be equally applicable to all its constituent members, whether or not they are "employers" in the legal sense. The provision which we suggest is in our view absolutely necessary for the protection of a considerable number of traders, owning small businesses, who would otherwise be subject to unfair competition on the part of their more fortunate neighbours; and also in order to curtail Sunday trading, the extension of which we note with grave concern.

FAMILY EMPLOYMENT.

3. We wish also to suggest further, and for the same reason, that in the case of businesses which are carried on by the owners by means of labour supplied by a member or members of their own families, there should, in default of a definite contract of partnership, be a presumption that the ordinary relations of employers and employed subsist, and that the Orders of the Board should in all respects accordingly be applicable to such businesses.

SPECIAL PROVISION FOR SEASIDE RESORTS.

4. We consider that it should be within the power of the Board to make, or to recommend to the Minister to make, special provision to meet the special difficulty of those traders whose businesses are situated in localities which are subject to very considerable "seasonal" fluctuations in the volume of their trade, as in the case of traders in popular seaside and other holiday resorts. The strict application of the conditions attached to the Orders of the Board, without relaxation of any kind, would undoubtedly press with undue hardship upon such traders and their workers; and we are of the opinion that it would be in the best interests of both sides that some adjustment should be made to meet the special requirements of their position. It would, in our view, be a matter of no insuperable difficulty for the Board to devise by agreement a scheme which would operate with fairness both to these employers and their workers, and equally with fairness as between these employers and the general body of their fellow-employers throughout the country. We think the case might be met by broadening the exemption powers of the Board under Section 5 (3) of the 1918 Act.

CONCLUDING STATEMENT.

5. We desire finally to express our sincere and well-founded conviction which it appears to us we cannot emphasise too strongly that in view of the great complexity of the grocery trade on its distributive side, and having regard equally to the great variety in the classes of workers, which are very imperfectly provided for by the broad system of classification which it has been necessary for our Board to adopt, the Trade Boards Acts, however appropriate and effective they may be in their application to manufacturing trades which are confined within a certain more or less limited and well-defined compass, is by no means equally susceptible of application to our trade, with all its many ramifications. We venture therefore to hope that it may be possible for the Committee, as the outcome of its deliberations, to decide that it is desirable, if not that the 1918 Act should be repealed, that at any rate the grocery trade should be excluded from its operation; or failing this, having regard to the particular exigencies of the times, the whole system of Trade Boards may be suspended until economic conditions have returned to something approaching normality.

Reference has already been made to the expenses incurred both by the Government and the trade itself in bringing our Board to its present stage—expenses which in our view are not in proportion to the results which have so far been attained. It appears to us that there is little prospect of the expenditure being diminished to any important extent, apart from the economy which we have ourselves suggested in the proposal for the reduction of the personnel of the Board. The expenses of the administration of the Orders of the Board would probably be found to be not less great than the expenses of their preparation, especially if an adequate system of inspection is to be instituted, as we believe will be necessary. We have, naturally, a high conception of the honour of the trade, but we are afraid it may be necessary for us to admit that there may be in our trade, as in all other trades, a certain number of employers who will obey the regulations of the Board with less scrupulous care than the majority; and if the system of inspection is to be effective we think it will require to be considerably more thorough than the two per cent. proportion mentioned by Mr. Wolfe in his evidence before the Committee.

We are all, as employers, as business men, and not less as citizens and taxpayers, very earnestly convinced of the urgent and imperative necessity of the strictest economy in every direction during the present exceptionally difficult times. We suggest with all respect that this is not a propitious moment for an adventure into new experiments whose value as yet remains to be proved; and we venture accordingly to repeat the expression of our hope that it may be decided to suspend the operation of the Act for a time, as an alternative to the repeal of the Act itself, if the latter course should not be immediately practicable.

But if, on the other hand, it is decided, as the result of the labours of this Committee, that the Trade Boards are still to continue their work, we are strongly of the opinion that the adoption of the various suggestions which we have put forward in the evidence submitted would have the effect of making our Board and other Boards much more efficient instruments than they are at the present time; and would give them the opportunity of rendering a much greater and more valuable service, not only to the employers and workers in the various trades concerned, but also to the nation itself.

(22)—Statement submitted by the Glasgow and West of Scotland Licensed Grocers' Association.

OPPOSED TO TRADE BOARD.

The licensed branch of the grocery trade has all along been opposed to the principle of a Trade Board for their business. They originally understood that they had satisfied the Minister of Labour (Sir Robert

Horne) that the licensed trade, both off and on branches, should be exempted from the Trade Boards Act and indications were given by the Ministry of Labour that the case for exemption was all right. Through some influence or for some reason

not disclosed to this Association the proposed exemption appears to have been rescinded or at any rate reconsidered. The circumstances which impressed the Ministry of Labour in favour of granting exemption exist to-day probably stronger than they did when exemption was recognised as appropriate.

PRINCIPAL ASSET OF LICENSED GROCERS' TRADE.

Until the last month or two the principal asset of the licensed grocers' business—bottled whisky—has been controlled in price, say, 12s. 6d. per quart bottle retail 30 under proof, the control price giving a margin of only 8½ per cent. or 1s. per bottle gross profit to the distributor, out of which all charges had to be met, rent, rates, and taxes, wages, &c. It is true that control ceased with the termination of the Board of Control (Liquor Traffic) and the Food Ministry on the 1st day of September, 1921, but the prices of the wholesale to the retail have been stereotyped at 11s. 5½d. per bottle 30 under proof same as during control and no change has been made since, although retailers have urged time and again on their wholesale merchants for an increased margin of profit, only to be told that such could not be granted during the continuation of oppressive excise duties, and their repeal or modification is in the distant future. These amounts on a bottle of whisky to 8s. 6d., the current retail price being 12s. 6d. as stated, and out of this 4s. margin the retail distributor receives 1s. for his share being 8½ per cent. only as before stated.

On the face of it how can a Trade Board fix minima scales of wages upon a trade whose whole principal item of profit is as stated. The retail licensed grocer has no bulk whisky trade. Minima scales of any kind on a trade with a nominal profit on its main item of sale obviously at once leads to unemployment. The retail licensed grocer must be left free to pay a fair and reasonable wage to his employees, accordingly, even the reduced scales now proposed by the Grocery and Provision Trade Board for Scotland as minima for male and female workers in the present circumstances must be regarded as minimalist.

PROVISION DEPARTMENT.

Other witnesses will speak more particularly as to the provision department, but even in that section the opinion of this Association is that there is no call for a Trade Board with its cast-iron conditions as to hours of labour and rates of remuneration.

HOURS FOR LIQUOR.

The hours of sale under the Licensing Acts are in Scotland as in England, eight hours divided into a forenoon and an evening session starting at eleven with a two hours' break after twelve o'clock. No one can say that that is other than an easy day for a shopman with only intermittent calls by customers for his attention.

HOURS FOR PROVISIONS.

The Shop Hours Act regulates the provision branch hours; generally speaking the shop opens at 8 o'clock and closes at 7 with two hours off, one and a half hours for dinner and half an hour for tea. There is also the compulsory weekly half-holiday which in Glasgow takes place on Tuesday from 1 o'clock, and this hitherto has operated in both sections, dry and liquor, i.e., the grocer closes his shop. That gives a working week of fifty-two hours. Employees are so far as the employers are aware satisfied with these hours. They are a great advance on what used to formerly prevail in the trade, and in the opinion of this Association they are fair and reasonable and give no ground for complaint. The employers are entirely opposed to the introduction

of any principle of overtime, or to any further shortening of the working week.

The Shop Hours Act and the Licensing Act are sufficient protection of a reasonable day's work, and it must be kept in view that while in towns seasonal trade may not be so pronounced as at coast and certain country holiday places, there are fluctuations, busy times at certain seasons, and slack times when customers are away in their summer quarters. Accordingly, a little extra pressure or an occasional half-hour's longer work at, say, the Glasgow Fair and at New Year season are more than compensated by the slack business and easy time during the summer months, particularly the months of July and August, during which employees get their own holidays of 10 to 14 days on full pay.

The nature of the employees' duties are obviously not onerous; parcelling up goods, noting down orders, and chatting to customers is not in any way comparable to the physical strain of a mechanic's or other industrial worker's day to which Trade Boards Acts apply. Besides, customers come and go mostly at certain hours, and for considerable sections of the day the employees are to all intents and purposes idle and resting, the very reverse of the conditions in sweated industries, which created the original outcry for some form of Trade Board for protection of workers.

WAGES.

As regards wages, it may be said that as a matter of fact the scales of wages proposed by the Grocery Trade Board as minima are more than exceeded in actual practice by licensed grocers, but then there is freedom of contract between master and servant. The employer can pick and choose his staff, and the employee his shop. The best men and the hardest workers get the best pay, and the incompetent and the slack are paid according to their merits. The cast-iron Trade Board wage would involve the discharge of such employees, and the retention of the best, mostly young and active, and it must be kept in view that there are many old employees and some not too robust, whose conditions are respected by the employer and who are paid on the basis of the services they render. These would all fall out under a cast-iron compulsory Trade Board scale. In short, it is to the mutual advantage of employer and employee that even on the question of remuneration there should be no Trade Board fixed scale.

NO STRIKES.

The remaining point that may be emphasised is the total absence of strikes in the licensed section of the grocery trade. There have been one or two exceptional instances of establishment disputes, but these resulted from special circumstances of the particular establishment, and were not of general interest to the trade, and did not extend thereto.

AMBITION OF EMPLOYEES.

The ambition of the ordinary intelligent, smart working licensing grocer's assistant is to ultimately get a licence for himself, and become a master, and the employers are recruited almost entirely from the more intelligent of their own employees.

NO PROPOSALS TO IMPROVE TRADE BOARDS.

So far as the Glasgow and West of Scotland Licensed Grocers Association is concerned, they are making no proposals for betterment or improvement of the Grocery Trade Boards, as they are utterly opposed to a Board in reference to their own business, for the reasons that have been emphasised in the foregoing Memorandum.*

* A statement relating to the Grocers' trade in Scotland was also submitted by the Scottish Provision Trade Association (an independent organisation), setting out general views on minimum wage legislation and criticising the proposals and constitution of the Scottish Grocery and Provisions Trade Board.

(23)—Statement submitted by the South Wales and Monmouthshire Council of Grocers' Associations.

1. THE WORKING OF THE ACTS.

A. Wages by reference to age.—The system of fixing wages according to age has led to a lack of

initiative in the standard of efficiency, and the results will have a far-reaching, adverse effect upon the trade. In the distributive trades especially the

position must inevitably put an end to the considerations of merit-efficiency and experience which should be paramount in the mind of the employer when offering wages to an employee. Inefficient workers will not trouble to make themselves efficient, and in certain trades many employers have become disinclined to take juniors and train them as learners—the same considerations applying to ex-Service men now anxious to become skilled in the trade. Our trade has its full complement of dull or slow workers, for such men are to be found in every grade of life, and these—many of them old men—are being dismissed. Although they are worth—and have been paid—a living wage, they are not worth the wages purposed by the Board. Such men are largely employed by the grocer, having sufficient business to employ one or two assistants, and the tendency of these employers to replace them by boys earning the lowest possible rate of wages—who in turn will be dismissed—unless exceptionally smart, when their birthdays remind the employer of the higher rate payable. This mode of fixing wages will make it extremely difficult for new-comers to enter the trade, as not only will they and also those thrown out of employment, not be worth the prescribed wage, but will be prevented by the Acts, from being paid less. The ranks of unemployed are not only in danger of being swelled, but any chances of employment which may now be existent in the trade will certainly be eliminated.

It is urged that human nature being what it is, such a system will tend to destroy ambition and lead to a lack of application on the part of the employer, and the inducements which hitherto have been held out to industry and ability will be almost entirely uprooted. The net result likely is that in the very near future the country will suffer from a more or less dead level of mediocrity and a serious shortage of skilled labour.

B. Person.—It was understood when the Board was constituted that the five appointed members were included for the purpose of protecting the interests of the consumer or general public. Although these members are very excellent social workers, and possessed of high academic qualifications, they have no trade covered by the Board nor of the practical technical or practical knowledge of the particular economic relationship of that trade to other trades. For such members to have within their hands the tremendous power which they possess, as constituting the majority on either the employer's or the worker's side of the Board as they think fit, is, it is submitted, unfair and unsound in principle. Experience, it is contended, has shown that the institution of such members is inexpedient, and that their functions have not been properly exercised.

C. Administration.—With regard to administrative matters, it has before been urged upon the Committee that "although the voting is quite independent, the workers always vote as a unanimous body, and that the result is that the interests of the whole of the trade may be placed in jeopardy by the vote of any single employer." This is unfair.

As to interpretation of the Board's Orders, the present practice of the Minister of Labour in giving gratuitous advice to the public is considered a wrong one and contrary to the principles laid down by the Legislature in other Statutes.

D. Classes of Trades.—It is submitted that the existing provisions of the Acts are utterly inadequate to provide for the peculiar constitution of the Distributive Grocery trade. In this district the retail trade is capable of being classified as follows:—

1. Co-operative Stores.
2. Multiple Stores.
3. Central Private Stores.
4. Outer Private Stores.

The last class includes a large number of shops which employ no assistants, and the owners of which are chiefly miners, who attend to the business of the shop after their seven hours per day at the colliery—their wives or children attending in the meantime. The nature and character of trade of each class above

named does not to any great extent vary. Many grocers are also bakers, and those who are not sell bread and sometimes confectionery. Some sell butchers' meat, and nearly all deal in millers' offals, cattle food, ironmongery, hardware, oil and colours, mats, rugs, cooked meats, wines and tobacco. Some, too, in greengrocery, china and glass, drapery, beer and spirits, patent medicines, fruit and vegetables, fish, game and poultry, and there are also those who also carry on post offices. On the other hand, other distributive trades sell the more saleable articles of grocery and provisions, and the competition of the many local street traders (who are free from the burdens of rent, rates, taxes and wages) is seriously affecting the local shopkeepers. It will be seen, then, that the trade is inseparably intermixed with other distributive trades, and if the Order includes many persons not within the trade, the inequality of footing of the competing tradesmen surely makes the application as it is at present both defective and unreasonable. The divergent awards of the Trade Boards for various classes of trades can only result in one "Trade Board being played off against another by ever-varying rates which have no relationship to the economic situation of the different sections of what is generally recognised as one trade," and it is contended that inevitable unrest and strikes will follow.

E. Bureaucracy.—A protest is hereby made against the continuance of the incurring of large costs in working such a scheme of Trade Boards which has proved itself, in our opinion, impracticable by light of the present-day circumstances. The national need for strictest economy well justifies the abolition of what has aptly been termed "a bureaucratic pest."

F. Hours.—The Board's proposal to apply to the trade a 48-hour week is a condition which cannot be fulfilled without doing great injustice to the consumer—the workers and the trade. "The needs of the consumers, and particularly those of the industrial classes of the district, cannot be properly provided for unless provision shops are open and facilities for purchasing supplies are available for at least 52 hours per week. The work of a grocery store cannot be satisfactorily carried on unless the hours of the staff synchronise with those during which the place is open for the serving of customers. Therefore to base a standard wage upon a 48-hour week for grocery employers is impracticable, and must court trouble for all concerned in the carrying out of any Order which may be made regulating conditions of labour in the trade." This district, impoverished and reduced by the coal strike and by extensive unemployment, cannot stand the burden of the proposed rate of wages, apart from the burden of overtime above 48 hours per week. The retailers' week at present averages from 52 to 56 hours.

It will be remembered that in an above-written paragraph (D) a class of trader is referred to who employs no assistants, and whose family attends to the business when the shopkeeper is following his regular employment of mining or other occupation. Within the Statutory limit, such shops are open at all hours of the daytime. If the proposed hours are established the central stores could not hope to compete with the class of trader whose shop is usually a converted house situate in a street of dwelling-houses, and to whom the local housewives may run with the assurance of finding an open shop.

The prevailing occupation of the district is mining, and owing to the hours at which the miner goes to and returns from work, at which he spends seven hours a day, the shopping for the family is done towards the late afternoon or early evening. This tendency to later trading will become still more acute when the miner returns to his eight-hour day. It may be parenthetically mentioned that in the opinion of the miner of this district, this change will take place in the near future. This has already been the experience of the tradesmen of Llanelly, where the tinplate workers have reverted to the eight-hour day. The Bakery trade will probably soon have a 54-hour week.

It is desired to point out to the Committee that in no branch of the distributive trade is a worker required to display the same degree of physical exertion or work under the same conditions as the work of the miner, tipler, chainmaker or steel worker involves.

A 48-hour week is entirely abnormal to the trade, and the minimum number of hours per week cannot be less than 52.

G. *Wages*.—As to the proposed scale of wages. The present proposals were issued in August, but the cost of living has since fallen from 122 in August to 103 at the present time—a drop of 19 points. If the precedent of issuing fresh proposals because of the fall in the cost of living is to be followed the obvious result will be that upon each material fluctuation new proposals, new objections and advertisements will have to be made. The proposals of August last, even if fair then, which to the South Wales area were not, certainly cannot be fair now.

Such a system as the history of the Board shows is not only cumbersome and costly, but defective in many material respects.

The proposed scale, it is submitted, even if found applicable in some districts, cannot be applied to the trade in South Wales. The wages of workers in trades dependent on the main local industries should bear some analogy to those of the workers of such main industries. In South Wales the chief industries are mining, metallurgy and shipping. The following shows the present and former rates of wages for miners and other colliery workers.

The large reduction in wages of the chief industries has its effect on traders by a corresponding or even greater reduction in the spending power of the people, and this results in a consequent reduction of a trader's turnover and an increase in overhead charges which are based on turnover. An illustration of low wages may be taken. At Messrs. Baldwin's Steel Works at Port Talbot the average wage is about £2 10s. per week for the ordinary occupations at the works, but out of this have to be deducted £1 1s. per week for rent, health and unemployment insurance and trade union's subscriptions, leaving about 24s. to 26s. for maintenance of the family. These figures are significant, inasmuch as the conditions of the mine workers—conditions of employment (*e.g.*, no work and no payment during slack times), the degree of physical labour involved in the work and the high state of the miner's organisations—greatly differ from those of the grocery worker. (The grocery worker is, of course, paid a regular wage during slack and busy times alike, and he is always regularly employed.) The whole of the proposed scale is greatly in excess of the scales of wages paid in the chief South Wales industry (mining), and this will certainly add to dissatisfaction amongst other workers. The miners' leaders have recognised that only increased production by the miner and reduction in the cost of producing the coal—which latter can be partly accomplished by lower wages in the industry—can reduce the price of coal and create the demand for British coal which brings in its train a host of results beneficial to the nation.

In fixing wages for all kinds of employment regard is had chiefly to the cost of living, and if an industry cannot bear the wages compulsorily imposed upon it the employers have either to close down or place the increased burden upon the article produced or distributed. This means that the consumer has to pay, and the result is that as each circuit is completed the cost of living again and again goes up. It is submitted that, particularly in South Wales, the trade cannot pay the proposed rate of wages at the present time owing to the low financial state of the grocers in that area.

"In an interview with a Press representative in London last night, Mr. Vernon Hartshorn, M.P., said:—'The coal industry was never worse. For the owner the situation is not much better this month than last, because there is no subsidy.'

"Take South Wales as an example. There are 20 grades of men, or 40,000 miners, entitled

to 6s. 5d. a day only. On an average they are working four days a week. They will receive £1 5s. 8d. a week. If they were unemployed and had a wife and four children they would get £1 9s.'"

It has been shown above that the wages of the chief industries are exceedingly low and families are living practically a hand-to-mouth existence, and the widespread unemployment—the effects of this last coal strike, which has left the trade and, indeed, the whole area, reduced and impoverished—the fact that many grocers parted with stocks upon the pledges of the Miners' Federation which are at present irredeemable—the heavy fall in prices of commodities and consequent forced cutting of losses—the nearly impossible burden of District and Poor Rates and other taxes (the rates—Poor and District—vary in most towns of the South Wales Area from 28s. to 35s. in the £. For instance, Pontypridd has a rate of 30s. and Bedwelty 35s. for the current half-year)—all join in weighting the depression now hanging so heavily over the trade. The imposition of the proposed scale will be the last straw, and ruin and bankruptcy—now perilously near—will descend with devastating force upon the trade, wiping out the smaller man, crippling the resources of the survivors, and spreading great unemployment.

Perhaps a comparison of the scale in a schedule issued in November, 1919, by the Shop Assistants' Union with the proposed rates will be enlightening, because the Assistants' Unions' demands rose to very much higher figures upon the constitution of the Board.

The following are extracts from the 1919 Shop Assistants' demands:—

Assistants:		16	20	21	28
Age.					
Men	...	24s.	40s.	45s.	66s.
Porters	...	...	40s.		

The trade positively cannot pay.

The following are some opinions on the industrial situation of South Wales which have appeared recently in the Press:—

"Mr. A. J. Cook, miners' agent for the Rhondda and a member of the National and South Wales Executives, in an interview expressed the opinion that the South Wales coal-field is within measurable distance of another general stoppage.

"The grave industrial situation in the coal-field," said Mr. Cook, "is that, owing to further notices being given, involving the closing down of more collieries in the Rhondda, the whole of the workers in the industry will be compelled to consider seriously the necessity of stopping work altogether. The men were hoping that with the wage down to the minima there would be more work and fuller employment for them at the collieries. There were also hopes that with larger sales the pits would soon be working full time, and this would bring an increased wage.

"What has happened is this: Buyers, having obtained coal at lower prices, are now withholding their orders for the purpose of forcing coal to lower values. The men now see that there is no hope of either higher wages or more work, and, knowing that they cannot earn sufficient to live upon when at work, they have to go further into debt to maintain any sort of existence; they will stop work and fall upon the public funds for support until such time as the industry can pay them a living wage."

"The industrial outlook in the Rhondda is becoming more gloomy. The 14 days' notice served upon 2,500 men employed by the Lloekets Merthyr Colliery, Mardy, and 1,500 men employed at Messrs. D. Davis and Sons in No. 8 pit, Tylorstown, and No. 4, Ferndale, and one district of No. 9 pit, Ferndale, have expired, and the men are all idle to-day.

"At Mardy the miners have brought up their tools. During the last fortnight efforts have

been made to arrive at an agreement between the employers and the men whereby the pits would be kept going, but so far no results have been arrived at.

"The inhabitants of Ton Pentre district are also much concerned to-day with the news that the whole of the men employed at Messrs. Cory Brothers' pits at Gelli, Bodrington, Pentre, Tydraw and Tynybedw, numbering 3,500, have received 14 days' notice to terminate contracts.

"It is understood that the notices also apply to officials and members of the staff.

"At the Fernhill Colliery, Treherbert, which has been closed down for several weeks, the situation has improved, for a restart has been made at No. 4 pit, and nearly 300 men have been given employment."

"Approximately 1,000 men employed at the Mardy and New Duffryn Collieries, Rhymney, have received 14 days' notice to terminate contracts."

"Everywhere in the Welsh valleys there is acute distress. No fewer than 50,000 miners are unemployed. Many more are working short time, and still thousands of others on the lowest wage scale cannot earn enough in a full six-day week to provide their families with sufficient food.

"Shopkeepers and co-operative societies have nearly reached the point when further credit must mean bankruptcy.

"Boards of Guardians are plunging deeper and deeper into debt. Rates are rising to an intolerable figure.

"All this implies human privation which can hardly be measured, and, worse still, a process of both physical and moral degeneration.

"The disaster has fallen upon Blaينا, Nant-y-glo and Brynmawr in its most concentrated form.

"But in the Blaينا valley 3,000 men and youths—the breadwinners of nearly two-thirds of the whole population—have been unemployed since February.

"The majority have been out all the time. Some have worked and idled alternately as certain collieries have closed down and reopened, but the total number of unemployed has remained constant at about 3,000.

"The supreme tragedy for men of the Blaينا district is that two of the four collieries which are now closed will probably never be reopened. And the men are rooted to the valley.

"The distress is not paraded. The men are well dressed—about the only thing left from their wartime prosperity.

"They would be desperate if they lost heart," an official declared.

"As a matter of fact," he added, "the fathers and mothers are pinching themselves. With two meals a day, provided by the education and relief authorities, the children are escaping pretty well, but the adults are having a hard time.

"They are holding on to clothes and furniture as long as they can, but some are now forced to sell things to buy food.

"Consequently the existing conditions in these hovels, with poverty and sickness added to congestion, are appalling beyond words.

"Many people try to keep their wretched situation secret, and go to the Guardians for relief only when they are actually driven by hunger, so that the most tragic histories are known only to doctors, ministers and teachers.

"To-day a man and his wife walked ten miles from Aberillery to the meeting-place of the Guardians at Tredegar to relate how they had been turned out of rooms because ten months' unemployment had made payment of rent impossible."

2. APPLICATION OF THE ACTS TO THE GROCERY TRADE.

The reason, and only reason, given by the Minister of Labour for the Order bringing the Trade within the Acts is "that he is of the opinion that no adequate machinery exists for the effective regulation of wages throughout the trade." The Order was, in fact, made upon the application of the workers only, and not of employers. It is submitted, in the words of Mr. Cahill, "that no Trade Board should ever be set up in any trade unless that trade is sufficiently organised to receive and accept it, and that the best test of whether the traders so organised is the application of the Trade for the institution of the Board." Except in sweated trades, it is maintained, no Trade Board should be set up except upon the application of a proper proportion of employers and workmen. The Act of 1909 was enacted for the purpose of putting an end to sweating, and it cannot be charged against the Grocery Trade that it has ever sweated its employees. It has been before put to the Board "that there is not the slightest comparison between the workers in the Grocery Trade and the home and out workers of the tailoring and certain other trades. The operations of the employees are carried out in public, its retail shops are visited by the public and by Food, Sanitary and Shops Inspectors, and the nature of the conditions of assistants is well known."

When a rate is fixed it is binding on the employers but not binding on the workers, and it is the experience of the local Trade that immediately the wage rates were fixed the workers (being here well-organised) through their Unions agitated for higher wages on the ground that those fixed by the Board were minimum rates. Up to that time there had been but little unrest and no strikes had occurred. However, considerable unrest and possibly strikes will inevitably follow this attitude of the Unions.

It must be reiterated that the constitutions of the Grocery Trade, being what it is, does not lend itself to the system of Trade Boards, and the divergent awards which must occur of the various Boards in dealing with trades with which the Grocery Trade is so closely associated will be a source of trouble and unrest in the very near future.

3. SUGGESTIONS.

Before making suggestions for the amendment of the Acts it should be understood that it is the considered opinion of the South Wales and Monmouthshire Council of Grocers' Associations that the whole system is unworkable; that the Acts follow the wrong principles; that the Acts are not properly administered; that a great evil is done in sweeping away the free and smooth working relationship between man and master which was formerly existent. For these and other reasons given in this statement, the Act of 1918, to put it shortly, is not wanted, and regard being had to economic situation of the country, the burden and cost of the defective system sufficiently warrant its abolition.

The Association recommends the abolition of the 1918 Act. However, if it is decided to continue the system with amendments, the Association agrees to co-operate and give the system a fair trial. The following amendments are suggested:—

(1) An abolition of the system of fixing wages by reference to age.

(2) An extension of the proposed 48-hour week to a 52-56-hour week, according to the needs of the various localities.

(3) That the fixing of a scale of wages should be postponed to a more opportune time, i.e. until the economic situation becomes more settled.

(4) That District Committees should be set up to advise the Trade Board upon the conditions of their districts, with an independent chairman, and provision made to avoid conflict with decisions regarding adjoining areas.

(5) That the Board should consist of representatives of employers and workmen only, but governed by an independent chairman or in the alternative.

(6) That the appointed members should be ladies and gentlemen with a fair practical knowledge at least of the trade.

(7) That provision should be made for appeal from the Board's decisions.

(8) That the Board should be given fuller

power to deal with new proposals and objections in order to save expense of successive advertisements.*

* A statement expressing approval of the above statement was submitted by the Pontypridd and District Grocers' and Provision Dealers' Association.

(24)—Statement submitted by the Scottish Agricultural Organisation Society.

Evidence submitted by Mr. John Drysdale, Secretary, Scottish Agricultural Organisation Society, Ltd., on behalf of Small-holders' and Crofters' Agricultural Co-operative Societies in the Highlands and Islands (promoted by, and affiliated to, the Central Organisation or Parent Society), who have asked him to represent that the Grocery and Provisions Trade Board (Scotland) should not apply to crofter societies in remote districts in the Highlands and in Orkney and Shetland, and Outer Hebridean Islands.

A list of societies of smallholders and crofters who have through their officials sent to the Scottish Agricultural Organisation Society, letters complaining of the proposal to make the regulations of the Grocery and Provisions Trade Board (Scotland) applicable to such societies, is sent herewith.

A protest was forwarded, at the request of these societies, to the Secretary of the Trade Board in question on the 23rd December, pointing out that the societies in question were promoted for the purpose of mutual trading in agricultural requirements and in the combined marketing of produce. A marketing agency was promoted in their interest called the Scottish Farm and Poultry Produce Federation, Ltd.

Each of the federated societies subscribe for five shares in the federation, of the nominal value of £1 each, on which 1s. per share is called up. Through this agency, operated in Leith and Glasgow, the produce consigned in bulk by the smallholder societies is marketed. The proceeds are guaranteed and the federation charges a small commission for its services to cover risks of bad debts and working expenses. All profits accruing after putting aside a sum to reserve account is paid to the societies by way of bonus *pro rata* according to the amount of commission paid by each society.

The Federation, on the other hand, passes on the bulked orders of the societies to millers, manufacturers and wholesale merchants, etc., etc., for such things as the members may wish to buy in combination. Only those societies which are unfavourably situated for obtaining provisions buy these commodities; but in the strict sense of the term, there is no dealing in groceries or provisions, and in only one instance, that of Westray Society, Orkney, are any full-time employees engaged in collecting and packing eggs and in dividing out consignments of meal, flour, poultry and cattle feeding stuffs, etc., to the members.

In the case of the other societies the secretaries are only part-time employees, getting an honorarium at the close of the financial year, or, as in some cases, 2½ per cent. commission on the goods bought. The committees of these societies render assistance as voluntary workers for a few hours weekly, in packing eggs or dividing out consignments of goods when a steamer arrives at the local pier. Neither secretaries nor committees are under any contract of service.

Annexed is a copy of letter sent by the directors of the Scottish Agricultural Organisation Society to the Ministry of Labour, dated 23rd December, 1920, and a copy of the Ministry's reply, dated 11th April, 1921.

On receipt of this letter, letters of enquiry were issued to all the societies concerned on the 12th April, 1921, and a summary of the replies received was sent to the Ministry of Labour on the 6th May, 1921.

A copy of the summary is annexed herewith, to which so far no reply has been received.

The replies of the societies speak for themselves. To impose the regulations of the Grocery and Provisions Trade Board on these societies of poor people, giving of their spare time only for the mutual benefit

of the members, would be little short of ludicrous, and, as some of the secretaries state, would lead to the closing down of the business.

Of the 107 societies given in the accompanying list, 26 do not trade in provisions, and these are marked with an asterisk.

The Executive Committee of the Scottish Agricultural Organisation Society desire to respectfully submit to the Committee that the societies in question should be regarded as entirely *outwith* the regulations of the Grocery and Provisions Trade Board (Scotland) as regards wages or hours of employment.

JOHN DRYSDALE,
Organising Secretary.

23rd December, 1920.

The Secretary,
Grocery and Provision Trade Board (Scotland),
Old Sergeant's Inn Chambers,
Chancery Lane, London, W.C.2.

SIR,

PROPOSED SCALE OF WAGES FOR EMPLOYEES.

Our attention has been drawn to a circular issued by your Board to our affiliated societies on the above subject.

These societies are Agricultural Co-operative Societies registered under the Industrial and Provident Societies Acts, and, especially in Orkney, Shetland, the Western Isles and the Highlands, are run mostly by crofters and fishermen. The "employees" are nearly always shareholders who give part of their time from their ordinary occupations of fishing, crofting, etc. It would therefore appear that the intended scale of pay should not apply to such societies, but of this my directors would be glad to be assured.

In any case it is submitted that the same scale of pay should not be enforced in such remote parts of Scotland as the Hebrides, Orkney, Shetland and the Highlands, as may be laid down for the industrial centres and the Lowlands generally.

I shall be glad to hear from you at your early convenience, and should any further particulars be required, I shall be pleased to furnish same.

Meantime would you kindly let me have three copies of your circular and relative papers?

I have the honour to be, Sir,
Your obedient Servant,
(Signed) JOHN DRYSDALE,
Secretary.

Ministry of Labour,
Montagu House,
Whitehall,
London, S.W.1.

T.B.D.100/3/2.

11th April, 1921.

SIR,

I AM directed by the Minister of Labour to refer to your letter of 23rd December, enquiring as to the applicability of the determinations of the Grocery and Provisions Trade Board (Scotland) to certain Agricultural Co-operative Societies affiliated to your Society and registered under the Industrial Co-operative Societies Acts, and I am to express the Minister's regret that it has not previously been found possible to reply to your letter.

I am now to state that the Minister has been in consultation with his legal advisers on this matter and he would be glad if you would be so good as to forward a short statement with regard to each individual society in your organisation stating the exact nature of the work done by the various members of the staff, secretaries and shareholders of the society. I am also to request you to inform the Minister of the arrangements under which the staff, secretaries and shareholders work, stating whether the shareholders in particular are merely voluntary workers, whether they receive any remuneration for their work, whether they are bound to obey orders given to them by persons acting on behalf of the society or whether there is any contract of service express or implied.

On receipt of this information the Minister hopes to be in a position to reply to the enquiries raised in your letter.

I am, Sir,
Your obedient Servant,
(Signed) J. S. NICHOLSON.

The Secretary,
Scottish Agricultural Organisation Society, Ltd.,
5, St. Andrew Square,
Edinburgh.

SCOTTISH AGRICULTURAL ORGANISATION SOCIETY, LTD.

SUMMARY OF REPLIES RECEIVED FROM THE SECRETARIES
OF AGRICULTURAL CO-OPERATIVE SOCIETIES IN THE
HIGHLANDS AND ISLANDS.

Argyllshire.

Bunessan and District Agricultural Co-operative Society, Ltd., Mull.

The Secretary and Treasurer attends to the grading and counting of eggs sent in by members and packs and dispatches same to the marketing agency in Glasgow. There is only about three hours' work per day in doing this. The Secretary is under no contract of service.

Loch Shiel Agricultural Co-operative Society, Ltd.

The Secretary of this Society writes that this Society employs no one except a carter, who gets paid so much per cwt. for cartage of goods and the Secretary gets 2½ per cent. commission on the purchases.

Balemartin Agricultural Co-operative Society, Ltd., Tiree.

This Society only engaged in the dispatch of eggs, which are brought by the shareholders to the store. They do not deal in groceries or provisions.

Appin Agricultural Co-operative Society, Ltd.

The Secretary writes that he is the only one connected with the Society in receipt of remuneration. He does the work of Secretary and Treasurer in his spare time. He is the local schoolmaster in the district. None of the shareholders get any remuneration for work.

Banffshire.

Braes of Glenlivet Farmers' Supply Association, Ltd.

There is no contract of employment with anyone in connection with this Society. The shareholders and Secretary are voluntary workers.

Inverness-shire.

Nether Lochaber Agricultural Co-operative Society, Ltd., Onich.

The members of Committee of this Society give their work gratis. There is no contract of service express or implied. The Secretary gets 2½ per cent. on the price of goods ordered by the shareholders.

Sconser Crofters' Co-operative Society, Ltd., Skye.

The shareholders of this Society devote some of their spare time as voluntary workers. They get nothing for their services and merely see that the goods arriving in bulk for the members are divided out. They have no contract of service.

Kinlochleven Co-operative Society, Ltd.

This Society is governed by a Committee of 12 members who meet occasionally to watch over the affairs of the Society. They carry out stocktaking three times per annum. They survey and check the details of the business but do not get any recompense whatsoever. The Secretary is unpaid also, but may get a nominal honorarium at the end of the financial year.

Northbay Agricultural Co-operative Society, Ltd.

The Secretary and Treasurer is the only person who carries on the work of the Society, and even then it is only his spare time he devotes. He gets 2½ per cent. commission on sales. Members of the Committee give a helping hand but act voluntarily and get no remuneration. None of them are under any contract of service.

West Barra Agricultural Co-operative Society, Ltd., Barra.

The Secretary states that the Society is not in a position to pay wages to employees. No one is under

any contract of engagement and all that the Secretary and Treasurer can expect is a small commission out of the profits at the end of the year.

Rhodu Crofters' Co-operative Society, Ltd., North Uist.

This Society has only recently started and has not yet got into proper working order. The Secretary orders on goods in bulk for members and collects the accounts. He is promised a small commission per £, which will not be arranged till the end of the financial year.

Garrynamonie and District Agricultural Co-operative Society, Ltd., South Uist.

The Secretary, who is only a part-time employee, keeps the books and orders goods for the members, and is only engaged in the work of the Society twice per week. There is no contract of engagement. Members of Committee are expected to take turn about in conveying eggs to the pier and carting goods from the pier, and they take turn about at packing eggs.

Benbecula West Agricultural Co-operative Society, Ltd., Benbecula.

The Secretary here is the only employee. He keeps the books and orders goods on behalf of members and gets a small commission on the turnover for his services.

Baleshare and Illeary Agricultural Co-operative Society, Ltd., North Uist.

Secretary and Treasurer of this Society does all the work necessary, but he is only a part-time employee doing the work during his spare time. He gets 5 per cent. on the turnover and provides the premises where the eggs are packed and supplies fire and light.

Finsbay and District Crofters' Co-operative Society, Ltd., Harris.

The Secretary writes: "As regards our Society, all the work done is voluntary service. The bulked purchases made on behalf of members arrive by boat and the members await arrival at the landing place and take delivery of the goods ordered for them. The members take an equal share of voluntary work."

Orkney.

Dounby Agricultural Co-operative Society, Ltd.

The man who acts as Secretary and Treasurer of this Society is the only person who receives any remuneration. The shareholders assist in distributing goods and packing eggs for dispatch to the South. They are entirely voluntary workers and receive no remuneration and are in no wise bound to obey any orders from any person acting on behalf of the Society.

Sunday Agricultural Co-operative Society, Ltd.

The Secretary, who is also the Treasurer, is the only person employed, and he gets a small salary for keeping the books. The members occasionally give assistance in packing eggs for shipment but are under no contract of engagement. The shareholders do all the work necessary in their spare time and are voluntary workers.

Edray Agricultural Co-operative Society, Ltd.

This Society is run and managed by crofters. It is a very small business altogether, principally in packing eggs for dispatch to the Southern market and purchasing agricultural requirements. No wages are paid, but an honorarium may be paid to the Secretary at the end of the financial year. He is only employed about two hours weekly. If a scale of wages and hours of labour were applied here the Society would have to wind up.

Rousay, Egilsay and Veira Co-operative Society, Ltd.

The only employee of this Society during his spare time is a weaver and fisherman by trade. He is

what is called a handy man and does odd jobs for all and sundry in the district, and is under no contract of employment. The man who does occasional cartage is a crofter who carts the goods from the pier to the store and delivers the purchases made on behalf of members with his van. The workers are all voluntary workers, who are shareholders of the society and are under no contract of engagement.

Deerness Agricultural Co-operative Society, Ltd.

No work is done for this Society by the shareholders, voluntary or otherwise. The work is done by the man who acts as Secretary and Treasurer and a girl who is only casually employed to assist him with the egg packing. Purchases made on behalf of members as they arrive are either carted by the members themselves or set out by a man with a horse and van, but the employment is only casual.

South Pier Agricultural Co-operative Society, Ltd.

The Secretary of this Society does all the work necessary in his spare time and for this he is paid £20 per annum. He is a crofter fisherman and devotes only 10 hours per week of his spare time to the Society's work. There is no other employee. He thinks it would be quite a nice thing if, as a result of some grandmotherly legislation, he could get some more remuneration, but he asks the question, "Where is the money to come from?" This Society would at once cease to exist if expenses were increased. He is glad to have the little remuneration he gets during his spare time.

Orphir Agricultural Co-operative Society, Ltd.

The Secretary writes: "The work of our Society is done by a few shareholders devoting a short time each week of their spare time in packing eggs and one of the shareholders carts them to the pier. There is no one connected with the Society under any express orders from anyone and the work for the most part is done voluntarily and only in their spare time."

North Ronaldshay Agricultural Co-operative Society, Ltd.

The Secretary writes: "That this is only a small society with a membership of 38 crofters. The Secretary does the correspondence and orders the goods and gets a small remuneration on the turnover. The members of Committee give whatever assistance they can in their spare time but receive no remuneration. The Secretary is not a full-time employee, but only acts in his spare time after his own day's work is over. The Society is not in a position to employ or pay anyone full-time wages, but it votes the Secretary an honorarium at the end of the financial year. The members of Committee get no remuneration."

Holm Agricultural Co-operative Society, Ltd.

The business of this Society consists wholly in the purchase and sale of agricultural produce and requirements such as eggs, seeds, manures, and feeding stuffs. The collection and packing of eggs is done by contract, as also the handling and carting of other commodities. The Secretary is only paid an honorarium for his services. He is not a full time employee. The Society does not consider it comes under the grocery and provision trade business in any shape or form.

Westray Agricultural Co-operative Society, Ltd.

The Secretary of this Society gets no pay for his services in that respect but gets a little remuneration as a part-time employee. There are three employees, The Manager is a full time employee and so is his assistant, but the van man is only a part time employee as his work only occupies the small part of each day. The Manager and his assistant are under contracts of engagement.

Ross-shire.

Gairloch Agricultural Co-operative Society, Ltd.

The work of the Society is carried on by one man who acts as Secretary and Treasurer during his spare time. The Society does very little business in

the grocery and provision trade. The Secretary gets no salary but is voted a small gratuity by his Committee.

Kinlochewe Agricultural Co-operative Society, Ltd.

The shareholders of this Society purchase only feeding stuffs, fertilisers, seeds and meal. The members hand in a note of their requirements to the Secretary who orders on the goods in bulk and the shareholders take delivery at the Railway Station. There is no weighing of goods and no work done in handling the stuff. The Secretary gets an honorarium of £5 for his services.

Shetland.

Cunningburgh Agricultural Co-operative Society, Ltd.

The Secretary, who is also the Manager, is the only official connected with this Society and he is only employed one day per week and part of another day. During the rest of the week he looks after hiscroft. The Secretary thinks that any interference by the Ministry of Labour fixing hours or scale of wages would practically put an end to this business. A percentage on the turnover is the only remuneration this man gets for his work; no wages are paid.

Central Agricultural Society, Ltd., Dunrossness.

This Society does not deal in groceries or provisions. The business is confined to feeding stuffs for livestock, corn and grass seeds. The Secretary gets no wage as such but may get an honorarium at the end of the year if there is any profit.

Sutherlandshire.

Brora Agricultural Co-operative Society, Ltd.

This Society has no dealings in groceries nor provisions and none of the shareholders do any work in connection with the Society.

Dornoch Agricultural Co-operative Society, Ltd.

This Society deals only in agricultural seeds, artificial manures, coal, and feeding stuffs for livestock. The goods are ordered in bulk and the members take delivery at the railway station. None of the shareholders get any pay for their services and no one is under any contract of engagement. The Secretary only devotes his spare time to the Society's work.

VIII. Hollow-Ware Trade,

(25)—Statement submitted by the Wrought Hollow-ware Trade Employers' Association.

1. The Hollow-ware Trade Board (Great Britain) was established in 1913 and first began to regulate the wages of workers in the hollow-ware trade in 1916.

2. The Wrought Hollow-ware Trade Employers' Association has been given the privilege of nominating members for the employers' side of the Board, and its nominations have in all cases been approved by the Minister.

3. The Association desires to represent to the Committee that its members are strongly in favour of maintaining machinery in this trade for the enforcement under legal penalty of minimum day rates which shall apply throughout the whole of this trade irrespective of the district in which individual factories are situated.

4. The Association is not aware of any alternative machinery which would be likely to fulfil this object more efficiently than the Trade Board now existing, and while great importance is attached to the amendments suggested in this memorandum, the Association strongly urges that subject to these amendments the Hollow-ware Trade Board should continue to function.

5. The following are the amendments suggested in the present system:—

- (a) That the statutory period for objections should be not more than fourteen days from the date of issue of proposals, the printing and circulation of proposals to be accelerated.
 - (b) That the period taken by the Minister of Labour to ratify the decisions of the Boards should be curtailed to one week.
 - (c) That the only appointed member should be an independent Chairman.
 - (d) That the Boards should cease to have power to fix either a basis time rate for pieceworkers (other than the general minimum time rate) or a guaranteed time rate for pieceworkers.
 - (e) That power should be given to the Boards to make any provisions for successive variations in wages which they may deem desirable, for example, in accordance with variations in cost of living or on some other agreed basis.
6. The following arguments are put forward in support of these suggestions:—
- (a) The slowness of the existing machinery is naturally more keenly felt now that wages have begun to follow a downward tendency,

because while there was a remedy open to the workers when Trade Board rates could not be advanced quickly enough, there is no corresponding remedy open to employers when the legal rates cannot be reduced quickly enough. The workers cannot be expected to agree to reductions in wages four months ahead in view of conditions which are likely to be then in being, but which are really only a matter of speculation.

(b) The same arguments call for the amendment suggested in Clause (b).

(c) The reduction in the number of appointed members is suggested.

(1) on grounds of economy,

(2) with a view to reducing the amount of interference in matters which are the concern of those actually engaged in the trade.

(d) The Hollow-ware Trade Board has only recently, in face of the unanimous and strenuous opposition of the employers' side, fixed a basis time rate for women pieceworkers in excess of the general minimum rate. The result has been, as the employers predicted, a falling off in the individual output of the workers concerned. A guaranteed time rate for pieceworkers cannot be fixed in excess of the general minimum time rate, but this Association is strongly of opinion that the difference between the guaranteed rate and the piecework basis rate is only a technical one, and that the principle of both is utterly unsound.

(e) It will be within the knowledge of the Committee that a very large number of trades have adopted "sliding-scale" schemes which are operating to the advantage of all concerned by obviating the necessity for periodical negotiations. It is desired that the legal obstacles which it is understood prevent a Trade Board from adopting such a scheme should be removed.

7. The Association will be prepared to send a deputation to appear before the Committee should the latter consider it desirable for this evidence to be verbally supplemented.

IX. Milk Distributive Trade.

(26)—Extract from a letter received from Viscount Wolmer, M.P.

I have a general farm of about 1,200 acres in Hampshire, and a portion of the farm is devoted to dairy farming. I have about 130 cows in milk. The bulk of this milk is sent to London, but for the convenience of the neighbourhood some of it is sold locally. The staff engaged on this is as follows:—

One dairyman whose duties are to measure the milk, enter it up, and to fill and clean the churns.

Two roundsmen whose duties are to drive milk carts from house to house.

Under the operation of the Trade Boards Acts these men are brought within the ambit of the Milk Distributive Trade Board and the wages which I have to pay them and the hours which they keep are as follows:—

The dairyman works on week-days from 6 a.m. to 12 noon and again from 2 p.m. to 5.30 p.m. On Sundays he works from 6 a.m. to 12 noon and has every fourth Sunday off. His wages for this under the Trade Board award come to £3 11s. per week.

One roundsman works on week-days from 6.30 a.m. to 12 noon and again from 2 p.m. to 5 p.m. His wages come to £2 14s. 4d. per week.

The other roundsman works from 6.30 a.m. to 2 p.m. and again from 4 p.m. to 5 p.m. and on Sundays from 7 a.m. to 2 p.m. His wages come to £3 6s. per week.

There is no special skill in the dairyman's work, while that of roundsmen is so easy that it can be performed by cripples; it should also be added, and this is very material, that the distribution of milk in the country takes far longer than in the towns owing to the much greater distances covered; but consider these wages in relation to those of the ordinary agricultural labourer. In Hampshire the minimum agricultural wage fixed by the National Farmers' Union is now 36s. and that is what most farmers are paying. I am, as a matter of fact, temporarily paying a minimum of 39s. to ordinary labourers, 45s. to carters, and 48s. to cowmen because I wish to share these hard times with my employees and to help them to tide over the period until the local retail prices shall have come down, but I have warned them that these figures will have to be reduced by at least 3s. in the new year.

It is not only unfair that the roundsmen whose task is a particularly simple one should be paid more than the most skilled men such as carters and cowmen, but it is also prejudicial to the harmony of the farm. There is naturally discontent among the men at this disparity of treatment. The wage fixed by the Trade Board is out of all proportion to other agricultural wages. This is the chief point that I

desire to make to your Committee—the difficulty caused by imposing town wages on a particular branch of farming without reference to the cost of living in the country or to the level of wages for the rest of agriculture. But I must also add that the effect of these Trade Board wages on my milk business has been to increase the price of the milk, and to lower the efficiency of the service.

Before this Order came out I was able to deliver milk locally twice a day, but the result of the Order was that a profit of £4 per week was immediately converted into a loss of £4 per week, so that I had to reduce the number of my roundsmen and to have only one local delivery instead of two.

It can also, I think, be shown that the present high retail price of milk (3s. per gallon as opposed to 1s. 11d. wholesale) is largely due to these very high wages, which are altogether in excess of what the nature of the work warrants.

Finally, I must point out that the Milk Order, so far as the country is concerned, is working very unfairly; in a great many farms it is altogether ignored. On my enquiring at the Ministry of Labour why this was I was told it was because there were no (or few) inspectors, so that the Ministry is quite unable to enforce compliance with this Order in the country. Those of us, therefore, who received in 1920 a notification of the Order and were obliged to stick up a copy of it on our premises are forced to pay wages which other farmers do not.

If the present state of affairs continues much longer I shall probably have to discontinue my local service and to dismiss my roundsmen, in which case the locality will either have to go without milk or else the job will be taken over by some man who ignores the Order.

The facts which never seem to have been appreciated by the Ministry of Labour are that:—

- (1) Dairy farmers are usually also general farmers.
- (2) Dairy farmers usually sell milk locally as well as wholesale.
- (3) The retail sale of milk in the country is a much more expensive business than in towns owing to the distances which separate houses.

It is therefore absurd to force farmers to pay wages which may or may not be justifiable in towns but which can have no application to conditions in the country.

Farming is now going through a very critical stage, wholesale prices of produce are falling headlong, and correspondingly drastic reductions of wages are necessary all round; the industry enjoys quite sufficient attention from the Ministry of Agriculture and should be free from interference by other Departments.

(27)—Statement submitted by the National Farmers' Union.

1. THE SCOPE OF TRADE BOARDS.

In the opinion of the National Farmers' Union, Trade Boards should be restricted to their original function, i.e., dealing with sweated industries where workers are employed under anti-social conditions, thus involving an indefinite subsidy to such industries by the community. That the Trade Boards in practice have not accepted this as their proper function is proved by the fact that they have fixed varying minimum rates, not only in different industries, but in various branches of the same industry. In other words, they have become merely a piece of machinery for adjusting wage rates in industries already carried on under conditions which could not be classed as anti-social. For this function the machinery of the Trade Board is too rigid and has broken down, especially during the period of economic disturbance through which we are passing.

2. THE AGRICULTURAL WAGES BOARD.

The agricultural industry has had considerable experience of a board which, though administered by a

different Department under a different Act, was essentially a Trade Board, viz., the Agricultural Wages Board. Even with the assistance of District Wages Committees to advise the central Board regarding local conditions, the machinery proved too cumbersome and too rigid for the following reasons:—

- (a) The very wide variation of natural conditions under which any one branch of the industry is carried on.
- (b) The multiplicity of operations calling for a wide variation of skill included in the industry.
- (c) The lack of elasticity in the provision for exemption from the fixed rates, which took account only of proved physical disability.
- (d) The difficulty of assessing at a uniform monetary rate the value of allowances such as cottage, milk, potatoes, fuel, &c.

Under war time conditions, and subsequently under the Corn Production (1920) Act, these disabilities were accepted, under protest, by the industry, but with the repeal of the cereal guarantees under the Corn Production Acts (Repeal) Act of this year, the Government recognised that they were no longer applicable, and replaced the Central Wages Board by Local Conciliation Committees. Within the short period of their existence these Committees, which have been set up in every county, have made considerable progress. It is certain that had the old rigid machinery of the Wages Board been retained, it would have led, under recent conditions, to very grave agricultural unemployment.

3. THE MILK DISTRIBUTIVE TRADE BOARD.

The agricultural industry is directly concerned with the operations of a board set up under the Trade Boards Act, viz., the Milk Distributive Trade Board. With regard to the working of this board, the National Farmers' Union would respectfully direct the attention of the Committee to the following facts:—

- (a) The Milk Distributive Trade Board was set up under peculiar temporary conditions during the period of the war. When the producer's price was fixed the price at which milk should be retailed was also fixed, and as it was found that different retailers were paying their labour at different rates certain sections of the trade were enabled to make larger profits than were admitted to others owing to this fact. Under these circumstances, in order that it might be more easy from an administrative point of view to fix a margin of profit for all concerned in the distribution of milk, it was felt that there was need for a Trade Board to temporarily adjust the wages of such employees.
- (b) That the operations of the Board would lead to very grave difficulties in the organisation of labour on the farm was recognised at an early stage, and to minimise these an agreement was arrived at between the

Board and the Agricultural Wages Board. This was embodied in a memorandum by the Minister of Labour expressing his intention not to apply the rates fixed by the Board to workers engaged in the disposal of milk wholesale from the farm, and defining the minimum period of work on other branches of distribution which would bring the worker within the scope of the Board's rates for such time as he was engaged on them.

- (c) Even then serious anomalies remained and exist to-day where farmers retail milk, unskilled workers receiving a higher rate for such work than has been accepted by the workers' representatives as a fair rate for skilled workers. This naturally leads to a feeling of injustice among the workers.
- (d) With the abolition of the Agricultural Wages Board this agreement loses any appearance of validity it ever possessed, and it remains, as it really always has been, liable to be upset by a decision in the Courts defining the wholesale handling of milk on the farm as coming within "distribution."
- (e) This would multiply the anomalies already existing on the farm, and, further, these anomalies are intensified by the agreements recently accepted by the agricultural workers' representatives on local Conciliation Committees as being in harmony with conditions in the industry at the moment.
- (f) The present high costs of the distribution of milk react upon the producer by contracting the demand for his produce, or, alternatively, depressing the first-hand price below a fair level. In many cases in summer the margin between the producer's and the consumer's prices equals if it does not exceed the amount received by the producer.

In view of the circumstances under which the Milk Distributive Trade Board was established, as stated above, and in view of the results of its operation, the National Farmers' Union urges that the Board should be now abolished. Should the Committee fail to see their way to make such a recommendation, the National Farmers' Union asks that an amending Order be issued by the Minister of Labour defining the scope of the Board in such a way as to exclude from its operations all districts of a rural character.

4. OTHER TRADE BOARDS.

The agricultural industry is indirectly concerned with other Trade Boards, the effect of whose operations in rural areas is to maintain at an unduly high rate the cost of living of the agricultural workers. The National Farmers' Union would direct the attention of the Committee, for example, to the rates fixed for grocers' assistants in rural areas, which are not proportionate to wages paid to other rural workers and constitute an excessive charge upon the food supplies of agricultural workers.

X. Paper Bag Trade.

(28)—Statement submitted by Mr. Foster G. Robinson, Managing Director of Messrs. E. S. & A. Robinson, Ltd., Redcliffe Street, Bristol, on behalf of the United Kingdom Paper Bag Manufacturers' Association.

My name is Foster G. Robinson and I am Managing Director of Messrs. E. S. and A. Robinson, Ltd., Paper Bag Manufacturers, Paper Box Manufacturers and Wholesale Stationers, etc. I have acted as Chairman of the employers' representatives on the Paper Bag Trade Board (Great Britain) since it was established in May, 1919. I have also been, and am, the Chairman of the United Kingdom Paper Bag Manufacturers' Association, which is the recognised organisation of employers in the Paper Bag-

making Trade, through whose agency the names of the great majority of employers' representatives on the Board were sent to the Ministry of Labour. The other employers' representatives are those whose names have been suggested by the United British (Wholesale) Paper Bag Makers' Association whose offices are in Carlisle.

The first meeting of the Paper Bagmaking Trade Board (Great Britain) took place on 24th July, 1919, and since then there have been nine meetings of the

Board. I have also acted on the Administrative Committee set up by the Board, and have regularly attended their meetings of which there have been eight since the formation of the Board. The chief work of the Board has, of course, been the fixing of minimum rates of wages for male and female workers in the trade. The minimum rates fixed from time to time are as set forth in the accompanying schedule.

The first minimum rates fixed by the Board which became operative on 24th November, 1919, were rates which were fixed simply as minimum basic rates for male and female workers and did not include rates specifically for skilled workers. It was considered, however, shortly after these rates came into operation, that use might be made of the Trade Board in its aspect as an Industrial Council that minimum rates should also be fixed for the more skilled male workers, and negotiations were entered into between the employers' and the workers' sides, the workers' representatives being more or less appointed to the Board by the Ministry of Labour on the suggestion of the following two Unions, viz.:—

The National Union of Operative Printers and Assistants, and
The National Union of Printing, Bookbinding, Machine Ruling and Paper Workers.

A conference was held on 4th November, 1919, when minimum rates for the more skilled classes of workers were agreed to and were ultimately submitted to the Board who fixed these rates and they were made legally effective by the Minister of Labour on 15th March, 1920, as shown in the schedule. It is distinctly understood that in fixing the minimum rates for these workers that they were not standard rates it being recognised that in various parts of the country higher wages would be paid for better classes of skilled workers or in those cases where difficulty in obtaining these workers might arise.

It is considered that Trade Boards should continue to have similar powers to fix minimum rates for special classes of skilled workers but not without the consent of both sides of the Board.

There is no doubt that the fact of the meetings of the Trade Board from time to time and particularly the Administrative Committee, have been to improve the relationship between employers and employed. At the Administrative Committee meetings all permits and questions of scope and other matters relating to the trade were discussed together in a very friendly manner with the result that both sides recognised the views and interests of one another and so created a mutual and helpful spirit. There is no doubt that this friendly co-operation has had the effect of preventing trade disputes, it being the fact that since the Board was formed no disputes of any consequence have occurred. The employers' representatives have no reason to complain of the rates which have been fixed from time to time by the Board since its formation. It is true that they have been much higher than would have been paid in the trade prior to the war, but the conditions obtaining during the war have been such, as is the case in other trades, that it was necessary to increase the minimum rates to meet these conditions. On the whole the employers' representatives cordially agree to the formation of the Trade Board and consider that it has been the means of doing much good generally to the trade, and on that account they strongly desire the continuance of Trade Boards. On the other hand, however, they have strong views upon the necessity of simplifying and improving the present administration.

- (1) There is a period at present of in all about four months before a rate which is proposed can be made effective. The delay due to this has worked with prejudice to both sides of the Boards and the period accordingly should be largely reduced. Steps therefore should be taken to bring this about. At present the long period is due to the two months allowed for objections when a rate has been proposed and the period of one month taken by the Minister of Labour to revise the rates.

Something should be done to reduce these periods. In any event any reasonable measure resulting in considerable decrease in the period would largely tend to make the Trade Board much more elastic in its work.

- (2) The question has arisen with regard to the Minister's revision of the rates fixed by the Board and to the delay which takes place in adjusting a final settlement in connection therewith and it is suggested that the period which the Minister has to make rates effective is too long, particularly in cases where there is agreement on both sides as to the rates concerned.
- (3) The employers' representatives take much exception to the change in procedure by the Minister of Labour in dealing with questions of scope. The Department constitute themselves as the final voice in such questions. In some cases their decisions have been communicated to Trade Boards and are often objected to by the Administrative Committee. If there is anybody capable of dealing with such questions as these it is the Administrative Committee of the Board itself who are almost entirely composed of persons experienced in the trade. The view is held that opinions on these cases are more likely to be upheld in the Courts as the views of the trade as against opinions prepared by officials of a Government Department. It is therefore strongly urged that the previous procedure of making the Trade Board the deciding body should be continued.
- (4) It is recognised that much of the value of Trade Board work is prejudiced by the want of efficient inspection, the result being that employers who are only too willing to pay the rates and observe the conditions of the Acts are at an unfair advantage compared with those employers who are not disposed to pay the rates fixed. Action should therefore be taken by the Minister to increase the number of efficient inspectors for the purposes and further that the control inspection should be more largely in the hands of the Trade Board themselves. It is also advised that more attention should be given by the inspectors to smaller employers. The whole machinery for inspection and prosecution should be centred at the Trade Board Offices in order to secure prompt and intelligent inspection.
- (5) No District Trade Committees were formed in connection with this trade because there did not appear to be any necessity for setting these up. The general view has been in favour of universal minimum rates of wages it being left to the various districts to deal with the standard rates to be paid according to requirements of the districts.
- (6) It is understood that in some Boards there is a provision in the regulations enabling them to carry on their proceedings by Side Voting. The reason for this is that as the two sides of the Board must vote under the regulations in equal numbers the danger arises that the vote of one member on either side might give the vote against the side by his single vote. There is no doubt that such a provision is a valuable one for both sides of the Board and should be one extended to all Trade Boards.
- (7) Many employers to whom the rates apply are engaged in Trade Board trades as ancillary to their main business, the result being that in some cases there is more than one Trade Board rate, or with one Trade Board rate they may be up against the current

rates paid to workers in the main business for which there is no Trade Board. These conditions raise difficulties for which some provision should be made. Many Paper Bag Makers are also Cardboard Box Makers, Printers and Bookbinders. The Bag and Box Trade Board rates have generally been the same, but a great difficulty for composite houses is the arrangement between the Master Printers' Federation and the Trade Unions concerned by which towns and villages are graded into five districts, each paying a different rate. Printing rates do not come under any Trade Board. The rates in the various districts are sometimes higher and sometimes lower than those fixed by the Bag and Box Trade Board. When the rate is higher than the Bag and Box Trade Board rate the composite house is severely penalised because either it must pay the higher rate or it must have friction amongst its workers. If it pays the higher rate it has difficulty in competing with firms who are in one trade only, and who can consequently pay a lower rate without friction because it is uniform. We suggest that a Trade Board should be formed for female employees at any rate in the Printing and Bookbinding Trades.

- (8) Complaint is made in some quarters that the rates of wages fixed by the Trade Boards have tended to unemployment. So far as this trade is concerned this complaint is not justified, the view being that on the whole the effect of the minimum rates has been much to raise the standard of labour and in general to improve the relations between employers and employed.
- (9) There is no doubt that the Trade Board is hampered by the control of the Ministry of Labour and that if the administration were more concentrated in the Trade Board Offices work would be carried out with less delay and with more efficiency. Under the present arrangements the officials of the Minister of Labour have no technical knowledge of the trade or of its conditions, but as Trade Boards consist almost entirely of persons who have full knowledge of the trade, Trade Boards should be the governing bodies rather than the Minister of Labour.

There is another Association named the United British (Wholesale) Paper Bag Makers' Association through whom five employers' representatives are appointed to the Board. This Association closely co-operates with my Association in the work of the Trade Board and I have been authorised to say that the views above expressed are concurred in by that Association.

STATEMENT OF MINIMUM RATES OF WAGES AS FIXED AND VARIED BY THE PAPER BAGMAKING TRADE BOARD (GREAT BRITAIN).

	48-hour Week.	
	General Minimum Time-Rate.	Piecework Basis Rate.
	Per hour.	Per hour.
	s. d.	d.

Female Workers of 18 years of age and upwards ... 8 8½

These rates were made effective by the Minister of Labour on 24th November, 1919.

- (2) Male Machine Tacklers of 23 years of age and over ... 1 6

Male Paper Bag Cutter of 23 years of age and over ... 1 4

Male Hydraulic Pressers, Slitters, Stock-keepers, Packers and Despatchers of 21 years of age and upwards... 1 3

These rates were made effective by the Minister of Labour on 15th March, 1920.

- (3) Male Machine Tacklers of 23 years of age and over ... 1 8½

Male Paper Bag Cutters of 23 years of age and over ... 1 6½

Male Hydraulic Pressers, Slitters, Stock-keepers, Packers and Despatchers of 21 years of age and upwards... 1 5½

All other Male Workers of 21 years of age and upwards ... 1 4½

Female Workers of 18 years of age and upwards ... 9½ 9½

These rates were made effective by the Minister of Labour on 15th November, 1920.

- (4) Male Machine Tacklers of 23 years of age and over ... 1 6½

Male Paper Bag Cutters of 23 years of age and over ... 1 5

Male Hydraulic Pressers, Slitters, Stock-keepers, Packers and Despatchers of 21 years of age and upwards... 1 4½

All other Male Workers of 21 years of age and upwards ... 1 3½

Female Workers of 18 years of age and upwards ... 8½ 8½

These rates were made effective by the Minister of Labour on 4th November, 1921.

The rates of wages for younger Workers were in proportion to the above-mentioned rates.

XI. Retail Bespoke Tailoring Trade.

(29)—Letter received from Mr. R. Tucker, Tavistock, employer in the Retail Bespoke Tailoring Trade.

To the Secretary of the Cave Committee.

81, West Street,
Tavistock, Devon,

Nov. 22nd, 1921.

DEAR SIR,

May I, a small master tailor, venture to approach your Committee with reference to the

serious effects of Trade Board Regulations on such businesses as that with which I am connected?

In many West Country towns before the War a tailor's wages was not more than 26s. per week for constant work. In many cases it was even less. Where piece-work rates were paid higher pay was earned during the season, but lost time considerably reduced the average.

In larger towns, like Plymouth, the trade was chiefly done by women at much lower rates. In Cornwall, where I had considerable experience as foreman cutter, girls of experience and ability were only paid from 8s. to 12s. per week.

It is unnecessary for me to say that even in that day such payments could not be defended, and I sincerely hope that there will never be a return to such conditions.

The attitude of the Trade Board, however, in regard to tailoring is equally indefensible, in that it is throttling trade and causing widespread unemployment. The present fixed rate of wages for men is 76s. per week of 48 hours. This rate applies to all localities, all classes of tailoring establishments (except a few doing exclusive garments), and all general workers without regard to worth and ability. Many country trades have invariably had their work done by male labour, while in a large number of town trades only one man would be employed to a dozen or more women, which naturally reduces cost of production, placing the country tailor employing only men at a great disadvantage. Another method often resorted to in the large towns is to send garments to be made up at factory workshops on what are practically Ready-made principles, and since there is no standard definition of Tailor-made, this works out very unfairly for the honest trader.

The application of present Trade Board rules must in these circumstances tend to drive the trade into the larger towns and consequently throw large numbers of men out of employment, since the amount of female labour in those towns makes the absorption of male workers impossible.

Another matter to which your attention should be directed is that to-day numbers of those who have been thrown out of work have started as their own masters, in many cases working at less than Trade Board rates, and touting for orders at prices below what is possible where the proper rates are paid.

I would also like to point out that wages in other trades and vocations have been considerably reduced. In agricultural districts there is much depression, and labourers' rates of pay have fallen to a point which is likely to make them comparatively poorer than before the War, and consequently unable to purchase necessities produced at much higher rates.

Again, there are great differences in the cost of living even in the various districts of a single county. Under the National Housing Scheme, for instance, rentals are in some districts double what they are in others, while rates show an even greater divergence. This Scheme subsidises the building trades to the extent of from 200 per cent. to 300 per cent.

You will observe that so far my criticism of the Tailoring Trade Board has been destructive rather than constructive; may I, therefore, presume to make a few suggestions which might be helpful to your Committee in its deliberations for the future welfare of the industry? I would suggest—

- (I) Regional Boards or Committees working under, or in conjunction with, the Ministry of Labour.

For this purpose the country should be divided into several districts each having its own Trade Board, which should con-

sist of direct representatives of both employers and employees, together with certain nominees of the Ministry of Labour. Such representatives of employers should have not less than ten years' experience as principals, five years to have been spent in one business. Representatives of employees to have not less than seven years' experience beside apprenticeship, two years to have been spent in one situation. Those representing the Ministry would naturally possess special qualifications and experience. This would exclude adventurers.

- (II) Differentiation of rates of pay in various areas. The minimum rates should not be the same for all localities, but each District Committee should have power to subdivide its area, according to local conditions, into three classes with a different minimum, either side having right of appeal.

- (III) Differentiation of workers by mutual arrangement. Each employer should have liberty to "Grade" his workers in either 1st, 2nd or 3rd Class, according to their degree of efficiency. That is within prescribed limits. Such a grading is of first importance for both master and man. Under the present system with its high minimum it becomes the maximum, and the efficient workman becomes discontented when he finds a less efficient shopmate paid at the same rate; the inefficient, knowing his pay is assured, has no inducement to improve, while men are often sent to join the ranks of the unemployed who might be kept in work if it were possible by mutual arrangement to put them in another grade.

- (IV) Licences to legitimate traders. Each trader fulfilling the conditions of labour should be licensed at a nominal fee for the particular trade in which he is engaged. No trade to use a name which does not strictly describe its commodities. No one, for instance, to advertise as "Tailor" if only doing ready-mades. This would end an existing injustice in many trades, while the licence fees would help to provide funds for carrying on the work of the Boards.

Of course, a licence should never be refused where satisfactory assurances are given.

I apologise for the length of this letter and for its presumption; it is only a desire for the best interests of all parties in the trade which has prompted me to write, whilst I cannot but recognise that the present Trade Board is killing the trade. I have no desire to see a return to pre-War conditions.

I have the honour to remain, Sir,
Yours obediently,

(Signed) RICHARD TUCKER,

Joint Author of "How to Manage a Tailoring Trade," published by the Tailor and Cutter, London.

(30)—Statement submitted by Mr. A. G. Cottrell, Retail Tailor, Uffculme, Devon.

I. The greatest proof, we consider, of the failure of the regulations is that in many districts the men who have been discharged from our workshops for want of trade are taking in the work from our customers, and doing it at less than half the price fixed by the Trade Board; in some cases into homes where there are cases of tuberculosis and other sickness.

II. The regulations are having the effect of driving away with the real tailor, who makes the garment complete and in the best class, and driving it into

the hands of female labour, where, with team labour and under conditions not far removed from sweating, garments are rushed out at one-third the price of a good tailored one.

III. We cannot take boy apprentices, the starting wage being out of all reason; thus in a few years male labour will be extinct.

IV. In this district I consider the men themselves are willing and anxious to sign a petition to allow them to make their own terms with employers.

V. The trade is now sufficiently organised (both men and employers) to be able to arrange a wage according to the districts or to form a Conciliation Board.

VI. In my own business, where before the Minimum Wage was introduced I employed 8 men, I now have 4, who are working on an average of 3½ days per week; but a tailor in an adjoining village, who has 3 sons working with him, is busy with work because he can pay his own sons just what he chooses, and is consequently charging 35s. for making garments

which I have to pay 52s. 6d. for, thus showing how unfair becomes the working of such regulations.

VII. In this district the journeymen have the expenses to meet that larger towns and cities demand. For instance, 3 of my employees are paying 2s. 9d., 3s. 6d. and 4s. 9d. per week for houses and gardens, whereas in towns they often pay 12s. 6d. per week.

We cannot demand the price in an agricultural district for our goods that larger centres get.

(Signed) A. G. COTTRELL.

(31)—Letters addressed by the Master Tailors' Association of Orkney to the Secretary of the Retail Bespoke Tailoring Trade Board (Great Britain) and to the Minister of Labour.

26, Albert Street,

Kirkwall,

22nd September, 1921.

SIR,

The Master Tailors' Association of Orkney would respectfully draw your attention to the urgent necessity for immediately exempting Orkney from the scale of wages for operative tailors and tailoresses as recently fixed by the Trade Board, for the following reasons:—

- (1) Orkney is exempt from the Wages Board rate of wages in agriculture.
- (2) It is manifestly unfair to fix a flat rate applicable for cities like London and Glasgow and a country district like Orkney.
- (3) Master tailors in Orkney who formerly employed large staffs of workers are faced with the necessity of further reducing the number of their employees. In some cases these have already been reduced by more than a half.
- (4) Tailors working for themselves without employees so cut prices that master tailors with employees cannot possibly compete. These working tailors have no fixed scale of charges, and to them the master tailors' rates do not apply.
- (5) The high charges fixed by the Trade Board has killed, and is killing, the *bond fide* bespoke tailoring trade in Orkney. Drapers who know nothing about tailoring are canvassing for orders from the ready-made wholesale houses, leaving the *bond fide* journeymen tailors in Orkney with little or nothing to do. These, along with those who have already lost employment, are swelling the ranks of the unemployed in Orkney.

It is urgently necessary that immediate action be taken to decontrol wages in the tailoring trade in Orkney. The price of made-to-order suits is so high that, while the Trade Board compel us to pay the wages as in the West End of London, our businesses will gradually die until we shall have nothing left.

Yours truly,

(Sgd.) P. SHEARER, President,
(Sgd.) JAS. CLOUSTON, Secretary,

The Master Tailors' Association of Orkney.

The Secretary,
Office of Trade Boards,
7-11, Old Bailey,
London, E.C.4.

26, Albert Street,

Kirkwall,

4th November, 1921.

SIR,

In view of the fact that a committee have been appointed, under the presidency of Lord Cave, to inquire into the working of the Trade Boards Act, our Association wish to state:—

- (1) The above Act has nearly killed the trade in the Orkney Islands. There is not more than one-third of the men employed in the shops who had previously fairly constant work.
- (2) There used to be over fifty male apprentices in Orkney. At the present time there is only one in all the Islands. If this Act continues there will soon be no merchant tailors and only a few old men who will do jobbing in their own houses, and over whom the Trade Board will have no cognisance.
- (3) Living in Orkney is comparatively cheap. Rents are about half what they are in Edinburgh. Actual poverty in the Islands is not known, but the people are not able to pay the present high price for suits, especially seeing that drapers who have no interest in the trade, and who know nothing about it, are continually canvassing for wholesale ready-made houses who, we know, are producing suits at the present time for 37s. per suit. So that money and trade are leaving the Islands, leaving masters and men with nothing to do but look at each other.

We sent a communication to the Trade Board, dated 16th June, and another dated 22nd September, which we would respectfully ask you to place, along with this letter, before Lord Cave's Committee. We would urge the Court, if they wish to save us from utter ruin, to place Orkney outside the Trade Board Act, as has been done with the agricultural interests in Orkney.

Yours faithfully,

(Sgd.) P. SHEARER, President,
(Sgd.) JAS. CLOUSTON, Secretary,

The Master Tailors' Association of Orkney.

The Rt. Hon. T. J. Macnamara, LL.D., M.P.

XII. Stamped or Pressed Metal-Wares Trade.

(32) Statement submitted by Mr. H. D. Jackson, supplementary to oral evidence given on 23rd November, 1921.

The Stamped or Pressed Metal Wares Trade Board was established on the 13th February, 1920, and at once proceeded to its deliberations to fix minimum rates. The employers' panel was found to represent many associations of workers, which, although they did not directly represent the trades defined by the order included most of the members of those trades and, as it is presumed that the Minister of Labour

did not consider the organisation in the trades sufficient, he therefore instituted a Trade Board.

I would here like to point out that those who have the requisite knowledge do not know such a trade as the Stamped or Pressed Metal Wares Trade and the Order does not really represent one trade but a conglomeration of trades, many of which are small ones and confined to a few firms, and there is therefore

not sufficient justification for each trade to have its own organisation; on the other hand the majority of the employers in those trades were federated to other organisations in larger trades, and although there was not an organisation in that particular trade, these employers did, as a matter of fact, come under an agreement for the fixing of wages; for instance as an illustration, in my own case I come under the Stamped or Pressed Metal Wares trade for the manufacture of brace and suspender fittings, and in this trade there are not more than half a dozen employers in the whole country and consequently there was no justification for the expenditure necessary to maintain an organisation for this trade; I on my part, joined the Harness Furniture Association of Walsall with other members who were similarly situated, and wages were regulated by an agreement between this Association and the Harness and Saddlery Furniture Trades Association, which two associations comprise 90 per cent. of both employers and employed in the Walsall district who employed the class of labour in question.

On entering into a Board of this description it naturally follows that the employers are at the initial disadvantage of not knowing one another in many cases whereas the bulk of the employees' representatives being Trade Union leaders, have come in touch with one another before and know one another's views.

At the first meeting of the Board the employers asked for a minimum rate of 7d. per hour and the workers' side asked for a minimum rate of 11½d.: this 7d. per hour was based on the wages paid in the Harness Furniture trade mentioned above by mutual agreement between both sides and the figures contained in this agreement are before you in my evidence given on the 23rd November last, the employers naturally pointed out that the very fact of these agreed rates being in existence, should form the basis for the minimum rate applicable to the working of the Board, as hundreds of employees who came under this agreement would come under the Trade Board, the workers' side maintained that the rates fixed by the Ministry of Munitions during the war, which they called the "prescribed rates" should be the ones that the Board fixed, and here I would particularly draw your attention to the fact admitted by the Workers' Union under an agreement with the Birmingham Engineering Employers' Association, dated 23rd November, 1915, and referred to in my evidence of the 23rd of November last, paragraph 2717, where a clause was inserted reading as follows:—

"It is understood that the £1 minimum recently recommended by the Ministry of Munitions is to apply to women now doing work, which prior to the war, was done by men only."

This admission by the Workers' Union that the rates fixed by the Ministry of Munitions for war work were exceptional was strongly held by the employers' representatives who contended that rates so fixed for munition work should certainly not be accepted as applicable to ordinary trade, as the law of supply and demand naturally operated and the fact that thousands of men had been taken out of the various trades and women substituted for them meant that the supply of female labour was not equal to the demand, and under those circumstances it was only natural that the Ministry should fix a wage sufficiently high to attract all the labour possible, but I do not think they had any idea that this wage would be considered an economic one in ordinary trade conditions; this argument went on for three days and during the course of the discussion the appointed members naturally saw both sides separately and endeavoured to alter their views; various amendments were made by both sides, but finally the appointed members saw the employers and told them that they could not give them their vote unless they agreed to a particular rate and the argument they used for this rate was, that several Boards within the last two or three months had fixed 9d. as a minimum rate, and as the cost of living had arisen and was likely to rise they would not vote for the employers unless they agreed to a rate of 9d.; this argument I

think is an absolutely fallacious one as it does not take into consideration the power of the trade to bear the burden, neither does it take into account the nature of the work performed, but naturally the employers felt that to save worse happening they had better accept 9d., as otherwise it was evident the appointed members would vote for the workers' suggestion of 10½d. This I think will illustrate my argument regarding appointed members in my evidence of the 23rd November last.

In that evidence I have also shown the enormous increases in wages it meant to certain employees and the confusion that arose owing to the fact that those employers who came under the Trade Board and who also manufactured articles which did not come under the Trade Board, could by the agreement referred to above if they chose, pay a rate of wages which was, in some cases, 30 per cent. below the Trade Board rate, but in actual practice, to save unrest in the works they felt compelled to pay the Trade Board rate and thus, where they had to compete with other manufacturers making such articles who did not come under a Trade Board, they were at the disadvantage of paying a considerably higher rate than their competitors, and this was never intended at the institution of the Trade Boards Acts.

This also has the effect of unsettling those employees in works not covered by a Trade Board who are doing the same work as others in works covered by Trade Board, as I have shown that in the latter case employers felt compelled to pay higher wages than those agreed upon with labour representatives, owing to the fact that some portion of their output was covered by a Trade Board and those paid the lower rate naturally felt dissatisfied with the agreement arrived at by their own representatives and agitated for an increase.

I also illustrate in my evidence of the 23rd November the fact that in three trades closely allied to and in fact actually forming part of what the Minister designates the Stamped or Pressed Metal Wares trade and where it is almost impossible to distinguish between them, different rates of pay were fixed thus leading to a very great confusion.

At a meeting at which I was not present, owing to the fact that the employers did not know one another sufficiently to get a real considered combined policy, a resolution was passed delegating to a Committee, of four on each side, the fixing of skilled rates for both males and females. This Committee proceeded to carry out the work entrusted to them but great difficulty was experienced in getting definitions that it was felt would cover the operations in existence and the greatest difficulty was experienced in trying to fix definitions of skill for females; the employers' representatives were so doubtful about the definitions that were fixed that they said at once that they could not bind themselves until they had consulted their constituents, and a storm of opposition was raised against this owing to the fact that they covered people that the Committee never had in mind or intended to bring in. This brought about the position that the employers' representatives opposed the fixing of skilled rates altogether but they were beaten in their motion by the votes of the appointed members, who really did not understand as much about the business as they did themselves, and if it was evident that this Committee could not fix definitions that were satisfactory, which they have agreed was so, surely the appointed members were in a worse position still; and I contend that the fixing of skilled rates is a thing that should not be attempted by any Trade Board such as the Stamped or Pressed Metal Wares Trade Board as it is impossible even for employers who are acquainted with many sections of the trade to be able to be acquainted with all the trades comprised in the order, and to be able to get out a definition that will not do an injustice either to certain employers or certain employees of whom they have no knowledge.

Then again in the case of the fixing of skilled rates for Polishers the rates agreed upon between the Brass Employers' Federation in Birmingham and the Brass and Metal Mechanics' Union were taken as the basis and the rates of this agreement adopted; but there were in existence rates agreed between the Harness

Furniture Association and the Harness and Saddlery Furniture Trades Association employing exactly the same class of labour and doing exactly the same work which were considerably below those rates, and it therefore meant that the Walsall employers who came under the Trade Board had to increase their rates of pay during a period of great depression in trade because of the fixing of these rates by the Trade Board, and here again surely if skilled rates are to be fixed they should certainly not be higher than any rate that could be shown to be fixed by agreement between the bulk of the employers and employees in a section of the trade which comes under the Trade Board order.

Early this year an application was made for a reduction in female rates, and once again the agreement between the Harness Furniture Association and Harness and Saddlery Furniture Trades Association was put before the meeting as evidence that the rate asked for by the employers was the correct one, but no notice was taken of this agreement, and again rates were fixed on a higher scale, this also by the vote and influence of the Appointed Members and the anomalies that have been mentioned in my evidence of the 23rd November last were perpetuated.

At the early meeting of the Stamped or Pressed Metal Wares Trade Board all the members of both sides were quite under the impression that any article made by the processes of cold stamping and cold piercing from sheet metals other than precious metals would come under the Trade Board, but as they went along it was felt that the Minister of Labour had endeavoured to divide up the metal industries into watertight compartments making specified articles, and therefore many articles were excluded that the whole Board considered should be included; for instance, cabinet fittings are included in the order, but the decision was given that the hinges for cabinets were not included, and if this is not a cabinet fitting I should like to know what is the use of this description at all. This is one illustration of many cases that occurred, and the Board during the latter part of 1920 approached the Ministry of Labour and pointed out that the existing definition was absurd and could not possibly be worked. Several meetings were held on this question, and at these meetings both the employers' and workers' sides of the Board contended that it was altogether wrong and against the usual practice to try and define rates of wages by the article produced, and strongly held that definition "by process" should be the method adopted, and to illustrate what was meant by these definitions "by process" they suggested that each worker should be paid according to the work performed, or, in other words, Sorters should be paid for sorting work, Press workers for operating presses, Braziers for brazing any articles and not for sorting, stamping, and piercing or brazing such as Suspender fittings, Gas Light fittings and Cabinet fittings respectively. After considerable discussion the Minister of Labour said he could not accept this, but he was prepared to amend the definition on the old basis, and new definitions have been got out comprising 38 separate articles or sets of articles, and in these 38 articles or sets of articles those acquainted with the trades consider that there are 20 or more separate trades as defined by the Minister, but only one industry, that is the metal industry. Even here the Minister of Labour would not include such articles as locks and latches, cycle accessories manufactured by firms in the cycle trade, motor lamps and bicycle lamps, although domestic paraffin lamps are included, which are very similar in manufacture, and this new definition does not cover all the articles made by the process of cold stamping and cold piercing; finally, under pressure from the Committee, in order to avoid a difficulty, the Minister of Labour offered to send out a definition "by process" as the recommendation of the Trade Board Committee, but would not father it himself, and it was felt rather than face the possibility that the Minister of Labour would only give lukewarm support to their definition the united feeling of the Committee should be given up in deference to the opinion of the Minister of Labour, and that his attenuated definition should be sent out. This, I

think, is the effect of Government interference in industry by departments who have no knowledge of the practical side of the business, and is also an illustration of the fact that the whole of the representatives of the trades concerned were of opinion that the only satisfactory method of dealing with wages was by process, and yet the Minister of Labour went against this united opinion and decided that he could not possibly father a definition of that character, and I would point out here that these facts do strongly support my contention in my evidence of the 23rd November last, that this is the only practical method of settling wages, that is, "by process" rather than by the article made.

Notwithstanding the enquiries of the Minister of Labour regarding organisations, I maintain that at least 80 per cent. of the firms covered by this Trade Board are in some organisation of employers in the Midland district; they may not be organised under their separate trades, but they are members of some employers' organisation which negotiates wages in agreement with trade unions, and a great many of them in the smaller trades belong to the National Employers' Federation, and, therefore, although the Minister may say there is no organisation of the particular trade, he has overlooked the fact that wages agreements in the majority of instances cover the wages of these firms, and it is only another illustration of the unbusinesslike method of Government Departments in ascertaining their information in a stereotyped style and enquiring whether there is an organisation in the trade rather than whether the bulk of the employers are in a trade organisation either connected with their particular trade or of a general character such as the National Employers' Federation and other similar organisations.

We maintain that in the Midland district there is sufficient organisation amongst the various bodies in existence to speak for at least 80 per cent. of the employers in the metal industries, and we ask that we shall be allowed to regulate our own wages by means of confederations of these organisations without any interference by a Government Department and without the presence of any outsiders, who do not and cannot possibly, without years of study, understand the conditions prevailing in the industry concerned. If it is felt necessary that these wages shall be made statutory we have no objection to an order by the Minister of Labour or any other Government Department, preferably the Board of Trade, making an agreement arrived at by this body in conjunction with representatives of the Trade Unions in the district obligatory to all employers within the industry, and we would also agree that in case of deadlock in the negotiations the matter shall be decided by an independent person selected and agreed to by both sides, as they would naturally select somebody, in whom they both had confidence, who was acquainted with the conditions prevailing in the district, and we maintain that this would prevent what is happening in the Stamped or Pressed Metal Wares Trade Board, namely, that whichever side the Appointed Members voted against went away from the meeting thoroughly dissatisfied and in no mood to see that the decisions of the Board were carried out for the benefit of everybody concerned, and although we cannot speak for all employers' sides of the Trade Boards in the country, we feel sure that if this method of settling wages, which has now been in existence for many years, were put before them the majority of them, at any rate, would fall in with it at once, as it is the method that has been adopted by the largest and best organisations such as the Engineering and Ship Building and Iron and Steel trades and in the Engineering and Ship Building trades, instead of having one rate for the whole of the country, there are various rates which they apply to different districts according to the conditions prevailing in these districts; and these rates have been instituted by people who understand their business and understand the conditions prevailing in the trade, and should therefore be in an infinitely better position than any Trade Board to settle a wage that will give satisfaction to both sides.

In my evidence of the 23rd November, paragraph 2720, I give particulars of the effects of the order of the Button Board on one of the firms in the trade, and in a letter dated 2nd December this firm says:—

"We may say we have had an order offered to us, at a price, from America which would keep us going for two or three months on full time, and if we were able to negotiate freely with our workpeople we should be able to accept this both to our own and their satisfaction; as it is, we are

bound hand and foot unless we ignore the Trade Board."

and this will illustrate the impossibility of controlling such a delicate machine by hide-bound Government method.

If such a body as I had outlined were in existence it would be easy to get a meeting and settle a point like this, as has been done before under the ordinary arrangements in existence for regulating wages.

XII (a). Wholesale Mantle and Costume Trade.

(32a)—Statement of Evidence submitted on behalf of the Wholesale Mantle and Costume Manufacturers' Federation of Great Britain.

This expression of views represents the opinion of the Employers' Representatives of the Wholesale Mantle and Costume Trade Board.

The Wholesale Mantle and Costume Manufacturers' Federation of Great Britain is an organisation representing the following:—

- (2) British Wholesale Costume and Mantle Makers' Association (London).
- (3) Scottish Mantle Makers' Association (Glasgow).
- (3) Manchester and District Mantle Makers' Association.
- (4) Leeds Wholesale Clothiers and Mantle Makers' Association.
- (5) Birmingham and The Midlands, and Bristol are also represented.

CAPTURED INDUSTRY.

The making up for the wholesale of ladies' and children's mantles, costumes and coats did not exist in Great Britain, except in a very limited degree, until some 35 years ago; but has gradually been captured from the Continent during that period; the early development of the industry in this country was materially helped by a Labour dispute in Berlin years ago.

SETTING UP OF TRADE BOARD.

When the Minister of Labour decided to set up a Trade Board under the Act for this industry on 20th November, 1919, the various local associations enumerated were communicated with by the Department; the result being an increase of membership of the local associations and the formation of the Federation. Undoubtedly the question of wages, hours, &c., meant to the individual employers a more quickened interest in these matters and a desire to corroborate with each other individually and collectively.

Before the setting up of this Trade Board the trade was, under the Wages Temporary Regulation Act, bound to pay a minimum rate of 7d. per hour to women of 18 years and over, but local rates in kindred trades governed to a degree the rates of pay.

The employers submit that when the Trade Boards Acts were applied to the trade it could not be considered a sweated one; although no doubt there might be cases of sweating in some districts, particularly amongst "out" (home) workers. Employers recognised the need of some machinery to regulate proper rates of pay throughout the whole industry, otherwise competition in this vast trade, with its ramifications, is unfair to the employer anxious to pay reasonable wages.

INDUSTRY IN ITS INFANCY.

Previous to the setting up of the Trade Board wages varied in different areas, particularly as this was a new and growing industry with sure and certain possibility of still greater development in the future if trade disputes can be avoided. At present employers have a direct interest in this Trade Board through their representatives, who report from time to time and receive instructions from their local association or Federation executive.

The employers of the wholesale section of this trade depend upon the labour they employ to a much greater extent than some other branches of the trade. The trade being seasonal, there are slack periods, during which, in order to retain workers, stock garments are made up, which are usually sold at a sacrifice.

TRADE BOARD AVOIDANCE OF DISPUTES.

The Trade Board has thus far in this trade ensured the avoidance of any strike since it was set up, due to the following causes:—

- (1) Meeting for the first time leaders of the Trade Unions.
- (2) "Getting together," consequently gaining confidence in each other with a mutual anxiety for a "square deal."
- (3) When difficulties have arisen during Trade Board meetings a way has been found to avoid stoppage of works by negotiation.
- (4) The experience has not been a lengthy one, but in other and kindred industries (as for instance the Ready-made and Bespoke Tailoring), largely through the Trade Board, strikes and disputes have been avoided even during the late war.
- (5) Tactful handling by the independent chairman, who from time to time made suggestions but left the two sides to negotiate settlement.
- (6) Committees of this Board are at the present moment co-operating with two other sections of the sewing trade to evolve a better system of learnership, very necessary for the Britisher if he, as a worker in the trade, is to hold his own.

FUTURE.

The future outlook of the wholesale differs from other branches of the trade because:—

- (1) Ready-to-wear garments are in greater demand, and are likely to be so, than ever before.
- (2) The evolution during the last 10 years of the ready-to-wear (a) capes and coats, (b) costumes, (c) dresses, (d) coat frocks, both in quality and quantity, is rapid.
- (3) The avoidance of trade disputes in this young and growing industry is necessary to ensure its development.
- (4) Thus far this Trade Board has been the only alternative to the go-as-you-please policy.

RATES.

Rates of pay not standard but minimum. Learners' rates and unemployment:—

- (1) Boys and girls employed on war work at high rates, while trade "starved" for 3/4 years, the learners' rates had to be increased to attract labour.
- (2) Latterly trade depression and non-engagement of learners, because desired to fully employ older workers with dependants.

- (3) Wholesalers opportunity at present, which he takes and has taken during the 5 years to increase and develop his trade.
- (4) Trade Board learnership high rates affect unemployment to a slight degree only.

TRADE BOARD AMENDMENTS SUGGESTED.

1. Shortened time in which rates may be varied.
2. Chairmen only, without appointed members.
3. Fewer Boards but not a Parliament; must not sacrifice the direct personal interest of employers.
4. Overlapping. One basic minimum rate for all sewing trades.
5. In a small factory employing, say, not more than 20 workers all told, and making a variety of garments,

the rates of pay governed by whatever section of the trade the employer is "mainly engaged" in.

FACTORY INSPECTORS DIRECTED FROM TRADE BOARD OFFICE.

- (A) Home Office Factory Inspector.
- (B) Ministry of Labour or Unemployment and Health Inspectors.
- (C) Local Authority—Public Health Department.
6. Trade Boards ought to have some limited powers of administration, including questions of scope and definition, and a court of appeal of some description other than the Ministry of Labour, to and from whom frequent correspondence passes.

XIII. General.

(33)—Evidence submitted by Mr. Cecil Walton, of Lever Bros., Port Sunlight, Cheshire.

A great deal of evidence has already been submitted covering wages and hours of labour and as it would appear that nothing new in this respect can be submitted, I propose to deal with the matter from a point of view which has, so far as I have been able to gather, not been sufficiently emphasised.

OBJECT OF TRADE BOARDS.

The original object in introducing Trade Boards was to deal with industries which were not covered by Trade Organisation, or industries not sufficiently important, to command such attention.

In pre-war days Trade Unionism was practically confined to organisations in skilled trades. Trade Unionism therefore, was, in effect, Craft Unionism.

Arising out of war conditions when great masses of unskilled labour were called upon to serve the country in the production of munitions of war, various organisations arose which eventually developed into the now powerful movement known as "unskilled labour organisation."

To-day, therefore, the position is entirely different to pre-war conditions, and it would be difficult to know which of the two is stronger, craft unionism or unskilled unionism. The original object of Trade Boards, namely, the protection of unorganised industry is either fast disappearing, or has already disappeared.

Trade Boards may have been justified as a protective measure. Certainly Trade Unionism was introduced for this particular reason, and it is becoming increasingly difficult to see why two separate bodies are necessary, one directly concerned with industry, and the other instituted by the State.

By such means there are two conflicting organisations introduced into industry, which can only end in disaster, and it is becoming impossible for employers to deal with both.

We shall have Trade Unionisms laying down one set of conditions, Trade Boards another, and employers another. A triangle of conflicting opinions in which one of the two must be constantly defeated, or a position in which Trade Unionism is on one hand, and employers on the other, with the Government holding a watching brief. In other words it is an introduction of compulsory arbitration to which labour and employers will never agree.

It is an historical fact that organised labour resents State interference far more strongly than employers.

Again, we have two distinct political sections of

opinion; one encouraging Trade Boards in organised industry, and the other encouraging the conduct of industry on the lines of the Whitley report.

It is not within the scope of the present enquiry to discuss the Whitley report, or its recommendations, but it is obvious that:—

- (a) Trade Boards represent rigidity of conditions.
- (b) Whitley councils represent considerable elasticity.

If we adhere to clause (a) it means rigidity of conditions, hours and wages, etc., by regulations set up to compulsion, which will mean that those regulations, and only those regulations, will be carried out.

It is probable that never in our industrial history has such a change been made in our industrial atmosphere as in the last two years. There has been a growth of an entirely new spirit. The rigidity of conditions will mean the destruction of that spirit; the upsetting of comradeship which is now making itself felt, and reconciliation will fast become impossible.

We shall drift back to the days when men were considered as merely so many hands or check numbers, and team work, which is now being so encouragingly brought forward, will be entirely abolished.

There will be no encouragement to employers with any vision to continue with schemes already in existence, or with such as they may have in view. The hopes of sane leaders of Trade Union Organisations will never be realised. The increasing interest of the employee in the business of his employer will cease, and organised labour officials who now do so much as liaison officers, will find their efforts unavailing.

In effect, labour will once more become a machine; to be used merely as a machine, and cast aside when done with. The points, therefore, which I wish to emphasise are:—

- (a) That Trade Boards in industries employing organised labour are entirely unnecessary and will introduce further complications.
- (b) That Trade Boards are interfering unnecessarily with Trade Union Organisations.
- (c) That Trade Boards will set up a rigidity of conditions which will set a standard for all industry far behind the standard that the great employers of this country have in view for their employees.

C.—Statements submitted by Workers' Organisations.

(34)—Statement submitted by Miss M. C. Steen, Assistant Scottish Organiser, National Amalgamated Union of Shop Assistants, Warehousemen and Clerks, Member of Dressmaking and Women's Light Clothing Trade Board (Scotland) (Workers' Side), Secretary of Workers' Side, Hat, Cap and Millinery Trade Board (Scotland).

While I do not think that Trade Boards can adequately legislate for all the needs of Dressmaking and Millinery Workers, their retention is in my view

absolutely necessary in order that a reversion to the state of affairs, which at one time existed, may be prevented.

STATE OF SEWING TRADES PRIOR TO 1914.

For many years, I was employed as Saleswomen in a Drapery Establishment which employed large numbers of dressmakers and milliners, I therefore know intimately what those conditions were. The knowledge of what obtained in the establishment in which I was employed myself was corroborated by the experience of two of my sisters employed in other firms, one as a dressmaker, and the other as a milliner.

UNEMPLOYMENT ACCOMPANYING LOW WAGES.

Employers state that the unemployment which prevails in the Trade just now is due to the high rates fixed by the Trade Board, but long before Trade Boards were extended to the Sewing Trades, my sisters had to abandon dressmaking and millinery owing to the recurrence winter after winter of dull time. High wages could not be the cause of suspension then, as girls worked for the whole of the first year for nothing, and highly skilled craftswomen received as wages anything from 14s. to 15s. per week.

UNPAID OVERTIME IN BUSY SEASON.

They suffered if trade was bad, they also suffered if it was good.

In the winter time when orders were few, they were turned into the street. When spring came and trade revived, they worked overtime without receiving any extra payment for it. This state of affairs continued right up to 1917.

THE BEGINNING OF ORGANISATION.

In 1916, after two years of war and its accompaniment of soaring prices, the dressmakers in two Aberdeen establishments summed up courage to ask for an all-round advance in wages. They did not at that time join the Union, but sent in to their employers a "Round Robin" asking for consideration. Both firms ignored this timid request, but one set of employees, more brave than the other, made a second attempt, and secured an offer of an increase on a percentage basis.

This was considered satisfactory until it came to be understood clearly. When the girls realised that the actual cash value of the offer ranged from 3d. to 9d. per week (in a few isolated cases 1s. per week), they felt that they were being insulted, and pressed for further consideration. The firm refused to come further and, although they had no organisation behind them, the dressmakers ceased work.

As was to be expected of a strike of this kind, it proved abortive, and work had to be resumed at the employers' terms.

While the "dispute" was in progress the dressmakers found their way to the Aberdeen Branch of the Shop Assistants' Union, of which I was at that time Secretary. Plans were then laid for approaching local firms with a uniform programme of wages and conditions in the following spring.

ATTEMPTS TO SECURE UNION RECOGNITION.

Eventually this was accomplished, but the Union's request met with the same fate as the "Round Robin": no reply was received. We tried to fix up an interview by conversation on the phone, but without success, and finally our Scottish organiser, Mr. Beaton, having had no replies to his letters, and no success with phone conversations, took the bull by the horns by walking into one of the establishments and confronting the proprietor. The partner of a neighbouring establishment, with whom we were also in negotiation, was called in, and an impromptu joint conference was held at which a formal interview, for the purposes of arranging details, was fixed. We believed then that the employers were convinced of the necessity of coming to terms with us, as the employees' representatives, but subsequent events proved us mistaken.

FIRST DRESSMAKERS' STRIKE TAKES PLACE.

In due time Mr. Beaton travelled North to keep his appointment with the two firms, but when he called at the shop he was refused an audience.

We reported to our members and it was decided to give the firm one more chance. We therefore phoned the proprietor and again asked him to meet us for the purpose of discussing wages. He refused point blank to do so. We then informed him that the workers had decided to withdraw their labour unless an interview was conceded, his reply was that they could please themselves.

We met the dressmakers at the dinner interval and reported what had taken place; they unanimously agreed to cease work and did not resume in the afternoon.

THE EMPLOYERS ASK FOR NEGOTIATION THROUGH THE UNION.

No move towards reconciliation was made by the employers until three days had elapsed. By this time we had arranged a meeting for the purpose of letting the Aberdeen public hear the workers' side of the case. Just as we were about to begin we received an invitation to meet the local Drapery Association for the purpose of discussing a scale to apply to the whole of the trade in Aberdeen, on the understanding that the girls on strike resumed work at once. The girls did not resume, however, until an agreement satisfactory to those in dispute was arrived at.

IMPROVEMENT AS THE RESULT OF ORGANISATION.

In this way began the movement which developed and spread to practically every town of importance in Scotland, and which in a short time resulted in the establishment of a 48-hour week with payment for overtime at time and a half rates, payment for summer holidays, and the establishment of minimum wage rates. Only in one instance was the *abolition of dull time* secured, although it occupied a prominent place in our programme at that time (1917).

CONDITIONS ESTABLISHED PRIOR TO TRADE BOARD'S FORMATION.

In the spring of 1918 and 1919 further improvements were secured. A uniform working week of 44 hours in every town in which we had members was established with payment of overtime at time and a half rates. Payment for six days' statutory holidays in addition to payment for one week's summer holiday was conceded and increases in the minimum rates were also given.

It will be seen from the foregoing that by this time Scottish dressmakers were taking a hand effectively in shaping and regulating their own conditions. This was particularly the case in large towns. The only workers outside the scope of our National Agreement were those employed in small establishments in the city or in outlying country districts.

We believed, as did the employers of the Retail Garment Makers and Millinery Trades' Federation, that the setting up of a Dressmaking Trade Board would successfully deal with such cases, as by the operation of its rates their unfair competition would be done away with.

TRADE BOARD RATES PREVENT UNFAIR COMPETITION.

This belief has been justified by experience, and the levelling up process has told in favour of fair employers.

We have emphasised the strength of organisation which prevails among Scottish dressmakers, and this perhaps can best be verified by what took place when the first proposals of the Scottish Dressmaking Trade Board were issued on June, 1920, W.D.S. (1).

EMPLOYERS REFUSE TO NEGOTIATE ON THE PLEA THAT THE TRADE IS TO BE COVERED BY A TRADE BOARD.

In the spring of that year we approached the Scottish Retail Garment Makers and Millinery Trades' Federation with a programme of wages and conditions. They evaded an interview for the discussion

of this on the plea that a Board was about to be established. When the Board's proposals were issued they were found to be far short of our demand, and, of course, did not contain any reference to payment for summer or statutory holidays. Further, they proposed a normal working week of 46 hours, while 44 hours were what prevailed in the trade.

EMPLOYERS REFUSE TO GO BEYOND TRADE BOARD RATES. STOPPAGE OF DRESSMAKERS IN PRINCIPAL TOWNS.

We pressed the employers for higher rates for experienced workers, but they argued that Trade Board rates were sufficient and refused to meet us. In consequence of this our members in Edinburgh, Dundee, Falkirk, Stirling, Bannockburn and Aberdeen ceased work. Almost immediately settlements were obtained with a large number of individual firms.

This dispute was remarkable in a number of ways. In the first place, although *every worker came out*, only those over 20 years of age had a grievance. Trade Board rates were acceptable up to that age. In the second place, the busy season was just at its close: this put the employers in a very strong position.

(35)—Copy of a letter received from the National Laundry Workers' Union dated December 10th, 1921.

DEAR SIR,

I have been requested to state that the Trade Board for Laundry employees has been highly appreciated by them, and their hope is that it may continue to insure the necessary protection until this class of workers is better organised, protection from the sweated conditions and long hours to which some employers would certainly revert.

There are some suggestions that we should like to make while hoping for the continuance of the Trade Board.

That if there is to continue an hourly instead of a weekly rate that such hourly rate should be time and a quarter of ordinary rate. A halfpenny an hour is not sufficient, for we find some employers hustling the workers and so reaping the advantage to themselves.

Piece-work should be abolished.

That there should be only one young person under 18 years to every four over 18 years in order to

Possibly the employers counted on those factors and expected a certain victory, but if so they were mistaken. Although it took a considerable time we eventually came to a settlement in all the towns affected. A number of firms came to terms with us almost immediately, giving us in some instances our full request of 1s. 1d. per hour. A number settled for 1s. 0½d. per hour, a further number for 11½d. per hour.

Surely this is sufficient to show that the workers in this trade are likely to resist any attempt to bring back the disgraceful conditions which existed prior to 1917.

It is not to the credit of the State that such a condition of affairs should have existed at so recent a date, and in my view it is the function and duty of the Trade Board to see that a return to it is impossible.

A very large proportion of the nation's young women are employed in the sewing trades, and from the view of race preservation alone it is essential that they should be guaranteed at least a minimum of comfort. Organisation can do a great deal in large towns and establishments, but the Trade Board alone can legislate for the trade as a whole.

prevent employers having so many young girls for cheapness and also creating a surplus of labour.

That all national holidays, or days in lieu thereof, and one week in summer be paid for by the employers, under Trade Board rule.

That all rates of wages decided on by the Board remain unaltered for at least twelve months.

That where possible the workers' side of the Board should be represented by a representative from an organisation for that industry.

That all such representatives elected by said organisation be accepted by the Minister of Labour.

Regarding minimum rate of wage, Clause 6, paragraph 3 should be cancelled as employers are so allowed to obtain cheap labour.

Yours faithfully,

(Signed) G. DONALDSON.

D.—Statement submitted by Joint Organisation of Employers and Workers.

(36)—Statement submitted on behalf of the Birmingham and District Committee of The National Alliance of Employers and Employed.

At the outset it must be fully understood that the evidence submitted herewith is agreed upon between employers and employed represented on the Birmingham and District Committee of the National Alliance of Employers and Employed, and deals only with that aspect of the case that has been unanimously agreed upon by this Committee as affecting industry in their own districts.

We approve of the principle of Trade Boards only where industry is not sufficiently organised on either side to manage without them, and we are of the opinion that their constitution and procedure might be greatly improved to enable them to work more quickly and efficiently.

The Trade Board system embodies the principle of compulsory regulation of wages, and in effect puts the determination of the wage to be paid into the hands of an authority nominated by a Government Department, and one which does not in general enjoy the confidence of employers and employed.

Experience has shown in this district that certain employers who are controlled by Trade Board regulations, do not join their Federations, and cases are known of employers who have withdrawn from their Federations.

The same applies to workpeople who are protected by Trade Boards. They do not join their Trade Unions, and in numerous cases have ceased to be members of their Trade Unions.

It is submitted that where employers are not members of their Federations, and workpeople not members of their Trade Unions, it is impossible to efficiently see that Trade Board rates are being paid, and, in fact, it is known that in many cases Trade Board rates are not being paid.

The third Report of the Whitley Committee, dated June 7th, 1918, on "Relations between Employers and Employed on Joint Standing Industrial Councils," recommended that where no suitable organisation existed for the regulation of wages, a Trade Board should be set up, which, presumably, is the basis of the 1918 Act. They observe, however, "briefly our proposals are that the extent of State assistance should vary inversely with the degree of organisation in industries. We do not, however, regard Government assistance as an alternative to the organisation of employers and employed."

On the contrary, we regard it as a means of furthering the growth and development of each organisation."

The contrary seems to have been the case, because, as already pointed out, the effect of Trade Boards upon some of the employers, particularly the small employer, and the workpeople, has been to decrease their dependence on their trade organisations, the reason being that their wage conditions are regulated for them, and therefore they do not experience the same need to associate themselves with Employers' Federations or Trade Unions. The consequence is that instead of improving the organisation of Industry, the policy adopted is, in fact, rapidly bringing about a state of chaos.

It is submitted that when trade is good and labour scarce, Trade Boards will not contribute to peace in industry unless they put themselves in the place of the Best Employer, which situation is not contemplated under that Act. It is reasonable to expect, and it is human nature, that workers will not accept less from an employer who is under a Trade Board than workers who are employed by the employer whose rates are fixed by direct negotiation between his Federation and the Trade Union.

This means that wages fixed by direct negotiation will be the determining factor in the wage standard, and it is contended that no step should be taken by the State which will weaken the organisation on either side responsible for reaching such agreement.

Wide powers existed under the 1909 Act for the setting up of Trade Boards. It was not until the 1918 Act was passed that Trade Boards were set up to any extent. During the period 1909-1918 organisation among employers and the workers had developed enormously, and, it is contended, such organisations would have proved adequate for the safeguard of the two parties to industry. The activities of the Ministry, during the years 1918-1920, on the alleged lack of organisation, has done much to destroy the confidence of employers and employed.

Trade Boards have led to such confusion in Industry, as there are instances where four Boards apply to the same factory, although the work is practically identical.

Differing rates are applied to operations and the rates differ from those arrived at by direct negotiation, although the operations, from the point of view of skill, arduousness or economic value, are largely similar.

They prevent the quick determination of an economic wage.

Rates and operations scheduled by the Trade Boards are so numerous and complex that a very

large staff of inspectors would be needed to ensure definitely that effect was given them.

From the time a Trade Board determines a rate, until such rate becomes effective, a period of three months elapses, and before it can be altered a further six months must elapse, unless the Minister specially intervenes. A Trade Board having made a decision, such decision should be made applicable within a month, which provides plenty of time for appeal, and it should be within the power of the Board to alter a rate at any time, subject to the provision of a month's notice being given.

The Ministry of Labour should be impartially at the service of Industry, and should refrain from all undue interference in industrial affairs. A policy which lays it open to a charge of seeking an alternative to direct negotiations should be abandoned.

While a decision of a Trade Board is supposed to rest upon the authority of Law, any attempt to refuse application of such decision will create a difficult situation, and have a bad moral effect on the parties to industrial negotiation.

It is suggested an Industrial Tribunal be appointed to receive appeals for the removal from the control of a Trade Board already established, and if it can be proved that the majority of each side are organised, that section of Industry be automatically released.

It is suggested that unless it can be shown that less than 50 per cent. are organised, no steps should be taken to create a Trade Board, and that the Minister of Labour should not, in his own right, exercise an authority to create a Trade Board. The Industrial Tribunal before mentioned should examine any such proposal, give notice to the parties concerned, hear evidence and report; without such report the Ministry should not act.

Trade Boards should concern themselves only by fixing rates for grades of labour by occupation, and should not attempt to define wages for operations which are usually determined upon skill and merit.

It is suggested that where organisations exist of employers on the one hand and Trade Unions on the other, these organisations should be the means of determining rates by direct negotiation. A wage so fixed, should be reported to the Minister, made statutory, and applicable to all engaged in the industry.

It is contended that the progress of Self-Government within Industry must be judged, not by the number of Government regulations, but by their absence.

E.—Statements received from Neutral Sources.

(37)—Statement submitted by Miss Helen Sanders, Investigating Officer, appointed under the Trade Boards Acts, 1912—1918.

MY LORD,

In accordance with the request conveyed in the letter received from the Secretary of your Committee, I have the honour to submit the following statement, based on my experience as an investigating officer under the Trade Boards Act from September, 1912, to August, 1918, when I was seconded to the Ministry of Munitions.

If called upon to express an opinion as to what is the most essential condition of success in administration under the Trade Boards Acts, I should have no hesitation in placing first in importance the provision of some permanent co-ordinating factor between the Boards and the works of enforcement of their determinations. From 1909 to 1917 co-ordination was secured by the presence of a permanent whole-time chairman, who was not only chairman but leader of the appointed members, and was also empowered in a measure to control the work of the inspectorate under the Board of Trade.

The result of this arrangement, simple in itself, was far-reaching, and does not appear to have been sufficiently appreciated, for—since the abolition of the post of permanent chairman—no other provision for co-ordination appears to have been made, or to have been recognised as being desirable.

The permanent chairman was in a position to study the effects, probable and actual, of wage regulation as it would affect, or was affecting, the trades concerned, and to offer suggestions to the Boards, in the course of their deliberations, in the light of his knowledge. When in doubt as to the probable effect of any given proposal he could instruct a member of the investigating staff to make an inquiry and report to him personally. Further, he carried with him to the deliberations of new Boards the experience gained on others. And as leader of the appointed members he was able to guide them, from his wide experience and knowledge, in the exercise of their important functions in the event of disagreement between the employers' and the workers' sides.

The members of the inspectorate under his control were encouraged to call his attention to any apparent defects or difficulties of administration which came to their notice when a determination was enforced, and especially the period of proposal of a rate under Section 4 (2) of the Act of 1909, was largely used by him as an opportunity for inquiry by inspectors as to the suitability of the proposed determination, while alteration and modification were still practicable. It is probably a matter of common agreement that the complexities of industry are so great

that the effects of any given regulation are often not foreseen even by those most familiar with the trade concerned, and also that trade experts often have an unrivalled knowledge of one section of a trade but are yet not conversant with other branches of it. It was therefore in practice an immense advantage to have present at the meetings of a Board a chairman who had made a special study of that trade as a whole regarded from the angle of Trade Board problems. Proposals could be taken up, explored and dropped, if likely to prove unsound, before they had been tried and found wanting.

It is difficult to see how the present chairman and Appointed Members can possibly keep themselves so well informed as did their predecessors—and it appears that any difficulties or anomalies which arise from the application of the Boards' determinations, can now only be discovered after the event, and their removal, if necessary, must be undertaken at the instance of the Ministry of Labour.

Perhaps I might be allowed to give an example which illustrates very clearly how the old system worked:—

In 1913, the Ready-made and Wholesale Bespoke Tailoring Board intended to follow in the steps of the Chain and Lace Finishing Trade Boards and to fix general minimum piece rates for certain processes.

They referred the matter to a sub-committee to draft a proposal. It was proposed to deal first with the cheapest qualities of work and to consider general minimum piece rates for the shipping trade only. Accordingly the Committee included heads of prominent firms engaged in the shipping trade. The members of the committee agreed to make enquiries and give details of the lowest piece rates customary in their districts, and to furnish evidence of the yield per hour. Meanwhile the chairman instructed an investigating officer to make an enquiry on the same lines over a wider area and to report to him personally. The result of the investigating officer's enquiry was negative. It disclosed the existence of an almost infinite variation in the quality of garments and in the method of sub-dividing the processes of manufacture.

This report was not in the least what had been expected by the chairman, who then examined personally all the evidence on which it was based.

At the meeting of the committee the members discussed proposals for specific piece rates for some time without making much progress, since each had evidently in mind only the type of trade done in their own district. Finally the chairman informed the Committee that he had ordered an inquiry over a wide field, and laid before the Committee the investigating officer's report and a summary of the evidence on which it was based. The result was that the attempt to fix general minimum piece rates in that trade was abandoned.

Under the existing machinery it is probable that in like circumstances general minimum piece rates would have been fixed, possibly by the intervention of the Appointed Members. The result would undoubtedly have been that many workers on higher qualities of goods would have failed to earn from the general minimum piece rate the equivalent of the minimum time rate and that workers on goods of the lowest quality would have been thrown out of employment altogether and their markets lost to foreign

competitors. These results would have been quickly discovered by the staff engaged upon enforcement but only after the effects had been felt; and the remedy would presumably lie in the hands of the Boards, but after receiving representations on the subject from the Ministry.

Turning to the current popular criticisms of the Trade Boards Acts, to the effect that they shackle industry and increase unemployment, I cannot help thinking that they are in some measure due to the loss of elasticity which has undoubtedly occurred during the last two or three years. Remembering again the immense variety and complexity of industry, I think that departure from the simplicity of a general minimum time rate, and the piece rate provisions of Section 8 of the Act of 1909, is fraught with a certain amount of danger. It may so easily result in an attempt to stereotype what is really too complex to be stereotyped with safety. The result of the inelasticity so created may very easily injure certain classes of trade, and affect adversely the employment of certain workers.

It is quite clear to me from my own experience, gained in the course of my duties during 1914-1915 and 1918-1919, respectively, that the smooth transfer of workers from the production of civilian clothing of all qualities to that of khaki clothing of two qualities only, at the beginning of the war was possible owing to the elasticity of Section 8 of the Act of 1909, and that the rigidity of the Wages Temporary Regulation Act of 1918, superimposed upon the Trade Board rates in the same trades, affected adversely the smooth transfer of adult workers to civilian work in 1918-19. It will be remembered that the Women's Training Department of the Ministry of Labour existed in 1919 mainly to deal with this situation.

The Act of 1918, by providing for the guaranteed time rate for piece workers, Section 3 (1) (b) encourages Boards to make the piece-rate regulation less elastic and, where such rates are fixed, in all probability they do tend to diminish the chances of employment of workers whose standard of efficiency is either temporary or permanently below the average. Further, this rate, operating in a trade with a fairly high time rate, would lessen the mobility of experienced labour very considerably, and, in a time of re-adjustment of industry, like the present, might well hamper production on fresh lines and so increase unemployment.

With so many problems before the Boards, the presence of a permanent co-ordinating factor seems as desirable as at the outset. Nor does the large number of Boards now in being appear to present an insuperable difficulty. Whether one permanent whole-time chairman presided over a panel of deputy chairmen attending for meetings only, or whether several whole-time chairmen each presided over a number of Boards, is a matter of minor importance, provided that the principle of co-ordination between the Boards and the work of administration is maintained.

I am, my Lord,

Your Lordship's obedient Servant,

(Signed) HELEN SANDERS.

The Chairman,

The Committee of Enquiry into the working of the Trade Boards Acts.

(38)—Statement submitted by Miss Sybil Campbell, Investigating Officer, appointed under the Trade Boards Acts, 1913—1918.

MEMORANDUM ON CERTAIN FEATURES OF THE ADMINISTRATION OF THE TRADE BOARDS DURING THE PERIOD 1913-1918.

The views expressed in this memorandum are based on my experience during 1913-1918 as an "Investigating Officer in connection with Trade Boards." A short account of the work on which I was engaged during these years is attached.

At this time there were thirteen separate Trade Boards in existence, some of which were established during the period in question. Each Trade Board was presided over by the same Chairman, a full time

official, appointed originally by the Board of Trade and his appointment continued under the Ministry of Labour. The staff of Inspectors were attached to the Office of Trade Boards, were responsible to the Chairman and worked under his direction and supervision.

The Chairman had the respect and confidence of both employers, workers and appointed members on the Boards, not only because of his high personal qualifications but also because he held an important official position in the Department, he had wide experience of industrial conditions and wage regulation

and he was able to obtain first-hand information at short notice through his inspectorate. He was thus in a position to assist the various Trade Boards to deal with the difficulties and dangers inherent in the regulation of wages.

Many of the difficulties of the Trade Boards were due to the fact that the employers' representatives, although experts in their own branch of the trade did not and could not know the detail of branches other than their own. In all trades in which I inspected there were very great differences due to the different methods by which the same trade had developed and the natural desire of employers to improve their methods of organisation and to conceal them from their trade rivals.

The wide variation both in the quality of the work and the organisation and subdivision of the work made the fixing of satisfactory general minimum piece rates a matter of great difficulty since nominally the same piece rate would yield in fact very different results under different conditions.

The workers and their representatives also had a limited experience of their trade but under the 1909-1918 administration both sides of the Trade Board and the appointed members, had through the Chairman, a means of obtaining fuller information on which they could come to a decision. The Chairman could obtain information quickly through the inspectors and present it to the Boards in such a way that trade secrets were not disclosed.

In cases where there was a wide divergence between the proposals put forward by the sides of a Trade Board the work of conciliation by the Chairman was all-important so that the appointed members should if possible be able to avoid the responsibility of having to choose between two widely different proposals.

In cases where proposals were made and the same type of problem had been tried with success or failure by another Trade Board the previous experience was available.

In all these matters the Chairman was able, for the reasons I have already enumerated, to give guidance to the various Trade Boards—guidance such as no Trade Board would have accepted from anyone but its Chairman and only from him if given with great skill and tact.

No attempt was made to develop this system of administration on the same lines in order to meet the large extension of 1918. No full time Chairman was appointed after the death of Mr. Aves in 1917 and the new plan of having independent Chairmen for the Trade Boards was adopted in the early part of 1918 at a time when there was, if I remember rightly, at the headquarters of the Ministry of Labour, no official of a rank as high as that of a First Division Clerk who had any first hand experience of the administration of Trade Boards during the period 1909-1917.

I have had no first hand experience of the administration of the Trade Boards department since 1918 and it is therefore with considerable diffidence

that I venture to submit that the original system might have been retained and developed to meet the extension by appointing a full time official Chairman who would have presided at the most important meetings of the Boards and Deputy Chairmen who would have been able to relieve him of the work of attending the less important meetings. The Inspectors might have been placed under a Chief Inspector directly responsible to the Chairman. Thus would co-ordination of policy and uniformity of administration have been maintained.

By the end of 1917 it had become the established practice for inspectors to conduct their own cases in the police courts. I understand that this practice has since been changed. The choice in prosecutions of this kind lies between (1) the trained lawyer, skilled in the law but who does not know the technicalities of the trade, and who is probably feared by the workers who give evidence as much as if he were on the other side—and (2) the inspector who is familiar with the technicalities of the trade and is already known to the workers and able to question them in words they understand and who by study and experience can acquire sufficient knowledge of the law of evidence and of police court procedure to conduct prosecutions of this kind successfully.

I submit with respect that an enquiry into the results of cases conducted by Inspectors would show that the practice was thoroughly justified and should have been continued, and further that unless Inspectors are trained to know what is and is not "evidence" they cannot carry out inspection as it should be done.

(Signed) SYBIL CAMPBELL.

AN ACCOUNT OF THE WORK ON WHICH I WAS ENGAGED DURING THE FIVE YEARS 1913-1918 DURING WHICH I HELD THE APPOINTMENT OF "INVESTIGATING OFFICER IN CONNECTION WITH TRADE BOARDS."

From the spring of 1913 until the end of 1914 I was engaged at the headquarters of the Board of Trade on investigation in connection with the establishment of Trade Boards and District Trade Committees for the trades scheduled in 1913.

After December 1914 I was engaged in the office of the Trade Boards in the ordinary work of inspection in six trades. I conducted all the prosecutions in which I was concerned as an Inspector and obtained convictions in every case. These prosecutions were instituted at Newcastle-on-Tyne, Hull, Portsmouth and Southampton and in each of these towns I conducted the first prosecution instituted there under the Trade Boards Act of 1909.

During the end of 1917 and the early part of 1918 I was concerned with investigations made by the Ministry of Labour in a number of Trades with a view to ascertaining whether these trades should be brought within the scope of the Trade Boards Act.

My resignation in April 1918 was accepted by the Ministry of Labour.

(Signed) SYBIL CAMPBELL.

(39)—Statement submitted by Thomas Alexander Fyfe, Sheriff Substitute of Lanarkshire at Glasgow, Chairman of the Scottish Grocery Trade Board.

I.—THE PRINCIPLE OF MINIMUM WAGE LEGISLATION.

- (a) National minimum wage.
- (b) Legislation trade by trade.
- (c) Legislation district by district.

1. This I understand to raise the question whether the fixing of legislative enactment of (a) would be preferable to continuing the policy of (b) or (c).

2. The fixing of a national minimum wage is an alluring proposition on paper; but I fear that working it out would be very difficult, if not impracticable, without grave danger of hardship to the large majority of workers; because a national minimum wage must necessarily be a very low rate—the rate practically of the lowest class of unskilled worker. If this superseded the Trade Boards we should in the vast majority of trades be simply thrown back to what was the position before the institution of Trade Boards, and which it was the purpose of the

Trade Boards Acts to remedy. It could not be maintained, as regards three-fourths of the workers of the country, that the rate of the lowest class of worker was an appropriate minimum. It would still be necessary to fix a minimum rate for the great mass of workers in occupations which are, in varying degrees, above the lowest class. I do not think that it is practicable to supersede the Trade Board machinery by merely fixing a national minimum wage—which I take to mean a wage which would be the least that could be offered to any man or woman, for any kind of work, however humble in its character, or however unimportant to the community.

3. A national minimum might be most useful as a complement to other machinery, as, for instance, that of the Trade Boards. For some classes of workers, probably no more would be required than the national minimum. What any individual in that class would get, in excess of that minimum would then become

matter for negotiation and adjustment between employer and employee; but, meantime, the worker in every class would have the feeling of security that he could never be paid less than the statutory minimum; and every form of legislation which promotes a feeling of security in the mind of a worker is good, because, in the working class mind the overshadowing spectre always is the fear of being unemployed altogether; or the fear that, if he is employed, he may be forced by his circumstances to accept a wage which is below the subsistence level.

4. If the suggestion is that there should be a statutory minimum as a national basis, which should be the foundation upon which every wages scheme should be built, then I think the suggestion is a good one; although one cannot shut one's eyes to the difficulties attending the fixing of a national minimum, in a country like Great Britain, where the social and geographical conditions are so varied, and the industries so multifarious, and so complex.

5. If, however, the suggestion is that there should be a national minimum, and nothing else, then I do not consider it would effect the purpose of giving all workers a reasonable minimum wage, having regard to the work they do and the social circumstances in which they live. To attain this is the aim of the Trade Boards system, and the necessity for this, or some other machinery, would not be removed by merely creating a national minimum wage. Although the creation of a national minimum might be helpful as a link in the chain, it would not, of itself, be sufficient to attain the object of every worker being secured a living wage.

6. I approve of the principle (b) of legislation *trade by trade*. But one of the most serious of the many practical difficulties which confront the Trade Boards system is the defining of a "trade." In these days traders, more especially in country districts, do not confine themselves to one trade. On one shop floor there may be a grocery counter, an ironmongery counter, and a drapery counter, and probably also a dairy or a greengrocery counter. In such a shop the employees assist, indiscriminately, in the work of any department, and it becomes a conundrum to locate them under the appropriate Trade Board Orders. I know that it has been suggested, to get over this difficulty, to adopt the principle of having one Trade Board for the distributive trades generally, but personally I do not think this would be feasible. I think the remedy lies rather in the direction of more carefully considered definition in the Orders, with the adoption perhaps of a general rider clause—to be inserted in all Orders—to the effect that, where more than one class of business is conducted in a shop, it shall fall under the Trade Board Order applicable to the class of business which is the substantially predominant business. If the Trade Board scheme is to be reconsidered, I think it would be worthy of consideration whether the trade should be defined in London at the outset, as at present; and whether it might not be better to express Orders in general terms, in the first place, without detailed definition, and let it be the initial business of the Board in the district to lay a proposed definition before the Minister of Labour for his consideration. I do not indeed think that a very detailed definition is requisite at all, for, in most trades, a general definition would suffice. The detailed form is apt to give rise to anomalies. In the case of my own Board, for example, the Order embraces most wholesale and retail grocery and provision merchant's establishments. The employees of the wholesaler come under the Board, if he sells a dozen eggs, for eggs are in the wholesale schedule (II); but a retail egg merchant's establishment making a speciality of eggs, and selling them by the thousand, is exempt, merely because eggs do not happen to be included in the retail schedule (I). Again, to mention only one more of the many possibilities which lurk under detailed definitions—the man who exposes for sale 12 or more of the grocery scheduled articles is a retail grocer, who falls under the Order, whilst the man who runs a dairy or an ice-cream shop, or some other establishment, "the main or principal business" of which is not to sell the scheduled grocery articles, may do quite a large business (in competition with the

grocer) in selling 11 of the scheduled articles, and yet not come under the Grocery Order. Of course one knows that, in introducing any new system, it is most difficult to avoid creating anomalies here and there. But, if it is in contemplation to revise the Trade Board Scheme, I refer to these things merely to illustrate my general view that the Boards might be made more useful, and would, I think, become more popular, if the machinery were made simpler and if the Orders were expressed in more flexible terms. Such minor points, however, do not affect my general view, which is that legislation should be (b) *trade by trade*.

7. I think that in some trades it might be an advantage that (c) legislation should also be district by district, provided that the districts are not geographically too small. In any geographical area which can be conceived there must inevitably be places where the conditions are special; but it would never do to set up a Board to meet every exceptional case. Any hardship which may be caused here and there is more than counterbalanced by the general advantage of having fixed conditions for the trade as a whole. It is, however, I think, worthy of consideration whether, to meet exceptional cases arising within a district, the Board's powers of exemption by permit might not with advantage be broadened. At present the only exemption power which the Trade Board has, under Section 5 (3) of the 1918 Act, is to grant an individual permit of exemption to a worker, on the ground of disability to earn the minimum wage owing to "infirmity or physical injury." But there are many other causes which may prevent a worker obtaining employment at the Board rate, and, if the Board had fuller exemption powers, they might sometimes ensure employment to a worker who would otherwise not be employed at all. I, of course, fully recognise the possibility of exemption powers being misused, but I believe that, upon the whole, the Trade Boards could be trusted to exercise such powers with discrimination.

II.—THE PRINCIPLES ON WHICH MINIMUM RATES ARE SETTLED BY TRADE BOARDS.

8. I think that the generally recognised principle upon which Trade Boards proceed is that the intention of the legislature is that every worker should get what is commonly known as a living wage, without in any way prejudicing the reasonable demand of a worker to get a higher rate of pay relative to his experience and personal capacity. But of course the working out of this principle is greatly complicated by the variety of conditions of life and of labour. What is a reasonable living wage at one point of time, and in one set of circumstances, may not be reasonable at another point of time or in another set of circumstances, and so the rate can never, of course, be permanently fixed for all time. But I think the Boards recognise the undesirability of rates being in a perpetual state of flux, and so they endeavour to forecast the future as far as possible, and to fix a rate which is at the moment perhaps somewhat lower than the immediate circumstances might warrant; but which, later on, may be perhaps somewhat higher; but which, over a period of say six months at least, may be regarded as fair.

III.—THE METHODS BY WHICH TRADE BOARD SETTLEMENTS ARE REACHED.

- (a) Influence of Appointed Members.
- (b) Votes of Appointed Members.

9. I am afraid no labour rate is ever "reached by complete agreement between employers' and workers' representatives"; and, whilst human nature remains as it is, I am afraid no rate ever will. If it could be so reached, of course there would be no need for a Trade Board or for any other machinery to fix rates. It is true, no doubt, that in the end the rates put forward by a Trade Board to the Minister for approval may, in a sense, present themselves as a result "reached by complete agreement." In the case of my own Board—the Scottish Grocery Board—we have twice been able to submit to the Minister

proposed rates, the resolution embodying which has been moved by the leading employer member of the Board, and seconded by the leading trade union member, and become the unanimous finding of the Board. But that pleasant result does not by any means infer that the employers in Scotland are not still of the opinion that the proposed rates are higher than the conditions of the grocery trade warrant; or that the grocery assistants are not still of the opinion that the rates are lower than the employee's circumstances demand. The result only shews that the members of the Scottish Grocery Trade Board are, on both sides, practical business men, of broad and enlightened outlook, who recognise that, in trade affairs, as in all the relations of life, no settlement of anything can ever give both sides exactly what they would like, and that, if "agreement" is ever to be possible, it must be on the basis of compromise. The gratifying result of unanimity on the resolution sent to the Ministry of Labour infers no more than this—that both sides recognise that the rates agreed upon are a fair compromise between the conflicting views of the two sides represented on the Board.

10. In regard to (a) the influence and (b) the votes of the Appointed Members, it is of course difficult to generalise, for much depends upon who are the Appointed Members. But what I presume the Committee desire, under Head III of their Memorandum, is that each consulted Appointed Member should give his experience of the working of his own Board, and the Committee will then consider for themselves how far that may be considered general experience. I speak on this point accordingly, only from my experience of the Scottish Grocery and Provision Trade Board, which is, I think, the largest Trade Board in Scotland; and which affects about 16,000 establishments, of which about 1,000 are wholesale warehouses, and about 15,000 are retail shops; the number of workers affected being about 60,000.

11. As regards this Grocery Board, we had some advantages which Boards perhaps may not always have. In the first place, the members were well selected. On both sides we had a body of reasonable men. The employers of course were very strong, and still are, in the opinion that the Trade Board system is not suitable at all for the distributive trades; and that the grocery trade especially is peculiarly unsuited to this machinery. But, the Government having resolved to set up a Board, they were loyally anxious to do their part as members of it to make it workable. On the other side, we were fortunate in having on the Board the best type of trade union men, with experience of the advantages of the come-and-let-us-reason-together style of conference. Perhaps also there was something in the Chairman having had not a little experience in adjusting labour friction, and in this being known to both sides. As Chairman in Scotland of Munitions Tribunals during the War; and being on the Panel of Arbiters on industrial disputes; and especially having been Chairman in 1917, for Scotland in the Labour Unrest Commission: I had come into personal contact with both employers and trade union representatives, and got to know them—we were very fortunate also in the other nominated members, for Mr. Rees had been at the Ministry and gained valuable special experience during the war, and Mrs. Hannay had a special experience of the women's aspect of questions. I think it counted for a good deal, in the result, that both sides had confidence in the Nominated Members of the Board. But, all the same, we did not reach a unanimous resolution without a rough passage. We had long sittings, and the possibility of agreement often seemed hopeless, and was only attained after prolonged and repeated conferences with the two sides, separately and together. I attribute the success of our work very largely to the fact that our "methods" were perhaps not very strictly orthodox. I discouraged speech making; and we conducted the business rather in the conversational-informal-conference form. The votes of the Appointed Members, as it happened, did not require to be exercised, but the fact that they had votes, and that they would likely vote together, was I think not without its influence.

12. On this subject of votes I do not think that the Trade Board scheme is very satisfactory. The assumption is that, if the sides are not equal in number, a certain number on the side preponderating shall refrain from voting. This practically means that the Nominated Members have the deciding vote. But the direction to equalize the numbers on each side, is, as I read it, not compulsory, but only directory. Either side appears to have the right to refuse to withdraw any of their number from the voting. In this event—all the members voting, including the Nominated Members—the decision of a meeting would appear to follow the ordinary rate of meetings, that, in the absence of special direction, the majority of those present would carry a resolution. In the event of the vote being equal, there appears to arise a deadlock, for the Chairman does not appear to have a casting vote. The direction that the sides be equalized for voting, by the surplus number not voting, seems based upon the assumption that the members on either side will always vote together. But that may not be so. In the case of the Grocery Board, it happened more than once that the members on the employers' side were more in number than the members on the workers' side. It also happened that the members on the employers' side were not unanimous in their view of the question under discussion. A difficulty then arose as to how the proportion should be arrived at which should refrain from voting. The matter was in point of fact arranged, after some trouble, in the instances I refer to, but it might not have been, and we should either have come to a deadlock, or a vote might have been taken, and a motion carried, which did not really reflect the opinion of the majority of the existing members of the Board. I think that the regulation in regard to surplus members on a side refraining from voting should either be made compulsory (in which case the Chairman would have to invest with power to decide, failing agreement, which members are to stand aside—and that would be a very uncomfortable position for the Chairman); or it should be abrogated altogether, as I personally think would be the preferable course. Persons should not accept nomination as members of a Trade Board, unless they mean to attend the Sittings. The existence of this vague direction about the surplus number on a side refraining from voting is apt to engender in the mind of a member the idea that his presence or absence is of no consequence, because the sides will be equalized if a vote has to be taken. As I have pointed out, there is no guarantee that the sides will be equalized. The objection of any one member of the Board might possibly prevent this being done. In any event, the direction about equalizing of sides for voting is bad on principle. It is not in accordance with the law or practice governing the conduct of public meetings; and as it is not compulsory, it might at any moment become inoperative. To abrogate it would, I think, conduce to every member being present, as he would know that, in the event of a vote being taken, his absence might prejudice his side.

13. Amongst the "methods" adopted by the Scottish Grocery Board one of the most useful was the appointment of a standing Committee, consisting of six members from each side, and myself as Chairman. This Committee met outside the general meetings and arranged the order of business and made recommendations, and this greatly assisted the conduct of the business of the Board and helped materially to curtail the length of the sittings. There is not perhaps any direct authority for this in the Acts or the Regulations, but we considered that any Board has inherent authority to appoint a Committee of its number to assist its work, and we adopted the form of Committee from the analogous enactment of Section 5 (3) of the 1918 Act.

IV.—THE PRESENT RATE-FIXING POWERS OF TRADE BOARDS—ARE THEY (a) ADEQUATE, (b) EXCESSIVE.

14. The statutory provisions appear to me to be adequate. I do not think they are excessive.

V.—THE SANCTIONS BEHIND TRADE BOARD RATES—
SHOULD STATE ENFORCEMENT BE (a) MAINTAINED,
(b) RESTRICTED.

15. Subject to the suggestion in paragraph 7 as to entrusting Boards with broader exemption powers, I think State enforcement should be maintained.

VI.—THE MINISTER'S POSITION AS THE RATE-CON-
FIRMING AUTHORITY.

16. The creation, supervision and making operative the resolutions of Trade Boards seem appropriately to fall within the sphere of the Minister of Labour, and as there must be some point of time at which an order is to become effective, the issuing of a confirmation order by the Minister of Labour is a convenient way of giving effect to the Trade Board's proposed rates. It is most difficult, however, to keep private for any length of time a Trade Board's proposals, and it is most desirable that, if they are to be confirmed, an order should be made without undue delay. It is a cause of much unrest amongst workers, who come to know that a Board has recommended rates which will improve their position, but they can take no benefit because the Board's resolutions have not been confirmed, the confirmation order appearing to them, naturally, a mere matter of form. Delay also tends to cause unpleasantness between employers and workers, for the workers, I am afraid, often get the idea into their minds that the employers, who have nothing to do with it, are in some way or other influencing non-confirmation of rates. There may, of course, be departmental reasons often why a confirming order is not at once issued; but the interested parties do not stop to consider that. They only regard the fact that they are not getting what it is known a Trade Board has recommended they should get. Their irritation is natural, and would be allayed perhaps if, when a reason exists for delay in issuing a confirmation order, some information thereof could be communicated to the Press.

VII.—THE NEED FOR APPOINTED MEMBERS.

- (a) Chairman.
- (b) Additional Members.
- (c) Voting powers.

17. This is a matter upon which, being myself an appointed member, I do not care to make any remark except this, that where women are interested parties, as is very largely the case in the Grocery Board, it is very much in their interest that one of the appointed members should be a lady who has wide knowledge of the conditions of female life and of female labour. Such an appointed member sits on the Scottish Grocery Board, and her assistance in the work of the Board has been very great indeed. I have already referred in paragraph 11 to the matter of voting.

VIII.—PROVISION FOR SPECIAL LOCAL CONDITIONS.

18. If the object of a Trade Board is, as I take it to be, to ensure to a worker a living wage, it seems to me to be of little consequence whether that worker is employed in a wholesale or in a retail establishment or where, geographically, he may be, and I think that multiplicity of Boards is to be deprecated.

19. So far as Scotland is concerned, I do not think any advantage is to be gained by District Committees. I know that the traders in Shetland and in some other northern districts clamour either to be exempted or to have a separate Trade Board, but I am not aware of any special conditions which warrant that demand. The employers are represented on a Board largely by Federation officials and the workers by Trade Union officials, and the circumstances of all districts are quite well known to

the Board. If the Board were fixing district rates there might be something to be said for the creation of District Committees, but the Board is fixing only *minimum* rates, and as regards a minimum rate, there is no need that I know of for anybody other than the Trade Board itself.

20. I do not think that grouping trades by districts is either necessary or feasible in Scotland. Hardship upon individual traders here and there is inevitable in any national scheme, but grouping by districts would not in my opinion tend to remedy that.

IX.—THE VALUE OF THE SPECIAL POWERS OF BOARDS
IN REGARD TO JUVENILES.

21. The powers of Section 3 (4) (b) of the 1918 Act are valuable, and the provision of Section 7 (1) is protective as regards juveniles. But the Trade Board machinery does not lend itself very readily to such things as apprenticeship schemes. Rates are fixed as a rule on a combination basis of age and experience. In the Grocery Trade Board the commencing age adopted is 16. The Board felt that under that age remuneration must be matter of arrangement between an employer and an individual boy or girl. The general experience seemed to be that a boy under 16 does not want to be a grocery apprentice, but comes into a shop as a message boy, only temporarily, to fill up a year or two till he reaches an age at which he will be accepted as an apprentice in an industrial occupation, and that, if he remains on after 16, his case is met by his coming on to the remuneration scale, and that there is no great desire for apprenticeship in the distributive trades.

X.—THE INFLUENCE OF THE WORKING OF TRADE
BOARDS ON RELATIONS BETWEEN EMPLOYERS AND
WORKERS.

22. It is probably too early yet to judge of this, but, so far as I know, the fixing of rates by Trade Boards does not affect harmonious relationship. The only class of worker who may be affected is the incompetent worker. Rates are, of course, fixed upon the assumption that if a worker is accorded a certain rate of pay he is willing and able to give the *quid pro quo* in service. If for any reason he cannot render this service, the employer can hardly be expected to keep him on and pay him the Trade Board rate, whilst he might be willing to keep him on at a less rate of pay suitable to his capacity. At certain ages also the Statutory rate may adversely affect the employment of women. If the rate for a girl of 19, for example, is 13s. and for a boy of 17 is 17s. 6d., an employer might perhaps prefer to have the year younger boy, whereas if he were not precluded, he might be willing to pay the girl, say, 16s. and keep her on. But I think that such cases will be exceptional, and, speaking generally, I do not think that the operation of Trade Boards is at all likely to disturb harmony of relationship between a fair-minded employer and a capable worker.

GENERAL OBSERVATION.

23. I am very strongly of opinion that it is no advantage to anybody concerned that a Trade Board should be a large body. The Grocery Board consists of 55 members. I think that a dozen at the most would amply cover all the interests in Scotland. I imagine that the aim was to let every district be represented. But, as a matter of fact, in these days, in the adjustment of wages scales, everybody interested is sure to be represented by some association official, and in the Grocery Board the real discussion at meetings is conducted by two or three men on either side. The machinery, as things stand, is cumbersome and unnecessarily expensive. I do not think that any interest would be neglected, although the Board was small.

(Signed) T. A. FYFE.

County Buildings, Glasgow.
10th January, 1922.

(40)—Statement submitted by the Scottish Council for Women's Trades and Union for the Abolition of Sweating.

The following statement is submitted on behalf of the Scottish Council for Women's Trades and Union for the Abolition of Sweating. The Council was established 25 years ago, and is composed of persons representing leading societies engaged in social work, members of the University, trained economists, officials of Trades Organisations, representatives of the Co-operative movement, and others. The Chairman is the Very Rev. Principal Sir George Adam Smith, D.D.

One of the Council's main objects is to investigate carefully and impartially the conditions of women and children industrially employed throughout Scotland, and to consider how legislation can be judiciously applied for the removal of such evils as may exist, and the general betterment of the workers' social and industrial conditions.

For over 15 years the Council have conducted a series of systematic inquiries into women's trades in Scotland. They have covered the major trades employing women, and a large number of subsidiary branches. A series of Reports of the Council's inquiries have been published giving wages statistics and general information on the industries covered by their investigations. These have had a wide circulation not only in Great Britain but in America and the Continent of Europe. A list is given on pp. 15-16 of the Council's Annual Report.

In making their investigations the Council have been careful to collect evidence both from workers and employers and from official sources where these were available. In the course of these inquiries several thousands of workers have been visited, mostly in their own homes. All the figures given have been carefully checked as far as possible from statements and documents on both sides, and the Council feel they may therefore be accepted as accurate.

The Council's inquiries have been specially directed to what were popularly known as the Sweated Trades, more particularly the Needlework and the Clothing Industries, and the branches of these carried on by women in their own homes.

One of the largest needlework trades employing women investigated was that of shirt-making and shirt-finishing. Certain classes of shirts were paid at 7d. and 8d. a dozen for making, and they were finished at 3d. and 4d. a dozen. It was found that with these rates, and the deductions made for thread, etc., the workers' earnings frequently ranged from 1d. to 13d. an hour. Cases were found in which the earnings fell to 3d. an hour. On one class of shirt a worker did 24 rows of feather-stitching, worked 72 buttonholes, sewed on 96 buttons, bridged 48 seams and made 96 fastenings. For this amount of work she received the sum of 1s.

In the women's underclothing trades cases of very low rates were also met with. The following case illustrates a somewhat exceptionally low rate of earnings, but is of interest as showing to what wages may fall in the absence of any form of control. A worker was found engaged in making garments on which she had to put the following work: sew 12 tucks and 10 short rows of feather-stitching; set in one piece of insertion; put on neckband (40 inches long with a centre row of feather-stitching), make and put in sleeves (putting round each a row of feather-stitching), stitch the two long side seams and hem skirt, putting in four gores. Many of these items required skilled hand-sewing. These garments were paid at 5d. each, and it took the workers nearly a day of very hard sewing to complete one of them.

Other trades in which the wages of the workers in many cases barely reached subsistence level were the cheaper class of blouse-making, finishing in ready-made tailoring, shawl fringing (specially a Scottish Industry) cap-making and finishing, and paper bag making.

The ordinary weekly wage of home workers might range from 6s. to 8s. or 9s., but as they were seldom steadily employed throughout the entire week, the total earnings frequently fell below the latter figure.

In the catalogue of the Exhibitions of Sweated Industries, organised by the Council and held in Glasgow, Edinburgh and Dundee, further details are given as to the earnings and general conditions prevailing in many of these trades previous to their inclusion under the Trade Boards Act.

At the invitation of a number of social workers and others the Council took up an inquiry into the needlework trades in Ireland. Full particulars of this are given in the Report on "Home Work in Ireland." The wages figures obtained by the Council in their pioneer inquiry in 1909 were fully corroborated by the investigations of the medical officer of health for Belfast which followed, and also by the subsequent inquiry of the small Departmental Committee appointed in 1911 to inquire into the conditions of employment in the linen and other making-up trades of the North of Ireland.

One of the outstanding features of all these industries was the absence of any standard or uniform rate of payment for the same class of work throughout the trade, and the resulting great variation in the earnings for work of the same quality and amount. In the shirt making trade for example, while the rates paid by the fair employer might allow the worker to earn a minimum of 4d. per hour, with the rates paid by other firms her earnings fell to the figures quoted. Again, one shop might pay 1s. 8d. per dozen for making pinafores, while another paid 10d. per dozen, both taking the same time, namely, 14 hours per dozen to do. Some good paying firms would give as much as 2s. 3d. per dozen, with thread supplied, for garments for which others paid only 1s. 4d. or even 1s. 2d. per dozen, and left the worker to supply her own thread. In one case a woman stated that a certain firm had offered her 10d. per dozen for garments identical with those for which another firm was at the time paying her 2s. per dozen. Further figures illustrating this point will be found in the Reports mentioned.

The Council feel it is unnecessary to emphasise the disastrous results arising to both workers and employers from the double-sided competition which prevailed in these trades. In the absence of organisation among the workers on the one side, a blind suicidal competition went on among them, in which each woman driven by hard necessity, tried to underbid her neighbour, and offered to take the work at lower and still lower rates, until in many cases earnings were crushed down below subsistence level, and the woman's wage came to be determined not by the value of the work done but by what she was willing to take for it. On the other side there was the competition of rival firms, many of them also hard driven, and each trying to produce goods at a cheaper and still cheaper rate in order to capture the market. Needless to say this system pressed heavily on the honourable firms who were anxious to continue to pay fair wages, but who through the competition of sweating firms frequently found themselves compelled to reduce their rates against their will. In proof of this it may be stated that the Council have constantly met during the course of their enquiries with a readiness on the part of many firms to co-operate with them in their efforts to ascertain facts and to check sweating, and again and again firms have stated their desire to see a Trade Board established in their own particular industry, as they felt it would be a protection both to themselves and to their workers against this irregular competition.

With the low rates of pay quoted, the worker had necessarily to work very long hours, 14 and 16 hours per day being quite a common stretch. These excessive hours naturally involved an almost entire neglect of family and domestic duties, which led to serious insanitary conditions and grave risk both to the workers and the public. In order to combat this side of the question the Council got a Bill introduced for the inspection and licensing of the home worker, which passed as an Act and greatly improved conditions.

The Council would point out that of the two direct methods for dealing with industrial evils, namely, combination or trade unionism on the part of the worker, and legislation on the part of the State, the former is, speaking generally, much weaker and more limited in women's industries than in men's.

Organisation on the part of the workers themselves to protect their labour is specially difficult to apply among women, even in the case of factory workers where they are gathered together in large compact bodies. In the case of the isolated home worker it is absolutely impracticable. For their protection, therefore, and for that of large bodies of women workers we are forced back on the other alternative—legislation on the part of the State.

The terrible state of things resulting from the unrestricted competition on the part of both workers and employers revealed by the Council's investigations has convinced them of the absolute need for securing for these helpless women through the Trade Boards Act the fixed and uniform minimum wage which they were quite unable to obtain by their own efforts.

The wages figures quoted in his statement and in the Council's published reports may now be compared with the rates established by the Trade Boards which have been set up in the various industries.

The Council are confirmed in their opinion as to the beneficial effects of the Acts by the conditions shown to obtain in industries which have not yet been brought under the Acts. Direct proof of this was furnished them about a year ago in the case of home knitted goods made by women in their own homes, where the wages of the women in some cases were found to be as low as from 1d. to 2d. an hour. Here again, according to their custom, the Council consulted the employers as well as the workers, and

found that leading firms were prepared to welcome a Trade Board as not only a practicable but a highly desirable form of protection to themselves as well as to their workers.

Recent investigations into the employment of women as ushers in picture houses have also shown not only great variation in rates of pay but also cases of extremely low wages.

In conclusion the Council wish to express their opinion that great care ought to be exercised in regard to the personnel of a Trade Board, and that in particular the official members appointed by the Ministry of Labour ought to be persons of sound judgment possessing an expert knowledge of general industrial conditions and of the trades to be regulated. While the interests of the workers must be protected, and a wage allowing a decent standard of living set up, obviously no trade must be burdened with wages rates impossible for it to bear, and some elasticity should always be allowed in the case of elderly and delicate workers, so that they may not be crushed out of the trade.

The following Resolution has been forwarded by the Council to the Minister of Labour:—

"In view of the beneficial effect which Trade Boards have had in their application to sweated and low paid industries, the Scottish Council for Women's Trades and Union for the Abolition of Sweating while recognising that in some cases the administration of the Boards may be open to revision, would strongly urge their retention by the Government as an absolutely necessary protection for large sections of women workers."

MARGARET HARDINGE IRWIN,
General Secretary, Scottish Council
for Women's Trades and Union
for the Abolition of Sweating.

Note.—A large number of letters and statements were received in addition to those printed above, and were considered by the Committee, including letters and statements from the following organisations and individuals: Chain and Anchor Manufacturers' Association; National Association of Goldsmiths; Norwich Launderers' Association; Portsmouth and District Employment Committee; Portsmouth Trades and Labour Council; The Industrial Christian Fellowship; The Young Women's Christian Association; The Middle Classes' Union; Mr. James Barbour, Bootle; Mr. W. Booth, London; Mr. J. Bunting, Swaffham; Alderman F. W. Cook, Dudley.

Appeal, see Tribunal.

Application of Trade Boards Acts :

see also Trade Boards Acts.
 Advocated and approved, *Carr*, 1072-6, 1091-5,
 1096-7; *Pollitt*, 4716-7, 4726-9.
 Advocated, except to organised trades, *Jones*
 11,145-8
 Comparison of 1909 and 1918 Acts, *Jones* p. 785-6,
 11,208-56
 Considerations, *Wolfe* ... 13,456-76
 1918 Definition satisfactory, *Mallon, Symons*,
 p. 861 (B), 12,077-81.
 Definitions of conditions should be clearer, *Jones*
 11,041-2

if 50 per cent. of trade is organised on both sides,
 not advocated, *Sir W. Henderson*
 p. 393 (18), 5478, 5483
 under 1918 Act, trades brought in could have been
 brought in under 1909 Act, *Wolfe* 579-81,
 13,117-22

Application of Trade Boards Acts—cont.

Objection to, *Cahill* p.130 (14)
Provisions of 1918 Act:

Intended to restrict powers of the Minister, *Wolfe*
13,118-9

Interpretation, *Hobhouse* p. 660, 9075-6

Reversion to 1909 Act advocated, *Ramsay* 6033-5,
6059

if 75 per cent. of trade localised in a reasonable
area, not advocated, *Sir W. Henderson*

p. 393 (18), 5478, 5484-5
to Sweated industries only, advocated, *Beck*
2432-4, 2439, 2450, 2488

TO UNORGANISED TRADES:

Advantages of, *Maxwell* 4935

Criticism, *Cahill*, p. 129 (12), 1490-4; *H. D.*
Jackson, 2529, 2531-2, 2759; *Ward*, 2959-60;

Pitman, 4352; *Campbell*, 4790, 4832-4.
Reply to criticism, *Little* p. 313

Wages should not be only test for, *Mallon* 12,081

Appointed Members, see under Constitution.

Apprenticeship:

Advantageous in highly skilled trades, *Stoker*
p. 771 (9)

Approval of, *Kay* 6331-3

Advocated in all really skilled trades, *Willis*
p. 798, 11,323-32

Articled apprentices engaged by agreement should
be exempt from Trade Board control, *Lowestoft*
employers p. 962

Central Apprenticeship Sub-Committee, *Wethered*
p. 818 (41)

Decline of, but revival of interest and importance
of, *Wethered* p. 818 (41), 11,708

Impossible in small country businesses owing to
high rates, *Reynolds* p. 974

Permits for, on individual basis might be considered.
Tillyard p. 895 (9), 12,631-7

Registration of apprentices, *Wolfe* ... 333, p. 74

SCHEMES:

Bristol, *Wethered* ... p. 818 (41), 11,708, 11,717-8

Difficulty experienced, *Tillyard* ... 12,530-5

Requirements and approval of, *Wethered*
p. 818 (41), 11,711; 11,728

should be Statutory part of Trade Board Order,
Aveling, Clark, Howling p. 255, 3217-37

of Trade Boards, *Wolfe*, 318-9, 621, p. 72-3
Willis, p. 798, 11,323; *Wethered*, pp. 818 (42),
819 (43), (44), 11,709, 11,715-7.

should not be Undertaken for at least two years
after setting up of Board and then only by
agreement, *Kay*, p. 439 (22), 6319-24.

in Various industries, *Wethered*, p. 818 (41),
11,708, 11,717-8

System would be approved, *Wilkinson* ... 7958

- Lower rates to women and opinion *re*, *Turner* 7383-7
- Lowness of, *Turner*, pp. 493, 495, 504-6, 7150-1; *Fraser*, p. 538 (15); *Burrows*, pp. 572-3, 576.
- Multiplicity of, owing to individual bargaining, *Turner* ... p. 496
- National Minimum wage:
- Advocated, *T. E. Jackson*, p. 192 (13); 2195-6, 2207-11.

Distributive Trades—cont.

WAGES—cont.

National Minimum wage—cont.

- Advocated, higher rates for certain areas to be settled by negotiation, *Wilkinson* p. 555, 7828-41, 7916-7
- Impracticability, *J. Campbell* ... 4736-46, 4750
- Settlements, staving off of, by employers on grounds that trade boards would soon operate, *Turner* ... pp. 494, 495, 500, 7339-40, 7414-22

District Committees:

- Advantage and disadvantage, *Pascall* p. 466, 6710
- Advocated and schemes, *Aveling, Clark, Howling*, p. 256; 3046-108, 3124-6, 3150-65, 3247-8, 3272-90; *Johns*, p. 336, 4415; *Robson*, p. 399 (12), 5676-85; *Crabb*, 698, 9746, 9748-50, 9752-3, 9759; *Buekle*, p. 712, 9816; *Stoker* pp. 769-770, 771 (8), 10,710-6; *Lovestoft Employers*, p. 962; *Wales and Monmouthshire National Boot Trades Federation*, p. 968; *North of Scotland Master Shoemakers' Association*, p. 969.
- not Advocated and objections to, *J. Campbell*, 4762; *Kay*, p. 440 (37), 6367; *Fraser*, p. 537 (7); *Turner*, 7216-7; *Robinson*, 7729-36; *Burrows*, 8090-3.
- Boards should have power to dissolve, *Wolfe*, 13,238; *Mallon, Symons*, p. 863, 12,231, 12,263-8.
- for Combined kindred trades in district, suggestion, *Harmer* pp. 323-4, 4077-89, 4097-102, 4112-26.
- Definition should be more elastic, and Committees could be useful if feasible, *Wethered* ... 11,563-5
- Discretionary powers in referring notices of proposals to, proposed, *Pascall* ... p. 465
- Extension would meet difficulty of representation of country or local interests, but certain disadvantages, *Wolfe* ... 786-93, 798-807
- Failure of existing committees, *Wolfe*, 195-9, 641-9, 803-7, 13,222; *Harmer*, p. 324, 4090-6. 4115; *Culross*, 4186-94; *Politt*, p. 339; *Pascall*, p. 467; *Kay*, 6179; *Conley*, 8788; *Hobhouse*, 9309-20; *Wethered*, p. 817 (57); *Mallon*, 12,259-63.
- Feasible as advisory committees, difficulty of adequate representation in country towns, *Watt* 5113-4
- Importance of, *Cahill*, p. 138 (26), 1363-70, 1438, 1444, 1479-86, 1497-8
- Increased use of, advocated, *Baillie* p. 842 (VII), 11,891-11,907
- Opposition to, by workers, *Buekpitt* p. 273, 3482
- Powers, criticism, *Cahill*, 1508-17; *Adams*, 2041-9; *Little*, p. 313, 4003-5; *Crabb*, p. 698, 9747; *Buekle*, p. 712; *Willis*, p. 797-8, 11,205; *Baillie*, p. 842 (VII), 11,889-907; *Mallon*, 12,268-9, 12,460-1.
- Procedure, proposed amendment, *Politt* ... p. 339
- Scheme of autonomous local committees, success doubted, *Wethered* ... p. 817 (37)
- Trades in which appointed, and working of, *Wolfe* 158-66, p. 68

District Meetings, proposal, *Mallon* ... 12,259-60

District Rates:

- Advocated, p. 164 B; *Johns*, p. 336, 4409-14; *Neal*, 12,802-13; *Wales and Monmouthshire National Boot Trades Federation*, p. 968; *Tucker*, p. 995.
- only Advisable in really remote place, *Maegregor* 10,958-60
- not Advocated, *Carr* ... 794-1000
- certain Anomalies and inequalities inevitable, but District Committees would reduce, *Willis* p. 797, 11,373-4
- Area rates for certain trades, proposal, *Kay* p. 440 (37), 6367
- Attitude of employers and employed, *Tillyard* p. 894 (1)
- Desirable in some trades, but should be dealt with by the Board for the whole industry on recommendations from District Committees, *Stoker* pp. 769 (1), 771 (8), 10,710-16
- Differentiation would be approved if possible, *Hobhouse* ... 9335-9

District Rates—*cont.*

Difficulties, *Hobhouse*, p. 670; *Wethered*, 11,527-65;
Mallon, 12,233-52, 12,264-7.

in Distributive trades, *see that title*.

Extension of system advocated by certain manufacturers, but not supported personally, *Carr*
 974-1002

Fixing of in certain trades, *Wolfe* 161-5, pp. 70-1
 possible Lines of differentiation, *Hobhouse*
 9321-31

IN MAKING-UP TRADES:

Differential rates may be necessary to meet local conditions, *Wethered* ... p. 817 (36)
 Question of, *Willis*, p. 798, 11,206-8, 11,517;
Wethered, p. 811 (5); *Tillyard*, p. 894, 12,483-4,
 12,487.

IN MANUFACTURING TRADES:

not Advocated, *Willis*, p. 797, 11,209, 11,307-8;
Wethered, p. 811 (5), 11,545.

Preferred to committees, *Macgregor*
 p. 779 (6), 10,942

Objections to, *Carr*, 989-98; *Gardiner*, p. 337.

POPULATION BASIS:

Criticism and industrial areas would be fairer,
Turner, 7159-61, 7166-79, 7220-5; *Hoffman*,
 7161-6.
 Proposals, *J. Campbell*, 4762-3; *Robinson*, 7737,
 7738-46; *Mallon*, 12,249-62.

Power to Boards to fix instead of establishment of
 Committees, question of, *Wolfe* ... 13,285-93

Preferable to District Committees, reasons,
Macgregor ... 10,949-52, 10,955

Undesirable except perhaps in retail distributive
 trades, *Willis* ... 795, 11,195

Domestic and Persian Roller Leather Making,
 minimum rates, *Wolfe* ... p. 104

Enforcement:

Adequate, importance of, and question of means to secure, *Wethered* ... p. 815 (23)-(25)

Board should have power to receive complaints of non-payment, *Baillie* ... p. 11,920

Close co-operation between Boards and Minister or other responsible authority advocated, *Kay* p. 440 (34), 6354

should be dealt with by Boards, *Little*, p. 312-3, 3965; *Pollitt*, p. 339; *Mallon*, 12,155-53.

Inadequacy of, and proposals, *Cahill*, p. 139 (d); *Stableforth*, 5197, 5208; *Hobhouse*, p. 667, 9255-64, 9381-95; *Crabb*, p. 699, 9763; *Sime*, 9926-32; *Stoker*, p. 771 (5); *Baillie*, p. 839-40; *Rines*, 10,479.

Inspection, *see that title*.

Legal, by penalties necessary, for all rates, *Willis* p. 796, 11,281-4

Legal proceedings, *see that title*.

OF OBLIGATORY RATES BY PROSECUTION, AND OPTIONAL RATES BY CIVIL PROCEEDINGS:

Proposal, *Baillie* ... p. 841, 11,878-88
Proposal criticised, *Mallon* 12,123-4, 12,158-70

Recommendations of Committee on Trade Boards Administration agreed with, *Wethered* p. 815 (26)

Enforcement—cont.

Secretary of Shop Committee to have right to inspect wages book, might be satisfactory, *Turner*, 7295-310, 7332-7

BY STATE:

Reasons for, and against, *Mallon*, *Symons* p. 863, 12,112-128

Retention:

Advocated, *Baillie*, p. 843 (IX), 11,918-23; *Tillyard*, p. 895 (5), 12,509; *Fyfe*, p. 1008.

Advocated, but ordinary magisterial tribunals unsuitable, *Stoker* ... p. 771 (5), 10,800-23

Statutory provisions, *Wolfe* ... p. 454, pp. 86-7 through Trade Unions, with power to prosecute, proposal, *Turner* ... p. 7290-337

Engineering, minimum rates, *Wolfe* ... p. 103

Engineering and National Employers' Federations, evidence on behalf of, *see* RAMSAY, Alexander, p. 426-7, 5999-6098; and CHANDLER, Frank H., p. 433-5, 6099-6119.

Equipment, improvement as result of trade boards, *Counsell* ... p. 914

Evasion:

Allegations of wholesale evasion not proved, *Wolfe*, 13,369, 13,370

ARREARS OF PAY DUE:

Note of, should be sent to employer as soon as possible, *Wilkinson*, p. 587, 8219.

should be paid to time rate fixed, *Baillie* 11,881-8

Procedure re, and re communication to employer, *Power* ... p. 12,643-63

in Country districts, *Scott* ... p. 5301-2

Legal proceedings, *see that title*.

Onus of proof should rest with Minister of Labour as prosecutor, *Stark* ... p. 413 (f), 5874-78

Penalties, *see that title*.

Responsibility to rest with worker would be difficult, *Loughlin* ... p. 10,579-80

by Smaller employers, *T. E. Jackson*, p. 191 (9); *Balfour*, p. 363 (12).

Ex-Service Men:

in Distributive trades, position of, and grievances, *Turner*, pp. 498, 505, 7259-63, 7388-90; *Leslie*, pp. 533, 533-4, 7526; *Burrows*, p. 575, 8069.

as Street traders in Grocery and Provision Trade, many, employees of alien capitalists, *Robson*, p. 399 (3), 5609-18

Trade Boards will militate against employment of, *Cahill* ... p. 1433-6

Exemption Permits:

Application, onus should be upon worker, *Cahill*, p. 139 (f); *Aveling*, *Clark*, *Hawling*, p. 256, 3291.

Board should have power to grant, *Pollitt*, 4664-70

Criticism of system, *Barnard* ... p. 1683

Delay in obtaining, *Adams*, 2038; *Stark*, 5910;

Chandler ... p. 435

Employers' ignorance re, *Hendry* p. 732, 10,031

EXTENSION OF POWERS re:

Advocated, *Pollitt*, 4664-70; *Stark*, p. 413 (i) 5915-17; *Crabb*, pp. 699, 9685, 622, 9628-9;

Willis, p. 798, 11,188, 11,333-8; *Power*, 12,972-7; *Fyfe*, p. 1006.

Objection to, *Mallon*, *Symons*, p. 864-5, 12,403-430

Machinery not too limited, *Dawson* p. 650 (7), 9006-7

Retrospective, desirable, *Stark* p. 413 (i), 5909-14

for Semi-efficient workers, difficulty, *Cahill* 1430-2

SLOW WORKERS:

Boards should have power to grant, *Crabb* p. 699, 9585-622, 9628-9

Power to Boards, safeguards would be necessary, *Hendry* ... p. 10,038-9

Problem of, but Administrative Committees could deal with, if given freedom, *Hobhouse* 9376-80

System, *Wolfe* 265, 270-4, 322-33, 451-2, pp. 73-4, 87

Exemption Permits—cont.

Work of inspectors in connection with, *Power* p. 903-4 (C. iii), 12,664-76, 12,935-7
 Workers over 50 should be automatically excluded, *Cahill*, p. 139 (f), 1433; *Aveling, Clark, Howling*, p. 255; *Robson*, p. 399 (10), 5878-80, 5646-8; *Leslie*, p. 534, 7544-5.

Workers over 60, advocated on application, *Johns* p. 336, 4420-6

Explosives Manufacture, minimum rates, *Wolfe* 540, p. 104

Export Packing, (London), minimum rates, *Wolfe* p. 102

Export Trade, Trade Boards in connection with, *Buckpitt*, p. 282-3, 3535, 3544-5, 3614-9, 3622-3; *Little*, 3982-3, 3987-9, 4055; *Impey*, p. 408, 5745.

Fancy Leather Goods, Rates, 1916, *Turner* p. 504

Federation of Grocers' Associations:

Constitution, *Robson* ... p. 398 (2), 5511-15
 Evidence on behalf of, see *Robson*, *Alderman Henry, J.P.* ... p. 398-400, 5507-5702

Federation of Light Clothing Manufacturers
 evidence of Mr. Herbert Kay subscribed to by, 6392

Fellmongering, minimum rates, *Wolfe* ... p. 102

Finance of Trade Boards:

Cost to nation, alleged to be excessive, *Ward*, 2949; *Shaw*, 3781-3; *Scottish Blouse, Overall and Under-clothing Manufacturers Association*, p. 973.

Cost of system should be spread over whole trade, *Macwell* ... 5083-5

heavy Expenditure incurred without corresponding advantage, *Eaton, Brodie*, p. 173 (7); *Lawrence*, 2620; *Aveling, Clerk, Howling*, p. 256, 3092, 3177-90; *Scottish Grocery Employers' Associations*, p. 978; *H. D. Jackson*, p. 983 (E).

Bearing of, by trade:
 not Agreed with, *Pollitt* ... 4714-5
 Proposal, accommodation and cost of secretarial staff being provided by State, *Johns* p. 336, 4429-36
 should be Borne by parties concerned, *Messrs. Thomas Goode* ... p. 971
 Expense of system, *Wolfe*, 529-30, pp. 98-9, 100; *Buckpitt*, p. 285; *Balfour*, p. 363 (16); *Ramsay*, p. 426 (5).

Fish and Poultry Trade, wages, 1921, *Turner* p. 509

Fishmongers, wages, etc., 1919 and at present, *Burrows* ... p. 575

Fixing and Variation of Rates:

Adoption of outside agreements, *Wolfe* ... 13,152-3
 Agitation by Unions for higher rates, *Cahill*, p. 130 (13); *Aveling, Clark, Howling*, p. 256; *Robson*, p. 400 (14).

"Agreed vote," definition, *Stoker* ... 10,850-2
 for Ancillary and auxiliary classes only, question of, *Wolfe* ... 13134-6, 13144-50

Appended workers, separate minimum for, probably necessary, *Stoker* ... 10775-7

Basis of rates, see *that title*.

Comparison of Trade Board rates, *Wolfe* 555-78, p. 105-7

Confirmation, see *that title*.

DATE OF COMING INTO OPERATION:

Agreed rates:
 should Operate immediately, *Impey*, p. 409; *Culross*, 4163-73; *Kay*, p. 439, 6212-3; *Paseall*, p. 465, 466; *Til*, 6871; *Fraser*, 7620-5, 7628.

within 14 days advocated, *Watt*, ... 5128-9

within one month advocated, *Buckpitt* pp. 274, 285, 3507

Certain dates should be fixed for, *Clark* 3263-4

Periods after decision of Board to issue proposals before rates came into operation, 1920, 21, *Wolfe* ... 369, p. 82-3

Power to Boards to name dates for rates coming into operation, question of, *Wolfe* ... 13,260-1

Fixing and Variation of Rates—cont.**DATE OF COMING INTO OPERATION—cont.**

Proposals, *Carr*, 1078, 1082, 1086-90; *Trotman*, 1131-40; *Culross*, 4156-62; *Johns*, p. 336; *Pollitt*, p. 338, 4691; *Paseall*, p. 465, 6703-6; *Jones*, p. 786 (4), 11,094-5; *Coffin Furniture Manufacturers*, p. 972; *Birmingham and District Committee of Employers and Employed*, p. 1003.

Times elapsing before first rates became binding, *Wolfe* ... 369, p. 84

Decisions, co-ordination necessary, but impossible, *Cahill* ... p. 138 (25)

DIFFERING FROM RATES AGREED OUTSIDE BOARD:
 in Excess of agreed rates in district, examples of, *H. D. Jackson* ... 2708-49, 2802-3, 2812
 Unfairness of, *Chandler* ... p. 435, 6112-19

DURATION OF RATES:

Board should fix, *Cahill* ... p. 139 (b), 1519-21
 Proposals, *Buckpitt*, p. 274; *Macgregor*, p. 779 (5), 10,929, 10,987-90; *Riskery*, p. 970.

Effect on efficiency of workers, *Robertson*, 7084-9; *Boase*, 7091-112.

Efficiency standard set up, and consequent unemployment, *H. D. Jackson* ... 2704

General tendency towards regarding Board as wage-fixing authority and not as limited to fixing minimum, *Wolfe* ... 204-13, 289

by Government Department, objections to, *Hobhouse* ... pp. 668, 669
 High grade and minimum inseparable, *Stoker* 10,784

Higher rates paid in many instances, *Ramsay* 6057

Increased rates generally paid immediately on proposal, decreased not till three months after, *Carr*, 1079-81; *Trotman*, 1131-7; *Smee*, 1193, 1231; *Eaton, Brodie*, p. 174, 1982-5; *Adams*, 2103-6; *T. H. Jackson*, 2269; *Aveling, Clark*, 3265-6; *Crosthwaite*, 5175.

Increased rates not always paid immediately, *Jones* 11,062-7

Low to start with, desirable, *Paseall* ... 6752

METHODS AND PRINCIPLES OF SETTLEMENT: *Wolfe* 654-61; *Hobhouse*, p. 661-2, p. 668, 9233-6, 9105-33; *Stoker*, p. 770 (2), 10,717-41, 10,767-7, 10,773, 1231; *Eaton, Brodie*, p. 174, 1982-5; *Adams*, 2103-6; *T. H. Jackson*, 2269; *Aveling, Clark*, 3265-6; *Crosthwaite*, 5175.

Cases of sides being pledged to vote against convictious, *Tillyard* ... p. 894-5 (3), 12,505-6

by Compromise and objection to, *Crosthwaite* 5178-80

by Mutual agreement between two sides of Board desirable, *Crabb* ... p. 698

Minimum Rates, see *that title*.

Nature of rates fixed and basis of classification of special rates, *Wolfe* ... p. 75-6

Notice of fact that Board was going to meet, question of, *Wolfe* ... 746-60, 777

Notices, see *that title*.

OBJECTIONS TO PROPOSALS:

Abolition advocated, *Buckpitt* ... p. 274, 3500-7

to Board, irrelevant and useless, in some cases, *Jones* ... 11,076-8, 11,080-2

Inadequate hearing by Board sometimes complained of, *Wolfe* ... 13,080

Objectors should be heard by Board, *Cahill* p. 139 (e), 1502-3

Period for:
 Dating of, from date of announcement of proposals in London Gazette or in public advertisement, suggestion, *Wolfe* ... 690-4, 774-6

for New rates, two months as now, advocated, *Mallon, Symons* ... p. 863, 12,270

Reduction of period for objections:
 Objected to, *Conley* ... p. 633, 8788-94

Proposals, *Smee*, 1193; *Little*, p. 312, 3924, 3928; *Culross*, 4155; *Johns*, p. 336, 4428; *Pollitt*, p. 338, 4683-5; *Stableforth*, 5225; *Stork*, 5857-9; *Turner*, 7446-6, 7465; *Fraser*,

Fixing and Variation of Rates—cont.

Period for—cont.

Reduction—cont.

p. 537 (8), 7581; *Wilkinson*, p. 555, 587, 8218; *Hoffman*, p. 602 (35), 8582; *Dawson*, p. 650 (8), 8993; *Hobhouse*, p. 669, 9456-7; *Crabb*, p. 786 (4), 11,062; *Wethered*, p. 814 (21), 11,679; *Baillie*, p. 843 (X), 11,967; *Mallon*, *Symons*, p. 864, 12,270; *Wolfe*, 13,256; *Riskery*, p. 976; *Wrought Hollow Ware Employers' Association*, p. 990; *F. G. Robinson*, p. 993.

Personal, not made at present, and need for, *Politti* p. 338, 4683-5

Power to bring variation into force without period for objections in exceptional cases, advocated, *Wethered* p. 814 (21)

Previous to fixing rates:

Advocated, *Adams* 2164-7

Question of, *Baillie* 11,964-6

Procedure in dealing with, *Wolfe* p. 79

better Provision for full consideration of required, *Aeeling*, *Clark*, *Houling* p. 256, 3354-7

Right of lodging not an absolute safeguard against fixing of too high or too low rates, *Crosthwaite* 5175-8

System necessary, but drawbacks of, *Hobhouse* 9461-6

POWERS OF BOARDS: Wolfe 229-314, p. 69-7

Adequate on the whole and not excessive, *Stoker*, p. 770 (4), 10,742; *Macgregor*, p. 779 (3); *Tillyard*, p. 895 (4), 12,507; *Fyfe*, p. 1007 (14).

should be confined to workers earning under £135 a year, *Cahill* p. 137 (24), 1398-409, 1454-6, 1487-9

Fixing of minimum to be compulsory, and of higher rates for skilled workers, not compulsory, question of, *Kay* 6374-83

General basic minimum rate only, should be fixed in first instance, *Kay* p. 439 (18), 6281-513, 6315, 6389-91

Increase advocated, *Johns* 4408

Limitation to anti-sweating minimum rate:

Advocated, *Carr*, 1003-43, 1096-101; *Eaton*, 2024, 2029; *Adams*, 2040; *Gordon*, 2176; *Ward*, 2949, 2959, 2968-9; *Aeeling*, *Clark*, *Houling*, p. 255, 3260; *Huggan*, 4451-65; *Campbell*, 4791-818; *Maxwell*, 4926-34, 5070-80; *Sir W. Henderson*, p. 393 (18), 5478; *Impey*, pp. 407, 409, 5713-21; *Stark*, 5823-36; *Ramsay*, p. 427 (12), 6094, 6068-82; *Kay*, 6389; *Pascall*, p. 466, 6633-6, 6710-21, 6733-9, 6745-7, 6756-60; *Boase*, 7052-60; *Stoker*, p. 770 (4), 10,742-99, 10,847; *Baillie*, 11,778-59; *Brush Manufacturers*, pp. 970, 971; *Messrs. Thomas Goode*, p. 971.

Objections to, *Lawrence*, 8894-951; *A. Henderson*, 9066-70; *Hobhouse*, p. 670, 9409-46, 9485-7; *Wethered*, p. 814 (18)-(20), 11,618-24, 11,637-58; *Mallon*, *Symons*, p. 862, p. 893, 12,099-128, 12,171-86; *Wolfe*, 13,123-43.

if Powers confined to, objections to system would be decreased, *T. E. Jackson*, p. 191 (7).

Moral duty of Boards considered to be to fix rates for all grades of workers, *Hobhouse* 9136-72

Order constituting Board might sub-divide classes of workers for whom rates should be fixed, *Hobhouse* 9426-7, 9434-43

Permissive powers to fix piece rates for higher workers by agreement, proposal, *Stoker*, p. 770 (4), 10,742-99, 10,847

Piece Work Rates, see that title.

Skilled Classes, Special Rates for: *Wolfe*, 262, p. 70; *Mallon*, *Symons*, p. 861, 12,058-71.

Advocated, *Little*, 3914-5; *Dawson*, p. 649 (4), 8960-3, 8966-90; *Wright*, 9011-22, 9031-2;

Fixing and Variation of Rates—cont.
